LKT Laboratories Inc. is focused on the production and distribution of high purity biochemicals for all types of life science research, including cancer biology, immunology, cardiovascular studies, microbiology, and neuroscience. Our product library includes a wide variety of compounds that can be used for a broad spectrum of in vitro and in vivo research applications.

PRICING, TERMS, AND SPECIFICATIONS

Prices and specifications shown are current at the time of printing. Prices and specifications are subject to change without notice. For the most up to date pricing, please visit lktlabs.com. All prices are in US dollars. LKT ships orders F.O.B, St. Paul, MN, USA. Payment terms for all domestic orders are net 30 days from the date of invoice. We request that all international orders be prepaid. LKT accepts Visa, Mastercard, Discover, and American Express. Sales, use, excise, and other applicable taxes will be charged.

SHIPPING INFORMATION

Products from stock will be shipped within 24 hours by the most efficient method available (generally 2 day air unless otherwise requested) upon receipt of the purchase order. Freight charges are prepaid and added to the invoice. They will be shipped using the customers own courier account (FedEx, DHL, or UPS) for express delivery.

SPECIAL HANDLING

Certain items may require special handling, packaging, or shipping (e.g. hazardous materials, dry ice shipping, etc.). In such cases extra charges must be levied to cover the costs of the specialized requirements. Items that require long-term cold storage may not necessarily be shipped on ice. Please include the name, telephone number, or fax number of the person who will be knowledgeable in handling special shipments to avoid delay in customs clearance or proper storage of the materials.

SAFE HANDLING

Many of the products offered in this catalog may still be investigational in nature or may never have been manufactured or used on a commercial scale. Therefore, many of the items may not yet have been tested for toxicological or other hazardous properties. The burden of providing adequate precautions to safeguard workers and the general public from either known or undemonstrated potential hazards of such materials rests with the user. Since most of our products are sold for research and development purposes, LKT makes the assumption that the user will take safety precautions which are appropriate to the type and quantity of material in question and which are consistent with the requirements of any regulatory agency.

USE OF PRODUCTS

LKT's products are intended solely for laboratory research purposes and are not to be used for any other purposes. Buyer acknowledges that the products have not been tested by LKT for safety or efficacy. Buyer expressly represents and warrants to LKT that Buyer will properly test, use, manufacture and market any products purchased from LKT and/or materials produced with products purchased from LKT in accordance with the

practices of a reasonable person who is an expert in the field and in strict compliance with all applicable laws and regulations, now and hereinafter enacted. Buyer has responsibility to verify the hazards and to conduct any further research necessary to learn the hazards involved in using products purchased from LKT. Buyer also has the duty to warn Buyer's customers and any auxiliary personnel (such as freight handlers, etc.) of any risks involved in using or handling the products. Buyer agrees to comply with instructions, if any, furnished by LKT relating to the use of the products and to not misuse the products in any manner. If the products purchased from LKT are to be repackaged, relabeled, or used as starting material or components of other products, Buyer will verify LKT's assay of the products. No products purchased from LKT shall be considered to be foods, drugs, medical devices, or cosmetics.

WARRANTIES AND DISCLAIMERS

LKT warrants that its products shall conform to the description of such products as provided by LKT through LKT's catalog, analytical data, or other literature. **This warranty is exclusive and LKT makes no other warranty, express or implied, including any implied warranty of merchantability or fitness for any particular purpose.**

LKT's sole and exclusive liability and Buyer's exclusive remedy with respect to products proved to LKT's satisfaction to be defective or nonconforming shall be replacement of such products without charge or refund of the purchase price, at LKT's sole discretion, upon the return of such products in accordance with LKT's instructions. LKT shall not in any event be liable for incidental, consequential, or special damages of any kind resulting from any use or failure of the products. This limitation expressly includes but is not limited to damages to a third party occasioned by such product. All claims must be brought within 60 days after receipt of the material by the Buyer, regardless of their nature.

RETURN POLICY

Contact our customer service department for a return authorization within 30 days for replacement of any product sold by LKT Labs that does not meet the standards indicated by the product specification.

Pim Kinase Inhibitors

Pim kinases are serine/threonine kinases that play a significant role in cell cycle progression and apoptosis. There are two isoforms of Pim kinase: Pim-1 and Pim-2. Both kinases are expressed in lymphoid cells and are necessary for cytokine-dependent proliferation¹.

Most research has examined the structure and function of Pim-1, although both are potentially involved in tumorigenesis. Pim-1 activates cell cycle regulator Cdc25, stimulating cell cycle progression. As a result, it may induce unchecked cell growth. Because of this role, inhibition of Pim-1 shows benefit in the treatment of various cancers.

AZD-1208 (A9708) is a Pim-1 inhibitor that induces

cell cycle arrest and apoptosis in acute myelogenous leukemia cells and inhibits phosphorylation of downstream targets such as Bcl-2, 4EBP1, p70S6K, and S6².

SMI-4a (S4932) is another Pim-1 inhibitor. This compound prevents phosphorylation of eIF4B, suppresses tumor growth, and induces cell cycle arrest and apoptosis in myeloid and lymphoid cells³.

Proteasome inhibitor **MLN-2238 (M4455)** modulates expression of tumor suppressor miR33b and down-regulates Pim-1 activity in multiple myeloma cells⁴.

Some Pim-1 kinase inhibitors induce apoptosis in leukemia cells

ALK Inhibitors

Tyrosine kinases such as anaplastic lymphoma kinase (ALK) are becoming major targets in the development of new chemotherapeutics. ALK plays an important role in the development of the brain; it also drives the progression of several cancers, including anaplastic large-cell lymphoma, neuroblastoma, and non-small cell lung cancer.

When the ALK gene is mutated or fused with other genes, it often produces extra or aberrant proteins. Overactive ALK stimulates JAK/STAT, PI3K/Akt, and ERK, promoting unregulated cell cycle progression, survival, and proliferation¹. Inhibition of ALK prevents these downstream effects, minimizing cancer cell signaling and tumor growth.

Crizotinib (C6935) is an inhibitor of ALK that also suppresses activity of ROS1 and c-MET. In cancer cells, this compound upregulates expression of

pro-apoptotic BIM and downregulates expression of anti-apoptotic survivin to induce apoptosis².

CH5424802 (C2900) targets both wild-type and mutant L1196M ALK, inducing regression of non-small cell lung cancer metastasis in the brain³.

Several new ALK inhibitors also inhibit IGF-1R, an additional target in preventing growth of non-small cell lung cancer and large-cell lymphoma cells⁴⁻⁶. Representative products that target both of these kinases include **LDK378 (L1340)**, **AZD3463 (A9600)**, and **GSK-1838705A (G7540)**.

Crizotinib binds ALK with high potency

Fluorouracil

5-Fluorouracil (F4480) is a pyrimidine nucleoside analog used to treat a wide variety of cancers. This compound inhibits thymidylate synthase, preventing the formation of dTMP from dUMP and suppressing thymidine synthesis. Without thymidine, DNA can not replicate and cells undergo a thymineless death¹⁻².

Capecitabine (C0162) and **Ftorafur (F7657)** are prodrugs of 5-fluorouracil that feature improved pharmacokinetic parameters. Other 5-fluorouracil analogs include **Carmofur (C0174)** and **Floxuridine (F4557)**.

2. Tanaka F, Fukuse T, Wada H, et al. Curr Pharm Biotechnol. 2000 Sep;1(2):137-64.

Cytarabine

Cytarabine (C9778) is a nucleoside analog of cytosine. Cytarabine is incorporated into DNA and RNA, inhibiting DNA polymerase and RNA polymerase; this also causes chain termination, preventing DNA repair and synthesis¹.

Cytarabine is clinically used to treat chronic lymphocytic leukemia, acute lymphocytic leukemia, and non-Hodgkin lymphoma². This compound is too toxic to use as an antiviral agent, but in some models it inhibits growth and replication of herpesviruses such as cytomegalovirus and varicella-zoster³.

3. Lauter CB, Bailey EJ, Lerner AM. Antimicrob Agents Chemother. 1974 Nov;6(5):598-602.

Cytarabine inhibits DNA polymerase activity

Carmustine

Carmustine (C0173) is used to treat brain cancers, lymphomas, and multiple myeloma¹⁻². This compound is a nitrosourea DNA alkylator that forms interstrand crosslinks in DNA, preventing DNA replication and transcription and inducing cell death. This compound is often administered with MGMT inhibitors such as **Lomeguatrib (L5750)** or **O⁶-Benzylguanine (B1855)**; these compounds prevent the repair of DNA, enhancing the efficacy of DNA alkylators such as carmustine.

2. Khan O and Middleton MR. Expert Opin Investig Drugs. 2007 Oct;16(10):1573-84.

Carmustine and Cyclophosphamide induce DNA strand cross links

Cyclophosphamide

Cyclophosphamide (C9609) is a commonly used nitrogen mustard DNA alkylating agent with broad application in cancer chemotherapy. Like other nitrogen mustards, this compound alkylates the N7 nitrogen of guanine bases on DNA; this causes DNA crosslinks and inhibits DNA replication and transcription¹⁻².

Cyclophosphamide is also used in clinical settings to treat autoimmune diseases such as multiple sclerosis, rheumatoid arthritis, and systemic lupus erythematosus³.

Gemcitabine Hydrochloride

Gemcitabine Hydrochloride (G1745) is a chemotherapeutic antimetabolite that demonstrates benefit in the treatment of various solid tumors such as non-small cell lung cancer (NSCLC), pancreatic cancer, ovarian cancer, bladder cancer, breast cancer, and others¹⁻⁵. Gemcitabine also treats lymphomas and esophageal cancer. This compound is often used in combination with other chemotherapeutics such as **Carboplatin (C0171)** and **Cisplatin (C3374)**.

Gemcitabine is a 2'-deoxycytidine analog that terminates DNA chain elongation and prevents replication and transcription when incorporated into DNA. Gemcitabine also inhibits the activity of ribonucleoside reductase, preventing the production

of deoxyribonucleotides and eventually inducing cellular apoptosis and death². The overall actions that gemcitabine metabolites exert on cellular regulatory processes serve to enhance the overall inhibitory activities on cell growth, a relatively rare interaction observed from other anticancer compounds known as "self-potential". Gemcitabine also induces telomere shortening by stabilizing TRF2 and displays antiviral activity against strains of HIV and feline leukemia virus⁶⁻⁷.

7. Gregory WM 3rd, Clouser CL, Patterson SE, et al. J Gen Virol. 2012 Apr;93(Pt 4):900-5.

Gemcitabine is an effective chemotherapy drug used to treat various cancers

Bleomycins

Bleomycins are glycopeptides initially produced by *Streptomyces verticillus* that exhibit potent anticancer and antibiotic activities.

Bleomycin Sulfate (B4518), a mixture of bleomycins, contains the predominant components of commercially available bleomycin. Bleomycin is used to treat several cancers, including squamous cell carcinoma, testicular cancer, and Hodgkin lymphoma; it is also a component of the ABVD chemotherapy regimen. Bleomycin causes strand breaks in DNA and prevents incorporation of thymidine into DNA¹⁻³.

Bleomycin has two primary structural domains: the bithiazole

DNA interaction site and a metal binding site¹. Bleomycin can chelate iron at the second site, generating reactive oxygen species that cause DNA degradation⁴.

Bleomycin A5 HCl (A4517) can induce two separate modes of cell death: necrosis and apoptosis. Bleomycin A5 may also potentially treat hemangioma, as it has shown benefit in cellular and animal models⁵.

5. Li P, Li DF, Guo ZT, et al. Zhonghua Kou Qiang Yi Xue Za Zhi. 2013 Jan;48(1):18-22.

Bleomycin was first produced by the bacterium Streptomyces verticillus

Curcuminoids

Curcumin (C8069) is a key component of turmeric, a member of the ginger family. Curcuminoids are responsible for the yellow color of turmeric.

Like many other plant-based phenols, curcuminoids display a range of biological activities in research models. These compounds display antioxidative, antimicrobial, and anticancer properties.

In cellular models of glioma, curcumin downregulates expression of Shh, Smo, GLI1, cyclin D1, and Bcl-2, inhibiting proliferation and migration and inducing apoptosis. Curcumin also decreases tumor volume and prolongs survival in animal models¹.

Curcumin decreases levels of NADPH-oxidase mRNA and hydrogen peroxide, decreasing oxidative stress in animal models of

exercise².

Other curcuminoids such as **Dimethoxycurcumin (D3449)** display similar biological activities with a stronger pharmacokinetic profile. This compound induces DNA damage and apoptosis in breast cancer cells³. Also, **Bisdemethoxycurcumin (B3573)** inhibits activity of DNMT1 and α -amylase and may induce phase II enzyme activation^{4,6}.

Also available: **Curcumin, high purity (C8070)**, **3,4-Difluorobenzocurcumin (D3420)**, and **Demethoxycurcumin (D1850)**.

Curcumin is a caffeic acid derivative found in turmeric

Carotenoids

Carotenoids are pigments that can be found in the chloroplasts and chromoplasts of plants, fungi, and bacteria. Structurally, carotenoids are terpenes consisting of eight isoprene units. Carotenoids typically absorb wavelengths ranging from 400-550 nanometers (violet to green light), causing them to appear red, orange, or yellow¹.

Most carotenoids are antioxidants, protecting against oxidative damage. These compounds are highly effective free radical scavengers.

Capsanthin (C0260) is a carotenoid first isolated from *Capsicum* that exhibits anticancer activity. Capsanthin inhibits TPA-induced tumor development in vitro and in vivo².

Canthaxanthin (C0168) scavenges radicals and inhibits lipid peroxidation in vitro³. In other models, this compound inhibits MCA-induced carcinogenesis⁴.

β -Carotene (C0269) is a red-orange terpene pigment that can be found in many plants and fruits; this compound is a prodrug for vitamin A. β -Carotene is used in research studies to quantify antioxidative activity. In various models, this compound also protects against DNA damage and inflammation⁵⁻⁶.

6. Di Tomo P, Canali R, Ciavardelli D, et al. Mol Nutr Food Res. 2012 Feb;56(2):217-27.

β -Carotene is a red-orange pigment that can be found in carrots, sweet potatoes, and pumpkins

Isothiocyanates

Isothiocyanates are organosulfur compounds that contain an $N=C=S$ chemical group. Some isothiocyanates are isolated from natural sources and may be metabolites of glucosinolates. In humans, intake of cruciferous vegetables such as broccoli, watercress, Brussels sprouts, radishes, and mustard is the primary dietary source of isothiocyanates¹.

Isothiocyanates are well known for their inhibition of phase I enzymes such as cytochrome P450s, which oxidize compounds and potentially produce mutagenic intermediates. Isothiocyanates also induce expression of phase II enzymes such as quinone reductase, glutathione-S-transferase, and heme oxygenase; these enzymes detoxify mutagenic intermediates, minimizing oxidative damage and inflammation.

Benzyl Isothiocyanate (BITC, B1653) and **Phenethyl Isothiocyanate (PEITC, P2508)** inhibit chemically-induced carcinogenesis in several models². BITC inhibits squamous cell carcinoma cell invasion and migration and induces apoptosis and autophagy in prostate cancer cells³. In animal models, BITC also suppresses the development of mammary gland tumors⁴.

3-Phenylpropyl Isothiocyanate (PPITC, P2515) and **4-Phenylbutyl Isothiocyanate (PBITC, P2510)** are also isothiocyanates that display anticancer benefit⁴. In animal models, PPITC decreases lung tumor formation induced by benzopyrene and NNK⁵. In similar models, PBITC exhibits chemopreventive activity, limiting the development of pancreatic dysplasia and adenocarcinoma⁶.

Studies investigating the effect of alkyl chain length of

phenylalkyl isothiocyanates on tobacco specific nitrosamine-induced lung tumorigenesis revealed that PPITC and PBITC may be some of the most effective isothiocyanates⁷.

Some isothiocyanates, such as **Phenylhexyl Isothiocyanate (PHITC, P2922)** have been shown to inhibit the activity of histone deacetylases (HDACs), likely strengthening their anticancer activity.

Other isothiocyanates include **Alysin (A4496)**, **Erucin (E6880)**, **Iberin (I0416)**, and **Iberverin (I0418)**. Like other isothiocyanates, these also induce phase II enzyme activity. Erucin inhibits telomerase, preventing growth of hepatocellular carcinoma cells; it also decreases tumor weight in models of bladder cancer⁹⁻¹⁰. In cancer cells, iberin decreases expression of cyclin-dependent kinases and induces expression of p21, inducing cell cycle arrest and apoptosis¹¹. Iberverin, a homolog of erucin, decreases expression of androgen receptors in prostate cancer cells, showing potential efficacy in the treatment of prostate cancer¹².

Also available: **R-Sulforaphane (S8046)**, **S-Sulforaphane (S8045)**, **R,S-Sulforaphane (S8044)**, **Phenylisothiocyanate (PITC, P2513)**, and many other cysteine-isothiocyanate and glutathione-isothiocyanate conjugates.

Some isothiocyanates are found in cruciferous vegetables

Sulforaphane

R-Sulforaphane (S8046) is an organosulfur compound derived from metabolism of glucoraphanin, a glucosinolate. This compound is a natural product that contains an isothiocyanate ($\text{N}=\text{C}=\text{S}$) moiety. Isothiocyanates can be found in cruciferous vegetables such as kale, broccoli, cauliflower, radish, and cabbage¹⁻³.

Sulforaphane, also known as 4-methylsulfinylbutyl isothiocyanate or (-)-1-isothiocyanato-4-(*R*)-(methylsulfinyl) butane, displays a variety of biological properties including anticancer, antimicrobial, antioxidative, anti-inflammatory, and neuroprotective activities. In cellular models, sulforaphane inhibits growth and survival of bacteria such as *Escherichia coli* and *Helicobacter pylori*⁴⁻⁵.

Synthetic **R,S-Sulforaphane (S8044)** is a racemic mixture that exhibits chemopreventive benefit, inhibiting cell proliferation and preventing tumor growth in animal models of melanoma⁶. Like other isothiocyanates, sulforaphane also induces expression and activity of phase II detoxifying enzymes such as glutathione peroxidase, quinone reductase, and glutathione-S-transferase. Phase II enzymes convert electrophiles into less toxic and more easily excretable products⁷⁻¹². The induction of phase II enzymes is mediated by MAPK signaling pathways¹². In human prostate cell lines, sulforaphane induces phase II enzyme activity and to increase the synthesis of glutathione¹³. Sulforaphane is also a strong phase I enzyme inhibitor; it inhibits

cytochromes P450 2E1 and P450 1A2, two metabolizing enzymes associated with activation of carcinogens¹⁴⁻¹⁵.

Additionally, this compound also induces expression of Nrf2, a transcription factor involved in the regulation of endogenous antioxidants. Increased expression of Nrf2 protects against oxidative damage triggered by inflammation or other injury⁶.

Sulforaphane may also indirectly inhibit histone deacetylases (HDACs) and STAT5 in vitro by downregulating their expression¹⁶⁻¹⁷. Additionally, sulforaphane also inhibits the aryl hydrocarbon receptor, a transcription factor that regulates cytochrome P450 enzymes¹⁸.

R-Sulforaphane is the naturally isolated isomer of synthetic **S-Sulforaphane (S8045)**, which exhibits similar but less potent chemopreventive and antioxidative properties¹⁹⁻²⁰.

R-Sulforaphane is isolated from broccoli

Ginsenosides

Ginseng displays many biological activities, including antioxidative, neuroprotective, and anticancer properties¹. The most commonly studied species of ginseng are *Panax ginseng* (Korean or Chinese ginseng), *Panax quinquefolius* (American ginseng,) and *Panax japonicus* (Japanese ginseng).

The active ingredients in ginseng are ginsenosides, which belong to the chemical class of compounds known as triterpene saponins. Many of these ginsenosides have been isolated and identified. Most ginsenosides can be separated into two groups: **Panaxadiols** and **Panaxatriols**. In addition to the triterpene saponins, many other active ingredients have also been identified.

Many ginsenosides display anticancer activity in cellular and animal models of cancer. **Ginsenoside Rg3** inhibits cell growth in osteosarcoma cells by inducing strand breaks in double-stranded DNA². **Ginsenoside Rh2** induces proliferation of β -cells by indirectly activating PDX-1 and Akt; it also improves glucose tolerance in animal models³. **Ginsenoside Rh2** decreases levels of amyloid- β protein in animal models of Alzheimer's disease, improving deficits in learning and memory⁴.

In adipocytes, **Ginsenoside Rb2** increases expression of SREBP and decreases levels of cholesterol and triglycerides⁵. In animal models of melanoma, this compound also suppresses neovascularization and tumor growth⁶.

Ginsenosides Rb1 and Rg1 are two triterpene saponins that are responsible for the centrally-mediated effects of ginseng. In animal models, ginsenoside Rb1 improves energy metabolism by increasing food intake, skeletal muscle ATP content, and motor activity⁷. In animal models of aging, ginsenoside Rg1 ameliorates decreases in cognitive capacity and neurogenesis and suppresses astrocyte activation and inflammatory cytokine production. This compound also increases activity of glutathione peroxidase, superoxide dismutase, and telomerase, decreasing oxidative damage⁸.

Auraptene

Auraptene (A8070) is a monoterpene coumarin that can be found in many species of citrus fruits. Auraptene displays a broad variety of biological activities, including chemopreventive, anti-inflammatory, neuroprotective, anti-parasitic, antihypertensive, and anti-diabetic properties.

In animal models of carcinogenesis, auraptene prevents the development of oral cancer. Dietary administration of auraptene reduces the frequency of tongue carcinoma induced by 4-nitroquinoline 1-oxide. This effect is likely related to the ability of auraptene to increase activity of glutathione-S-transferase and quinone reductase¹.

In a model of N-methylnitrosourea-induced mammary carcinogenesis, auraptene delays tumor formation; it

also arrests IGF-1-stimulated cell cycle progression at the S phase in breast cancer cells².

Auraptene limits LPS-induced neuro-inflammation in vivo as well. In these models, auraptene decreases activation of microglia and expression of COX-2³.

In high fat diet-fed animals, auraptene suppresses hyperlipidemia and decreases triglyceride accumulation, potentially through activation of PPAR α receptors. Administration of auraptene also improves diet-induced hyperglycemia and abnormal glucose tolerance⁴.

Auraptene decreases activation of microglia

Erucin

Erucin (E6880) is an isothiocyanate that can be found in arugula and other cruciferous vegetables. Erucin is a reduced analog of sulforaphane. Like other isothiocyanates, erucin exhibits a wide variety of biological activities in research models, including anticancer, antioxidative, chemopreventive, anti-inflammatory, and neuroprotective properties.

In cellular models, erucin suppresses benzo(a)pyrene-induced genotoxicity by inducing activity of detoxifying enzymes such as quinone reductase and glutathione-S-transferase¹⁻³. Erucin also induces apoptosis in hepatocellular carcinoma cells and decreases telomerase activity in animal models of liver cancer⁴. In breast cancer cells, erucin induces cell cycle arrest and apoptosis

by impairing microtubule dynamics⁵.

The ability of erucin to increase levels of antioxidative enzymes is also neuroprotective. Erucin suppresses 6-OHDA-induced neurotoxicity and neuronal apoptosis in cellular models of Parkinson's disease⁶.

Erucin also inhibits LPS-induced production of nitric oxide and PGE2 and expression of COX-2, IL-6, IL-1 β , and TNF- α in macrophages. In animal models, erucin suppresses formation of phorbol ester-induced ear edema⁷.

Erucin contains an N=C=S group, a feature of isothiocyanates

Indoles

Several indole-based compounds can be found in cruciferous vegetables such as cabbage, broccoli, and Brussels sprouts¹⁻². They are derived from a common parent compound, glucobrassicin. Consumption of cruciferous vegetables is linked to lower rates of cancer. Several indole compounds display anticancer properties³⁻⁴.

In models of nasopharyngeal carcinoma, **Indole-3-carbinol (I5213)** inhibits cell proliferation and decreases tumor growth⁵. Indole-3-carbinol also displays anti-metastatic activity, suppressing cell migration and invasion and decreasing ERK signaling in breast cancer cells⁶.

3,3'-Diindolylmethane (D3232) is a dimer of indole-3-carbinol. In cellular and animal models of nasopharyngeal carcinoma, 3,3'-diindolylmethane inhibits cellular invasion as well as metastasis and tumor growth;

it also suppresses activity of HDAC2⁷⁻⁸. Additionally, this compound exhibits anti-inflammatory and immunomodulatory activities. 3,3'-Diindolylmethane limits the development of experimental autoimmune encephalitis (EAE) by suppressing T cell signaling in animal models⁹.

Brassinin (B6801) inhibits DMBA-induced skin tumor formation and induces regression of mammary gland tumors¹⁰⁻¹¹.

Indoles can be isolated from many cruciferous vegetables, including cabbage

Organosulfur Compounds

Many anticancer compounds that can be found in onion and garlic are organosulfurs; these are released when the bulbs are cut and exposed to oxygen. The relationship of organosulfur compounds to cancer prevention has been the subject of several reviews¹⁻³. These compounds display efficacy in the prevention of lung, esophagus, forestomach, colon, and mammary tumors¹.

Diallyl Sulfide (D3201) decreases diethylstilbestrol-induced DNA damage and carcinogenesis in vitro and in vivo; it also inhibits the development of colon polyps in other carcinogenesis models⁴⁻⁵.

Allyl Disulfide (A4544) induces G2/M phase cell cycle arrest and apoptosis in leukemia cells⁶. Allyl disulfide also induces phase II enzyme activity⁷.

Diallyl Trisulfide (D3202) induces

phase II enzyme activity as well, increasing levels of catalase, superoxide dismutase, and glutathione peroxidase⁸. Diallyl trisulfide also suppresses histone deacetylase activity and prevents tumor growth in models of glioblastoma⁹.

Like other organosulfurs, **Dipropyl Sulfide (D3262)** induces activity of phase II enzymes¹⁰. Additionally, this compound decreases N-nitrosamine-induced DNA damage in vitro and prevents the development of benzopyrene-induced carcinogenesis in vivo¹¹.

Organosulfur compounds can be found in onions and garlic

Antiretrovirals

Antiretrovirals are antiviral compounds that are active against HIV. Antiretrovirals can be grouped into several classes, including protease inhibitors, reverse transcriptase inhibitors, and integrase inhibitors¹.

Many reverse transcriptase inhibitors are nucleoside analogs that can be incorporated into viral DNA to prevent DNA replication. **Zalcitabine (D3212)** is a pyrimidine nucleoside analog used to treat HIV². **Azidothymidine (A3212)** is a thymidine nucleoside analog; in addition to inhibiting reverse transcriptase, it also inhibits DNA polymerase³.

Lopinavir (L5682) is an inhibitor of HIV protease with anticancer activity. In meningioma cells, this compound

induces cell cycle arrest and inhibits cell growth⁴. **Indinavir Sulfate (I5313)** also shows anticancer activity, inhibiting adenocarcinoma tumor growth in vivo⁵.

Elvitegravir (E4785) is an inhibitor of HIV integrase⁶. **HCKFWW (H3275)** is a peptide inhibitor of integrase-mediated 3' processing and integration that displays activity against HIV as well as other retroviruses⁷.

HIV attacks T cells

Azole Antifungals

Azole compounds are most often used as fungicides in agriculture and as human or veterinary anti-fungal agents. These compounds display a broad range of antifungal activity, suppressing infection of plants and animals by *Aspergillus*, *Botrytis*, *Malassezia*, *Candida*, and *Alternaria*. Azole antifungals act by inhibiting the enzyme sterol 14 α -demethylase, preventing conversion of lanosterol to ergosterol. Suppressing levels of ergosterol prevents cell wall synthesis in fungi, as ergosterol is an essential component of the fungal cell wall¹.

Azoles include triazoles, thiazoles, and imidazoles.

Triazoles:

Fluconazole (F4682)
Itraconazole (I7870)
Cyproconazole (C9863)
Difenoconazole (D3320)
Epoxiconazole (E6259)
Tebuconazole (T1604)
Triticonazole (T7135)
Uniconazole (U5232)
Voriconazole (V5886)
Hexaconazole (H1992)

Imidazoles:

Ketoconazole (K1676)
Triflumizole (T6932)
Miconazole (M3309)
Tioconazole (T3357)
Clotrimazole (C4657)
Bifonazole (B3320)
Oxiconazole (O9234)
Butoconazole (B8278)
Fenticonazole (F1854)

Spores of *Alternaria alternata*, a common grain contaminant

Fluoroquinolones

Fluoroquinolones are a group of broad-spectrum antibacterials. These compounds limit DNA synthesis by inhibiting activity of bacterial DNA gyrase as well as topoisomerase IV¹⁻². Fluoroquinolones are effective against both gram positive and gram negative bacteria.

Fluoroquinolones can be classified into four generations according to antimicrobial activity³. First generation fluoroquinolones such as **Pipemidic Acid (P3461)** are mostly selective for DNA gyrase. Second generation fluoroquinolones such as **Norfloxacin (N5768)**, **Ofloxacin (O2144)**, and **Ciprofloxacin (C3262)** display improved efficacy against

gram negative bacteria. **Pazufloxacin Mesylate (P0398)**, **Sparfloxacin (S6000)**, and **Balofloxacin Dihydrate (B0246)** belong to third generation and show more significant activity against *Streptococcus*. **Clinafloxacin HCl (C4535)**, **Moxifloxacin HCl (M5794)** are fourth generation fluoroquinolones that are less susceptible to the development of resistance.

Also available: **Levofloxacin HCl (L1786)**, **Orbifloxacin (O6805)**, **Enrofloxacin (E5369)**, **Besifloxacin HCl (B1973)** and others.

Escherichia coli, a common target of antibiotics

Dihydroartemisinin

Dihydroartemisinin (A6979) is a sesquiterpene lactone that can be found in *Artemisia*. Dihydroartemisinin is the active metabolite of all artemisinin compounds; this group of products is best known for their antimalarial activity. Commercial dihydroartemisinin is used in the treatment of malaria alone or in combination with piperaquine¹. Dihydroartemisinin appears to have fewer systemic side effects than other malaria treatments, such as **Artesunate (A6982)**.

Dihydroartemisinin displays a variety of antimicrobial benefits, including anti-parasitic and antiviral activities. In addition to inhibiting growth and survival of *Plasmodium*, this compound also

inhibits proliferation of *Schistosoma*².

Dihydroartemisinin also displays anticancer activity. In colorectal cancer cells, dihydroartemisinin induces mitochondria-dependent apoptosis and increases levels of reactive oxygen species and Bax³. This compound also inhibits mTORC1 in rhabdomyosarcoma cells⁴.

Additionally, dihydroartemisinin decreases release of Th2 cytokines and infiltration of inflammatory cells in animal models of asthma, suppressing airway hyper-responsiveness⁵.

Dihydroartemisinin inhibits survival of Plasmodium falciparum

Soy Isoflavones

Many isoflavones can be found in soy, including **Genistein (G1652)** and **Daidzein (D0032)**; these compounds are also phenolic phytoestrogens. Isoflavones such as these can also be found in beans and other legumes.

Genistein induces activity of phase II enzymes such as superoxide dismutase, Nrf2, and heme oxygenase 1 in vitro¹. In animals fed a high fat diet, genistein decreases body weight, liver weight, lipid levels, and insulin dysregulation by inhibiting S6K1 signaling². In colon cancer cells, genistein induces G2/M phase cell cycle arrest and apoptosis³.

Daidzein also displays antioxidative and anticancer benefits. In vivo, daidzein increases levels of superoxide dismutase, catalase, glutathione peroxidase, and glutathione-S-transferase, inhibiting

DMBA-induced development of breast cancer⁴.

Biochanin A (B3358) is another soy isoflavone. In pancreatic cancer cells, this compound inhibits cellular proliferation, migration, and invasion⁵. Biochanin A also improves cognitive deficits in animal models of Alzheimer's disease⁶.

Formononetin (F5770) also exhibits antioxidative properties, increasing activity of superoxide dismutase and glutathione peroxidase in animal models of traumatic brain injury⁷.

Soybeans and other legumes are significant sources of isoflavones

Green Tea Catechins

Green tea catechins are polyphenols that can be found in green tea (*Camellia sinensis*). Green tea catechins display a variety of known biological properties, including antioxidative, antimicrobial, anticancer, and anti-inflammatory activities.

Epigallocatechin Gallate (EGCG, G6234) is a flavonoid isolated from green tea. Epigallocatechin gallate directly inhibits the aryl hydrocarbon receptor and STAT3, two activities potentially linked to its chemopreventive properties¹. In animal models of bladder cancer, this compound decreases tumor growth; in other cellular models of cancer, it indirectly inhibits EGFR and induces apoptosis²⁻³.

Catechin (C0278, 99%) is a flavonoid isolated from green tea that displays similar activities. Catechin decreases tumor number and formation in animal models of colorectal cancer⁴. This compound also increases life span in *Caenorhabditis elegans* and

inhibits MAO-B in vitro⁵.

In animal models of myocardial ischemia and reperfusion, **Epicatechin (E6231)** decreases myocardial infarct size and improves mitochondrial respiration⁶. **Epicatechin Gallate (ECG, E6232)** and **Epigallocatechin (EGC, E6233)** exhibit agonist activity at cannabinoid 1 receptors⁷. **Gallocatechin (G0243)** exhibits antiviral activity, inhibiting HIV-1 reverse transcriptase and integrase⁸. Gallocatechin also inhibits α -amylase, decreasing absorption of carbohydrates and limiting increases in blood glucose levels⁹.

Green tea contains a wide variety of catechins

7,8-Dihydroxyflavone Hydrate

7,8-Dihydroxyflavone Hydrate (D3329) is a flavone that can be found in *Godmania aesculifolia*, *Tridax procumbens*, and primula tree leaves. This compound exhibits a wide variety of biological activities in research models, including neuromodulatory, anti-obesity, antioxidative, anti-inflammatory, anti-cancer, and antihypertensive properties.

7,8-Dihydroxyflavone hydrate (DHF) is a brain-derived neurotrophic factor (BDNF) mimetic that activates TrkB receptors; it promotes synaptic plasticity and improves cognitive function in models of schizophrenia and neurodegenerative diseases such as Parkinson's disease, Alzheimer's disease, and amyotrophic lateral sclerosis (ALS)¹⁻⁴.

DHF not only prevents the induction of diet-induced obesity in animal models but also decreases adiposity, increases energy expenditure, and improves insulin sensitivity in already-obese animals⁵.

In other research models, DHF induces apoptosis and inhibits cell growth in oral squamous cell carcinoma cells⁶. This compound also protects keratinocytes against hydrogen peroxide- and UV light-induced oxidative damage⁷.

7,8-Dihydroxyflavone activates Trk receptors on neurons

Luteolin

Luteolin (L8377) is a flavone that can be found in many sources, including celery, broccoli, dandelion, thyme, rosemary, oranges, and carrots. Many flavonoids, including luteolin, have a yellow crystalline appearance.

Luteolin exhibits a broad range of biological activities, including anti-inflammatory, antihypertensive, anticancer, anti-diabetic, antioxidative, and neuromodulatory properties. This compound inhibits HSP90, IGF-1R, and phosphodiesterases 1-5; it also potentiates activity at dopamine and norepinephrine transporters¹⁻⁴.

Likely related to these targets, luteolin decreases tumor volume and weight in animal models with gastric carcinoma xenografts⁵. Luteolin also inhibits LPS-induced production of

IL-6 in the brain by suppressing phosphorylation of JNK and activation of AP-1⁶.

In animal models of diet-induced obesity, luteolin suppresses high fat diet-induced body weight gain, fat deposition, and adipocyte hypertrophy; it also improves glucose intolerance and insulin sensitivity and reduces infiltration of mast cells and macrophages as well as levels of pro-inflammatory cytokines⁷.

Luteolin features a distinctive flavone ring structure

Immunosuppressive Agents

Immunosuppressive compounds inhibit the immune response and are used to treat diseases related to autoimmunity, inflammation, and transplant rejection.

Agents such as **Rapamycin (R0161)** bind cytosolic protein FK-binding protein 12 (FKBP12), preventing it from associating with mTORC1. This inhibits the activity of IL-2, preventing activation of B and T cells and limiting the ability of the immune system to mount an effective response against non-host entities¹. As a result, rapamycin is primarily used to prevent the rejection of transplanted tissues and organs².

Tacrolimus (T0008) is used to lower transplant rejection rates by utilizing a similar mechanism of action. Tacrolimus also binds FKBP12, but interacts with and inhibits calcineurin, preventing T cell signal transduction and IL-2 production³.

Mitomycin C (M3377) is a cytostatic

DNA cross-linking agent that inhibits cell division; it suppresses proliferation of B and T cells and is used to limit cancer cell growth and prevent host reactions during eye surgeries⁴.

Dexamethasone (D1963) is a glucocorticoid (GC) receptor agonist that is used to treat inflammatory and autoimmune diseases such as rheumatoid arthritis and asthma⁵. Activation of the GC receptor stimulates a negative feedback loop that suppresses immune signaling. Also available: **Dexamethasone Sodium Phosphate (D1965)** and **Dexamethasone Acetate (D1694)**.

Immunosuppressants prevent activation of T cells

All-trans Retinol

All-trans Retinol (R1876) is a retinoic acid receptor (RAR) and retinoid X receptor (RXR) agonist and one of many forms of vitamin A. Vitamin A is an essential nutrient necessary for effective vision, skin health, and bone growth.

All-trans retinol induces cell differentiation, playing a significant role in embryonic growth and development. This compound is also used in research models to induce differentiation of stem cells to study development and function of various cell lineages¹.

The ability of all-trans retinol to induce cell differentiation shows benefit in cancer models. All-trans retinol induces differentiation of glioblastoma multiforme cancer stem cells, decreasing cancer cell migration and proliferation².

In the immune system, retinol appears to play a protective role in autoimmune diseases such as

multiple sclerosis. In animal models of experimental autoimmune encephalitis (EAE), this compound downregulates pro-inflammatory responses stimulated by Th1 and Th17 cells and reduces disease severity³.

Other retinoids available include:

All-trans Retinol, high purity (R1877)
Trans-retinoic Acid (R1870)
13-Cis Retinoic Acid (R1779)
9-Cis Retinoic Acid (R1777)
Retinyl Palmitate (R1879)
Retinyl Acetate (R1878)
N-(4-carbethoxyphenyl)retinamide (C0170)
N-(4-hydroxyphenyl)retinamide (H9613)
Etretinate (E7668)
Adapalene (A1202)
Acitretin (A0933)

All-trans retinol activates retinoid X receptors

Cathepsin K Inhibitors

Cathepsin K is a lysosomal cysteine protease involved in bone remodeling and resorption. Cathepsin K is produced by osteoclasts and secreted to break down bone and cartilage by catabolizing elastin, collagen, and gelatin¹. This protease plays a major role in the development of osteoporosis.

Osteoporosis is a bone disease characterized by decreased bone density and increased risk of fracture or breakage. Under normal conditions, bone mass undergoes remodeling continually by osteoclasts, which degrade the bone matrix, and osteoblasts, which rebuild the bone matrix.

Osteoclasts are activated by a number of signaling mediators from NF- κ B, Wnt, and eicosanoid pathways². These

are all involved in several signaling pathways, making them poor targets in the treatment of osteoporosis. Because the primary role of cathepsin K is in the management of bone remodeling and it is highly localized in osteoclasts, it makes an excellent target for bone disease management.

Cathepsin K inhibitors such as **Odanacatib (O1200)** and **Balicatib (B0245)** increase bone mineral density and formation rates and decrease bone resorption, protecting against the development of osteoporosis-related bone fractures³⁻⁵.

Osteoporosis (right) involves the degradation of normal bone structure (left)

Toll-like Receptor Modulators

Toll-like receptors (TLRs) are pattern recognition receptors expressed in immune cells such as macrophages and dendritic cells; they play a significant role in the development of the innate immune response.

These receptors recognize structurally conserved molecules shared by classes of pathogens. These structures are referred to as pathogen-associated molecular patterns. Although associated with pathogens, some structures can also be found endogenously. There are 11 isoforms of TLRs, and each recognizes distinct ligands, including single-stranded RNA, double-stranded RNA, lipopolysaccharides, CpG DNA, and bacterial peptidoglycans¹.

TLRs are involved in propagation of signals for inflammation, phagocytosis, antigen presentation, and other immune responses, making them good targets for compounds that regulate inflammation, allergic reactions, and autoimmune

diseases.

VGX-1027 (V2792) is an inhibitor of TLR4, a receptor that recognizes many endogenous structures. This compound inhibits antigen presentation in models of systemic lupus erythematosus².

TLR7 and TLR8 recognize viral RNA sequences. **Imiquimod (I5034)** is an agonist at these receptors, stimulating a Th1-based immune response against Japanese encephalitis virus³.

Limonin (L3550) is a natural product isolated from citrus fruits that down-regulates expression of TLR2 and TLR4, suppressing pro-inflammatory cytokine release⁴.

4. Mahmoud MF, Gamal S, El-Fayoumi HM. 2014 Oct 5;740:676-82.

Some toll-like receptors can recognize double-stranded RNA

Aflatoxins

Aflatoxins are mycotoxins initially produced by *Aspergillus flavus* and *Aspergillus parasiticus*. These toxins often occur in poorly stored grains and nuts. Commercially, aflatoxins have been found in peanut butter and various cooking oils. Aflatoxins are highly cytotoxic and carcinogenic; with chronic exposure, cirrhosis of the liver and hepatocellular carcinoma may develop¹. Aflatoxins form DNA adducts, preventing replication of DNA and inducing cell cycle arrest.

Aflatoxin M1 (A2052) and **Aflatoxin M2 (A2054)** are hydroxylated metabolites of **Aflatoxin B1 (A2044)** and **Aflatoxin B2 (A2046)** produced by metabolic enzymes in the liver².

Aflatoxin B1 is considered the most cytotoxic of all aflatoxins as it is skin-permeable, highlighting potential risk for agricultural workers exposed to contaminated harvests³. Additionally, aflatoxin B1 displays immunosuppressive activity, inhibiting humoral and cell-mediated immune responses⁴.

Also available: **Aflatoxicol (A2244)**, **Aflatoxin G1 (A2048)**, and **Aflatoxin G2 (A2050)**.

Some aflatoxins are produced by *Aspergillus flavus*

Trichothecene Mycotoxins

Trichothecene mycotoxins were first produced by various species of *Fusarium*, *Trichoderma*, *Myrothecium*, *Trichothecium*, *Cephalosporium*, *Verticimonosporium*, and *Stachybotrys*.

These toxins can be found in grains used in cereals and livestock feed. Trichothecenes can be absorbed through the skin as well as in the intestinal mucosa, making them highly toxic. Unlike many other toxins, this group of compounds does not require metabolic activation to exert biological activity. These mycotoxins bind ribosomes and inhibit protein synthesis¹.

Type A trichothecenes, including **T-2 Toxin (T0002)**, **HT-2 Toxin (T7676)**, and **Diacetoxyscirpenol (D3200)**, are more potent than type B trichothecenes such as **15-Acetyl-deoxynivalenol (D1761)**, **Nivalenol (N3584)**, **3-Acetyl-deoxynivalenol (D1760)**, and **Deoxynivalenol (D1759)**.

Interest in trichothecene toxins is on the rise as new studies are published examining the abilities of these compounds to impair the immune response, disrupt oocyte maturation, and inhibit production of hormones such as growth hormone and testosterone²⁻⁵. Other research highlights the high frequency with which trichothecenes contaminate grain products; in some studies, up to 80% of grain samples exhibit trichothecene contamination⁶.

Also available: **Neosolaniol (N1858)**, **15-Acetoxyscirpenol (A0818)**, **T2 Triol (T0004)**, **Fusarenol X (F8272)**, and **T2 Tetraol (T0003)**.

Trichothecene mycotoxins are present in grains such as wheat

Marine Toxins

Many microorganisms produce toxins capable of causing disease through interaction with biological macromolecules such as enzymes or cellular receptors. Marine organisms such as algae and sea sponges produce a wide variety of toxins, some of which are responsible for shellfish poisoning.

12-Desmethyl Spirolide C (S6236) is a cyclic imine marine toxin produced by species of the dinoflagellate *Alexandrium*; this compound blocks nicotinic acetylcholine receptors (nAChRs), inducing neuromuscular block and muscle paralysis¹.

Microcystin LR (M3406) is a cyclic heptapeptide produced by species of cyanobacteria *Microcystis*; like other cyanotoxins, microcystin LR inhibits serine phosphatases PP1 and PP2A².

Another inhibitor of serine phosphatases is **Okadaic Acid (O4101)**, a neurotoxin that is also produced by dinoflagellates and sea sponges³.

α -Conotoxin GI (C5655) is a toxin produced by sea snails that inhibits nAChRs. This peptide binds nAChRs at $\alpha\gamma$ and $\alpha\delta$ interfaces, inhibiting signaling at the neuromuscular junction and inducing muscle paralysis⁴.

Microginins such as **Microginin 527 (M3208)**, **Microginin 690 (M3210)**, and **Microginin 704 (M3212)** are inhibitors of protein phosphatases and are produced by species of cyanobacteria *Microcystis*. These compounds also inhibit leucine aminopeptidase and angiotensin-converting enzyme (ACE)⁵.

Brevetoxins are lipid-soluble polyether neurotoxins produced by the dinoflagellate

Karenia. Brevetoxins act as sodium channel agonists, binding neurotoxin site 5 on Nav1.4 and Nav1.5 voltage-gated sodium channels in skeletal muscle and cardiac tissue⁶. This action opens the channels, resulting in bronchoconstriction and airway inflammation in vivo⁷. **Brevetoxin 2 (B6917)** and **Brevetoxin 3 (B6918)** are likely a cause of neurotoxic shellfish poisoning.

Oscillamide Y (O7213) is a marine toxin isolated from species of the cyanobacterium *Planktothrix (Oscillatoria)*. Like microcystins, this toxin is also a cyclic peptide that inhibits protein phosphatases such as PP1 and PP2A⁸.

Anabaenopeptins are cyclopentapeptides isolated from cyanobacteria such as *Microcystis aeruginosa* and *Oscillatoria agardhii*. Like other cyanotoxins, anabaenopeptins are typically inhibitors of serine proteases and protein phosphatases⁹. Anabaenopeptins may also inhibit carboxypeptidases. **Anabaenopeptin B (A5201)** and **Anabaenopeptin F (A5203)** are considered "nontoxic" variants.

Also available: other **Microcystins**, **Anabaenopeptins**, **Oscilloginins**, **Aeruginosamides**, **Cyanopeptolins**, and **Microginins**.

Microcystis aeruginosa, a source of many marine toxins

Sodium Channel Modulators

Sodium channels are transmembrane ion channels. The majority of sodium channels are voltage-gated channels involved in propagation of action potentials. In response to electrical current, activation gates open and sodium ions flow into the cell; this increases membrane voltage, forming the start of an action potential.

Sodium channels are found primarily on neurons, cardiac myocytes, gastrointestinal smooth muscle cells, and skeletal muscle cells¹. Mutations or other alterations in sodium channels are associated with epilepsy, seizures, pain, and cardiac arrhythmia.

Aconitine (A0958) is a toxin that can be found in *Aconitum* that binds neurotoxin binding site 2 of sodium channels. This prevents

Aconitine is a sodium channel modulator found in Aconitum

channel closure, allowing continual depolarization and eventually paralysis³.

Sodium channel blockers such as **Proxymetacaine HCl (P7059)** and **Propofol (P6870)** are often clinically used as anesthetics³⁻⁴.

Duloxetine HCl (D8145), a serotonin-norepinephrine reuptake inhibitor, exhibits benefit as a potential treatment for neuropathy and fibromyalgia. This activity is likely due to its ability to block voltage-gated Na⁺ 1.7 sodium channels, which are involved in fibromyalgia and pain signaling⁵.

Levetiracetam

Levetiracetam (L1784) is the S-enantiomer of etiracetam; it is used as an anticonvulsant in the prevention of seizures and epilepsy. Levetiracetam also exhibits potential as a treatment for other psychiatric and neurological disorders, including anxiety disorder, autism, and Tourette syndrome¹.

Levetiracetam alters calcium signaling, although it does not directly interact with calcium channels. Instead, this compound binds a particular synaptic vesicle glycoprotein (SV2A) common to all synaptic and endocrine vesicles². SV2A plays a role in calcium-induced vesicle fusion, action potential proliferation, normal CNS function, and survival. Altering SV2A function suppresses presynaptic calcium

release, reduces excitatory postsynaptic potentials, and inhibits synaptic transmission³. This also alters synaptic release of neurotransmitters and other signaling molecules.

Levetiracetam also exhibits activity in models of Alzheimer's disease. Administration of levetiracetam reverses behavioral abnormalities, synaptic dysfunction, hippocampal remodeling, and learning and memory deficits in animal models⁴.

Synaptic vesicles help transmit signals across synapses

Antidepressants

Antidepressants are clinically used to treat major depressive disorder; they can be grouped in several categories by their mechanism of action: selective serotonin reuptake inhibitors (SSRIs) inhibit the serotonin transporter (SERT), serotonin-norepinephrine reuptake inhibitors (SNRIs) inhibit SERT and the norepinephrine transporter (NET), monoamine oxidase inhibitors (MAOIs) inhibit monoamine oxidase (MAO), and tricyclic antidepressants (TCAs) typically inhibit SERT, NET, and various serotonin receptors.

In addition to its antidepressant activity, **Fluoxetine HCl (F4780)** also increases abstinence rates in former heroin-dependent subjects when combined with naltrexone versus naltrexone alone¹. **Paroxetine HCl (P0297)** decreases amyloid- β levels when

administered to subjects with Alzheimer's disease².

Amitriptyline HCl (A5235) is a TCA that increases neurite outgrowth and decreases cell death in neurons³. **Moclobemide (M5610)** displays similar neuroprotective activity, inducing hippocampal neurogenesis and increasing progenitor cell proliferation and expression of BDNF in vitro⁴.

Venlafaxine HCl (V1854) inhibits SERT, NET, and MAO. This compound also improves cognitive performance and decreases oxidative stress parameters in animal models of Huntington's disease⁵.

There are many different antidepressants, all targeting different receptors and enzymes

TRP Channel Modulators

Transient receptor potential (TRP) channels are ion channels located on the plasma membrane of many different cell types. TRP channels play a significant role in sensory transduction, pain signal relay, temperature, taste, and pressure.

TRP vanilloid (TRPV) channels are the most well-studied of these channels. **Capsaicin (C0266)** and **Piperine (P3465)** are TRPV channel activators that can be found in plant sources and are responsible for the hot or spicy flavor of some peppers¹.

TRP canonical (TRPC) channels are often found on cardiomyocytes and nerves; TRPC channels play a role in cardiac hypertrophy². Amyotrophic lateral sclerosis (ALS) treatment **Riluzole (R3347)** activates TRPC5 channels. **Clemizole (C4417)**, an NS4B and histamine receptor blocker, inhibits TRPC5 channels, potentially regulating neurite length³.

TRP melastatin-like (TRPM) channels are involved in temperature and taste transduction as well as cell adhesion. **Ginsenoside**

Rd (G3456) inhibits TRPM7 channels and **Pregnenolone (P7023)** activates TRPM3 channels^{4,5}. **Iceilin (I0933)** activates TRPM8 channels and inhibits TRPV3 channels, acting as a cooling agent⁶.

TRP ankyrin (TRPA) channels are mechanical stress sensors expressed in the spinal cord and on hair cells. Activators of TRPA channels include **1'-Acetoxychavicol Acetate (A0817)**, **Parthenolide (P0270)**, and **Etodolac (E7556)**⁷⁻⁹.

Other TRP channels include TRP polycystin (TRPP) channels and TRP mucolipin (TRPML) channels.

TRP channels were initially discovered in Drosophila

Fluoxetine Hydrochloride

Selective serotonin reuptake inhibitors (SSRIs) are antidepressants. These compounds increase central serotonin levels by blocking serotonin transporters (SERTs); this increase in extracellular serotonin activates serotonin receptors. Serotonin is a neurotransmitter that plays a key role in mood, arousal, learning, and cardiovascular function. **Fluoxetine HCl (F4780)** is one SSRI that is commonly used to treat a wide variety of mood disorders.

Fluoxetine also boosts extracellular concentrations of norepinephrine as well as dopamine in the prefrontal cortex of animal models¹. Fluoxetine inhibits SERT, acts as an antagonist at 5-HT_{2A/2C} receptors, and acts as an agonist at α_1 receptors²⁻³.

SSRIs such as fluoxetine also display analgesic activity. Systemic administration of fluoxetine inhibits nociception in animals undergoing tail immersion and hot plate assays⁴. Fluoxetine-induced antinociception likely involves both central opioid as well as serotonergic pathways⁵. This compound's ability to indirectly modulate opioid signaling also suggests potential efficacy as a heroin relapse prevention agent⁶.

Fluoxetine is a commonly used antidepressant

LRRK2 Inhibitors

Leucine-rich repeat kinase 2 (LRRK2) is a protein that can be found in the cytoplasm and the mitochondrial outer membrane.

LRRK2 gain-of-function mutants are associated with increased risk for Parkinson's disease as well as Crohn's disease. Research models of Parkinson's disease show that LRRK2 mutations affect vesicular trafficking, autophagy, protein synthesis, and cytoskeletal function¹. LRRK2 interacts with Parkin, one component of a multi-protein E3 ubiquitin ligase complex involved in protein degradation; mutant forms of Parkin are associated with the development of a juvenile familial form of Parkinson's disease².

Expression of LRRK2 mutants results in shortening of dendrites in neurons in vitro³.

Inhibition of LRRK2 suppresses its kinase activity, lessening pathologies associated with Parkinson's disease in cellular and animal models.

PF-06447475 (P2100) prevents α -synuclein-induced neurodegeneration and neuroinflammation in animal models⁴. In vitro, **CZC-54252 (C9808)** limits mutant LRRK2-induced injury of rodent and human neurons⁵. **GNE-7915 (G5216)** is an aminopyrimidine in early stages of development that inhibits LRRK2 with high potency across several species⁶.

LRRK2 can be found in the mitochondrial outer membrane

γ -Secretase Inhibitors

γ -Secretase is a multi-subunit protein responsible for cleaving transmembrane proteins such as amyloid precursor protein and Notch. Cleavage of amyloid precursor protein eventually results in the formation of 42-amino acid peptide amyloid- β , the main component of amyloid plaques characteristic of Alzheimer's disease¹. Cleavage of Notch allows for gene transcription and other downstream signal transduction necessary for cell-cell communications involved in embryogenesis, cell differentiation, endocrine development, and potentially tumorigenesis².

In animal models of Alzheimer's disease, **LY-450139 (L9701)** prevents formation of new amyloid plaques³. Similarly,

MK-0752 (M4200) also decreases the formation of amyloid plaques; this compound displays potential as a treatment for brain and CNS-centric cancers as well⁴⁻⁵.

FLI-06 (F4432) inhibits protein secretion prior to endoplasmic reticulum exit, displaying neuroprotective benefit⁶.

Additional representative γ -secretase inhibitors include: **DAPT (D0260)** and **Deshydroxy LY-411575 (D1773)**.

Amyloid plaque formation is a feature of Alzheimer's disease

GABA Modulators

γ -Aminobutyric acid (GABA) is the primary inhibitory neurotransmitter found in the central nervous system; it plays a major role in neuronal excitability and regulates muscle tone. In vertebrates, GABA binds GABA receptors at inhibitory synapses, inducing the flow of negatively charged chloride ions into the cell or positively charged potassium ions out of the cell, inhibiting action potential propagation.

Etomidate (E7758) is a GABA-A positive modulator that is clinically used to induce short term sedation or anesthesia¹.

Flumenazil (F4681) is an antagonist at GABA-A receptors that is used as a stimulant to counteract the effects GABA-A agonists and potentiators².

(+)-Bicuculline (B3211) is another GABA-A receptor antagonist used to study regional variation of GABA receptors and their role in various disease pathologies³.

Baclofen (B0110) is a GABA derivative

that displays GABA-B agonist activity; it is occasionally used to treat spastic movement disorders but is also used in research models to study the GABA-B receptor⁴.

Gabapentin (G0106) is an analog of GABA that does not directly bind GABA receptors but indirectly potentiates GABA signaling through voltage-gated calcium channels. Like other GABA modulators, this compound is clinically used to prevent seizures and to treat neuropathic pain⁵.

Valproic Acid Sodium Salt (V0147) potentiates GABA signaling but does not act directly on GABA receptors; instead, it inhibits GABA transaminase, increasing extracellular GABA concentrations⁶.

GABA is the most common inhibitory neurotransmitter in the brain

Clopidogrel Sulfate

Clopidogrel Sulfate (C4658) is a first generation thienopyridine P2Y₁₂ receptor antagonist that is used as an antithrombotic. Clopidogrel prevents myocardial infarction and stroke in high risk subjects with coronary artery disease, peripheral vascular disease, or other cardiovascular diseases that involve narrowing of the blood vessels¹.

Clopidogrel is a prodrug; through oxidation and hydrolysis, cytochrome P2C19 produces the active metabolite. Once activated, this compound forms a disulfide bridge with the platelet ADP receptor, P2Y₁₂, preventing platelet activation and fibrin cross-linking². The P2Y₁₂

receptor is present on platelet cell membranes, where it plays a significant role in the regulation of blood clotting.

Clopidogrel is also combined with acetylsalicylic acid to prevent thrombosis in patients that have received a coronary stent; this combination decreases the risk of stent thrombosis and other cardiovascular complications³.

Additional ADP P2Y₁₂ receptor inhibitors include: **Ticlopidine HCl (T3310)**, **Prasugrel (P6903)**, and **Ticagrelor (T3200)**.

Clopidogrel reduces the risk of coronary stent thrombosis

Statins

Statins display antihyperlipidemic activity¹. Statins are commonly used in clinical settings to lower levels of low-density lipoprotein (LDL) cholesterol and to increase levels of high-density lipoprotein (HDL) cholesterol.

Statins inhibit 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-CoA) reductase, preventing the formation of cholesterol². Most circulating cholesterol stems from endogenous production rather than dietary intake, so inhibition of this enzyme can have a significant effect on plasma cholesterol levels.

Statins can be categorized into two primary groups: compounds that can be produced by plant sources and synthetic products.

Statins that can be

found naturally include: **Lovastatin (M1687)**, **Simvastatin (S3449)**, **Pravastatin Sodium (P6801)**, and **Mevastatin (M1685)**.

Statins that are produced only by synthetic means include: **Atorvastatin Calcium Trihydrate (A7658)**, **Fluvastatin Sodium (F4482)**, **Cerivastatin Sodium (C1668)**, **Rosuvastatin Calcium (R5974)**, and **Pitavastatin Calcium (P3576)**.

Many statins also exhibit anticancer activity, limiting cellular proliferation and tumor growth in preclinical models and increasing survival rates in clinical settings³⁻⁴.

Lowering cholesterol levels helps reduce the possibility of cardiovascular disease

ACE Inhibitors

Angiotensin-converting enzyme (ACE) inhibitors are commonly used to treat hypertension and congestive heart failure. ACE inhibitors block the conversion of angiotensin I to angiotensin II. Angiotensin II induces vasoconstriction, increases water retention stimulated by vasopressin, and contributes to ventricular hypertrophy; by decreasing the production of angiotensin II, these effects can be minimized. Overall, the consequences of suppressing angiotensin II production include decreasing blood pressure, reducing the progress of diabetic nephropathy, and decreasing cardiac output and stroke volume^{1,2}.

In addition to their cardiovascular activities, some ACE inhibitors have also displayed other biological activities, including anticancer

properties. **Captopril (C0261)** decreases tumor growth and metastasis in animal models of lung cancer³. **Perindopril Erbumine (P1869)** inhibits VEGF expression and tubule formation in vivo, preventing angiogenesis and tumor development⁴.

Other ACE inhibitors include: **Ramipril (R0249)**, **Temocapril HCl (T1750)**, **Trandolapril (T6803)**, **Spirapril HCl (S6168)**, **Fosinopril Sodium (F5773)**, **Lisinopril Dihydrate (L3374)**, **Quinapril HCl (Q8134)**, and **Enalapril (E5202)**.

ACE inhibitors such as Perindopril can inhibit angiogenesis

Losartan Potassium

Losartan Potassium (L5873) is clinically used to treat hypertension and to delay the progression of diabetic nephropathy; it is an angiotensin II type 1 (AT1) receptor antagonist.

Activation of the AT1 receptor induces vasoconstriction, cardiac hypertrophy, and renal sodium re-uptake; it also increases secretion of vasopressin and aldosterone. Inhibiting AT1 receptors causes vasodilation and reduces secretion of vasopressin and aldosterone¹. Together, these inhibitory effects cause a significant decrease in blood pressure.

In addition to its vasodilatory activity, losartan also prevents the endothelial-to-mesenchymal transi-

tion by indirectly suppressing ERK phosphorylation. This suggests that losartan may prevent the excessive growth and fibrosis that occurs post-myocardial infarction².

In animal models of obstructive nephropathy, losartan decreases levels of α -smooth muscle actin and collagen type 1 and inhibits phosphorylation of STAT3, suppressing renal tubular fibrosis and renal tubular cell apoptosis³.

Other AT1 antagonists include: **Irbesartan (I6804)**, **Olmesartan Medoxomil (O4549)**, **Valsartan (V0146)**, **Candesartan (C0253)**, and **Candesartan Cilexetil Ester (C0254)**.

Losartan is used for the treatment of high blood pressure

Endogenous Natriuretic Peptides

Natriuretic peptides are endogenous peptides that induce natriuresis, the excretion of sodium. Natriuretic peptides are typically found in cardiac myocytes. Here, they control water, sodium, and adipose loads and regulate blood pressure¹.

A-type Natriuretic Peptide (ANP, A7669) is a 28-amino acid peptide released from atrial myocytes that activates the guanylyl cyclase A (GC-A) receptor. Activation of this receptor decreases sodium reabsorption in the kidneys and increases cGMP levels, relaxing vascular smooth muscle. This also causes a reduction in blood volume, cardiac output, and systemic blood pressure. A-type natriuretic peptide (ANP) may also display anticancer activity, inhibiting components of the Ras-MEK-ERK signaling pathway and inducing cell death and tumor regression in various cancer models².

B-type Natriuretic Peptide (BNP, B5561) is a 32-amino acid peptide secreted by the ventricles of the heart. Like ANP, B-type natriuretic peptide (BNP) also binds GC-A receptors, causing natriuresis and decreasing systemic vascular resistance and blood pressure. BNP has a significantly longer half-life than ANP, so it is often used as a clinical biomarker for heart failure or renal failure³. BNP inhibits de novo collagen synthesis as well, increasing expression of matrix metalloproteinases 1, 2, and 3 in vitro and preventing ventricular remodeling⁴.

Nesiritide Acetate (N1873) is a recombinant form of BNP used to treat heart failure by decreasing blood volume and systemic

blood pressure. In animal models, nesiritide decreases inflammation and prevents cardiac remodeling⁵⁻⁶.

C-type Natriuretic Peptide (CNP, C7997) is a 22-amino acid peptide that binds guanylyl cyclase B (GC-B) receptors. C-type natriuretic peptide (CNP) does not have direct natriuretic activity. CNP instead contributes to cardiac function by playing a role in cardiac hypertrophy and remodeling⁷. In animal models, chronic administration of CNP attenuates angiotensin II-induced cardiac hypertrophy without altering systemic blood pressure⁸. This peptide also plays a role in fertility and bone growth. Activation of GC-B receptors stimulates long bone growth in animal models. Loss-of-function mutations that inhibit the ability of CNP to bind GC-B induce dwarfism and gain-of-function mutations result in an overgrowth syndrome⁹⁻¹⁰.

Additional peptides and peptide fragments for various animal models are also available:

Natriuretic peptides can help prevent ventricular hypertrophy, the thickening of the ventricle walls in the heart

Flufenamic Acid

Flufenamic Acid (F4483) belongs to the class of N-phenylanthranilic acids and is considered a non-steroidal anti-inflammatory drug (NSAID) through its ability to inhibit cyclooxygenase (COX) enzymes. Cyclooxygenase is a key enzyme in the synthesis of prostaglandins, prostacyclins, and thromboxane. Two isoforms exist: COX-1 is constitutively expressed while COX-2 expression is induced by inflammatory mediators. Flufenamic acid is a non-selective inhibitor of both COX-1 and COX-2¹.

Like most NSAIDs, flufenamic acid is used to manage pain, fever, and inflammation. In addition to its anti-inflammatory, analgesic, and antipyretic properties,

flufenamic acid also displays neuro-modulatory activity. This compound inhibits voltage-gated sodium channels, transient receptor potential C3 channels, and transient receptor potential M2 channels; it also potentiates TREK1 potassium channel signaling²⁻⁵.

Additionally, flufenamic acid is a reversible gap junction blocker that can be used to study the role of connexin 43-mediated gap junction communication in biological processes⁶.

Flufenamic acid is a non-selective COX inhibitor

Cyclooxygenase-2 Inhibitors

Cyclooxygenase-2 (COX-2) inhibitors belong to a class of nonsteroidal anti-inflammatory drugs (NSAIDs) that directly target COX-2; COX-2 is an inducible enzyme involved in signal transduction of fever, pain, and inflammation^{1,2}. COX-2 inhibitors are specific for the inducible isoform of COX and do not inhibit cyclooxygenase-1 (COX-1), a constitutively expressed isoform present throughout the body.

Blocking only COX-2 allows for a more targeted response, minimizing side effects such as gastric irritation and peptic ulceration.

COX-2 inhibitors also exhibit chemopreventive activity in research models, likely due to their ability to prevent inflammation³⁻⁴.

Representative COX-2 inhibitors:

Rofecoxib (R5722)
Valdecoxib (V0245)
Celecoxib (C1644)
Lumiracoxib (L8248)
Deracoxib (D1869)
Etoracoxib (E7858)
Parecoxib (P0369)
Niflumic Acid (N3322)
Etodolac (E7556)
Diclofenac (D3209)
Aceclofenac (A1017)
Carprofen (C0351)
Nimesulide (N3450)
Meloxicam (M1644)
Nabumetone (N0205)

COX-2 inhibitors are specific for the inducible form of cyclooxygenase

Histone Methyltransferase Inhibitors

Histone methyltransferases (HMTs) catalyze the transfer of methyl groups to lysine and arginine residues of histone proteins. This modification regulates important processes such as gene expression and cell mitosis, altering gene transcription. Abnormal activity of HMTs has been associated with some cancers, including colorectal, ovarian, and lung cancers¹.

HMT enhancer of zeste homolog 2 (EZH2) is an enzyme that acts mainly as a gene silencer, potentially preventing expression of tumor suppressor genes. **GSK126 (G7340)** is an inhibitor of EZH2 that displays anticancer activity by inhibiting cell proliferation in cellular and animal models of diffuse large B-cell lymphoma².

GSK-343 (G7442) also inhibits EZH2; this compound suppresses cell invasion and cell growth in epithelial ovarian cancer cells³.

HMT disruptor of telomeric silencing 1-like (DOT1L) also methylates lysines on histone H3, similar to EZH2. Blockade of DOT1L by **EPZ-5676 (E6398)** and **EPZ-004777 (E6298)** increases survival rates in animal models of leukemia and induces tumor regression in other animal models⁴⁻⁵.

Also available: **EPZ005687 (E6396)** and **EPZ6438 (E6397)**.

Histone methyltransferases can alter cell mitosis

Histone Deacetylase Inhibitors

Histone deacetylases (HDACs) are enzymes that remove acetyl groups from histones, allowing histones to wrap DNA more tightly, preventing transcription. Like other epigenetic enzymes, HDACs play a significant role in altering gene expression.

HDAC inhibitors such as **Valproic Acid Sodium Salt (V0147)** and **Butyric Acid Sodium Salt (B8276)** show benefit in the treatment of mood disorders and epilepsy¹⁻².

Phenylbutyrate (P2815) is an HDAC inhibitor clinically used to treat urea cycle disorders. This compound also exhibits chemotherapeutic activity, suppressing tumor growth in animal models of pancreatic cancer³⁻⁴.

Romidepsin (R5749) enhances natural killer cell cytotoxicity by increasing MIC A/B (NK ligand) expression on tumor cells in leukemia and lymphoma models⁵.

Other HDAC inhibitors that display

anticancer activity include **Tubacin (T8000)**, **Tubastatin A Hydrochloride (T8006)**, **Entinostat (E5477)**, **Belinostat (B1746)**, **LBH-589 (L0528)**, **TMP-269 (T5060)**, and **Vorinostat (V5734)**⁶⁻¹⁰.

Compounds that target class III HDACs (sirtuins) often display neuroprotective activity. Compounds in this category include **AK-7 (A4002)**, **AK-1 (A4000)**, and **SRT1720 (S7868)**.

Removal of acetyl groups allows DNA to coil around histones more tightly

Custom Synthesis and Analytical Services

LKT Laboratories offers custom synthesis and analysis to fit your needs. The LKT analytical team can offer custom analysis of your compounds using our extensive range of analytical equipment. Our experienced chemists can produce milligram to kilogram quantities of high purity products at competitive prices.

Natural Product Isolation

LKT Laboratories can isolate your natural products using high performance counter current chromatography. This separation method has the advantage of nearly 100% sample recovery, no sample degradation, and full polarity coverage in one single run. Separation scales can range from a few milligrams to several grams.

Custom Synthesis

LKT Laboratories is equipped to carry out multistep organic synthesis on a milligram to kilogram scale. We fully characterize compounds and have access to a wide variety of analytical instrumentation. Quality control is performed in-house using UHPLC, HPLC, LC/MS, GC and NMR.

We Specialize In:

- Natural Product Isolation
- Product Purification
- Total Synthesis
- Natural Product Analog Development

Analytical Services:

- UHPLC with PDA (UV-VIS) Detection
- HPLC with UV, ELSD, or Mass Spec Detection
- GC with FID
- UV Spectrophotometry
- NMR Spectroscopy
- Mass Spectroscopy

For more information on custom services or to receive a quote from LKT please contact us by phone or email:

getinfo@lktlabs.com

New: Kinase Inhibitors

Kinases are enzymes that transfer a phosphate group from ATP to a protein in a cell. These enzymes function as “on” or “off” switches in many cellular functions, including cell growth. Aberrant kinase activity or functional mutations in the enzymes can cause constitutive activation of cell growth and cell cycle pathways in cancer cells; this leads to the uncontrolled cell growth characteristic of tumors.

This faulty signaling may occur as a result of a mutation in the gene that expresses a particular kinase. In chronic myelogenous leukemia, a chromosomal translocation has been identified that creates a novel protein consisting of two fused tyrosine kinases, BCR and Abl; the kinase domains on this new protein are constitutively active. Normally, these two proteins are involved in regulation of cell differentiation, cell division, cell adhesion, and stress responses. Continuous activation of such processes leads to unregulated cell proliferation and the development of cancer.

There are nearly 100 tyrosine kinases in the human genome, many of which may be useful targets for developing new chemotherapeutics. Many kinase inhibitors inhibit serine and threonine kinases as well.

AMG-458 (A4926) is an inhibitor of c-MET that exhibits anticancer activity. AMG-458 enhances the radiosensitivity of lung adenocarcinoma cells, inducing apoptosis¹. In vivo, this compound inhibits growth of glioblastoma tumors².

LDK378 (L1340) is an anaplastic lymphoma kinase (ALK) inhibitor that shows chemotherapeutic activity in the treatment of non-small cell lung cancer (NSCLC); it also inhibits IGF-1R³.

OSI-906 (O7333) is an inhibitor of the insulin receptor (InsR) and IGF-1R that inhibits cell pro-

liferation and tumor growth in animal models of cancer⁴.

PCI-32765 (P0932) is an inhibitor of Bruton's tyrosine kinase (BTK), an enzyme that plays a significant role in B-cell malignancies, B-cell receptor signaling, and autoimmune diseases⁵. PCI-32765 also inhibits IL-2-inducible kinase⁶.

Tozasertib (T5996) is a pan-aurora kinase (AurK) inhibitor that also inhibits FMS-like tyrosine kinase 3 (FLT3) and Abl; this compound shows promise as a potential treatment for prostate cancer and acute lymphoblastic leukemia⁷.

(+)-JQ-1 (J6400) is a triazolo-thienodiazepine that inhibits BET bromodomain (BRD) proteins. JQ-1 exhibits chemotherapeutic activity in models of acute lymphoblastic leukemia; it also inhibits bromodomain testis-specific protein BRDT and chromatin remodeling during spermatogenesis, preventing sperm production⁸⁻⁹.

NVP-BHG712 (N8460) inhibits ephrin receptor EphB4, which plays a significant role in vessel development, vascular development, and tumor angiogenesis¹⁰.

ARRY-162 (A6971) is an inhibitor of MEK1/2 and ERK that exhibits anti-cancer activity, inhibiting proliferation in models of melanoma, non-small-cell lung cancer (NSCLC), head/neck cancer, and pancreatic cancer¹¹.

Kinase inhibitors can control unchecked cell growth in cancers

New: mTOR Inhibitors

Mechanistic target of rapamycin (mTOR) is a protein kinase that plays a role in cell growth, proliferation, motility, and survival. Important downstream targets of mTOR include p70S6 and eIF-4EBP; interaction of mTOR with these targets induces translation and protein synthesis¹⁻². mTOR forms two different complexes, mTORC1 and mTORC2, through the binding of various other proteins. The mTORC1 complex contains Raptor, FKBP12, and PRAS40, whereas the mTORC2 complex contains Rictor, mSIN1, and PTOR1/2.

mTOR signaling is dysregulated in several human diseases, including cancer, neurodegenerative disease, diabetes, and metabolic syndrome. mTOR inhibitors such

as **Rapamycin (R0161)** and **Everolimus (E8419)** are used as immunosuppressants, preventing transplant rejection, minimizing angiogenesis in coronary stents, and suppressing immune signaling in cancer treatment³⁻⁴.

New mTOR inhibitors such as **OSI-027 (O7332)**, **GDC-0980 (G1209)**, **GSK2126458 (G7342)**, and **INK128 (I5440)** are currently in development as cancer treatments, exhibiting anti-angiogenic, anti-metastatic, and chemotherapeutic activities in various cellular and animal models⁵.

Many mTOR inhibitors prevent binding of mTOR and FKBP12

New: Wnt Signaling Modifiers

Wnt signaling pathways play a key role in the transmittance of signals from outside of a cell through cell surface receptors to the inside of the cell. There are three pathways involved in Wnt signaling: The canonical Wnt pathway regulates gene transcription, the noncanonical pathway regulates cytoskeleton structure, and the non-canonical Wnt/calcium pathway regulates intracellular calcium signaling. Wnt signaling pathways are important in embryonic development and cell proliferation and migration.

Wnt signaling is often dysregulated in many forms of cancer. Elevated activity of the canonical Wnt pathway and increased levels of β -catenin are implicated in the development of breast cancer, colorectal cancer, and melanoma¹. New compounds display-

ing anticancer activity such as **C59 (C0800)**, **IWP-2 (I9060)**, **GDC-0449 (G1408)**, and **LGK-974 (L2540)** target overactive Wnt signaling by inhibiting positive modulators of this signaling pathway, such as PORCN or Smo²⁻⁴.

Other new Wnt signaling inhibitors include **IWP-3 (I9061)**, **JW55 (J8800)**, and **KY-02111 (K9600)**. These compounds promote differentiation of stem cells into cardiomyocytes and decrease body weight⁵⁻⁷.

Proteins involved in Wnt pathways transmit messages across cell membranes

New: PARP Inhibitors

PARP (poly [ADP-ribose] polymerase) is a family of proteins involved in DNA repair and cell death found in the cell nucleus. PARP immediately transmits a signal to DNA repair machinery such as DNA ligase and DNA polymerase in response to metabolic, chemical, or radiation-induced single-stranded DNA damage¹.

Several forms of cancer are highly dependent upon PARP due to their lack of other DNA repair mechanisms. PARP can also stimulate the repair of DNA breaks induced by chemotherapeutics.

When PARP is inhibited in these repair-deficient cancer cells, they are overwhelmed with irreparable double strand DNA breaks. The unchecked damaged DNA eventually induces cell

death, a key mechanism in prevention of fast-dividing tumor cell growth.

PARP inhibitors can act in two ways. These compounds prevent the enzymatic activity of PARP, suppressing DNA repair, and can also prevent PARP from separating from damaged DNA, inhibiting replication².

PARP inhibitors:

Iniparib (I5354)

Veliparib (V1745)

Olaparib (O4402)

3-Aminobenzamide (A4931)

AZD2461 (A9612)

PJ34 HCl (P3600)

2. Murai J, Huang SY, Das BB, et al. *Cancer Res.* 2012 Nov 1;72(21):5588-99.

PARP proteins detect single strand breaks in DNA

New: PI3K Inhibitors

Phosphatidylinositol-3-kinase (PI3K) is an enzyme involved in cell growth, proliferation, differentiation, motility, and survival. PI3Ks are grouped into several different classes based on structure, function, and substrate specificity.

Class I PI3Ks are heterodimers composed of a regulatory subunit (p85) and a catalytic subunit (p110), both of which have several variants. This class of PI3Ks is likely the most well known, as it is responsible for activating Akt (PKB) and regulating signal transduction of mTOR and other kinases. Class I PI3Ks are involved in intracellular trafficking, cell proliferation, immune function, and insulin signaling¹⁻².

Because of its broad spectrum of activity, PI3K is an excellent target in the development

of immunosuppressants, anti-diabetic compounds, cardiovascular products, anti-inflammatories, and chemotherapeutics.

Representative PI3K inhibitors:

Wortmannin (W5769)

BYL719 (B9700)

GSK2334470 (G7344)

CAL101 (C0044)

TGX-221 (T2792)

TG100-115 (T2402)

PX-866 (P9200)

PIK-75 HCl (P3540)

AZD6482 (A9712)

AS-605240 (A7204)

Chemical structure of compound 10, a complex polycyclic molecule. It features a pentacyclic core with a brominated phenyl group and a carboxylic acid moiety.

4-BrA23187

1 mg

5 mg

Kim DY, Kang TB, Shim DW, et al. Emodin attenuates A23187-induced mast cell degranulation and tumor necrosis factor- α secretion through protein kinase C and I κ B kinase 2 signaling. *Eur J Pharmacol*. 2014 Jan 15;723:501-6. PMID: 24239713.

Shang M, Zhang Q, Zhang MX, et al. Effects of endothelial microvesicles induced by A23187 on H9c2 cardiomyocytes. Zhongguo Ying Yong Sheng Li Xue Za Zhi. 2013 Nov;29(6):559-64. PMID: 24654540.

Tateno H, Krapf D, Hino T, et al. Ca^{2+} ionophore A23187 can make mouse spermatozoa capable of fertilizing in vitro without activation of cAMP-dependent phosphorylation pathways. *Proc Natl Acad Sci U S A*. 2013 Nov 12;110(46):18543-8. PMID: 24128762

A0102**A23187 Ca-Mg**

(C₂₀H₃₆N₂O₆)₂Mg • (C₂₀H₃₆N₂O₆)₂Ca FW: 523.62 ≥98%

Ca²⁺ ionophore. It induces formation of endothelial microvesicles, increasing leakage of lactate dehydrogenase and decreasing cell viability. It also induces mast cell degranulation and stimulates the acrosome reaction in spermatozoa.

Kim DY, Kang TB, Shim DW, et al. Emodin attenuates A23187-induced mast cell degranulation and tumor necrosis factor-α secretion through protein kinase C and Ixβ kinase 2 signaling. *Eur J Pharmacol.* 2014 Jan 15;723:501-6. PMID: 24239713.

Shang M, Zhang Q, Zhang MX, et al. Effects of endothelial microvesicles induced by A23187 on H9c2 cardiomyocytes. *Zhongguo Ying Yong Sheng Li Xue Za Zhi.* 2013 Nov;29(6):559-64. PMID: 24654540.

Tateno H, Krapf D, Hino T, et al. Ca²⁺ ionophore A23187 can make mouse spermatozoa capable of fertilizing in vitro without activation of cAMP-dependent phosphorylation pathways. *Proc Natl Acad Sci U S A.* 2013 Nov 12;110(46):18543-8. PMID: 24128762.

A0501**Abamectin**

Avermectin B1

C₄₈H₇₂O₁₄(B1a) C₄₇H₇₀O₁₄(B1b) [71751-41-2] ≥70%

F0F1-ATPase and adenine nucleotide translocator inhibitor and GABA receptor antagonist. It prevents mitochondrial respiration and decreases sperm count and motility.

Castanha Zanolli JC, Maioli MA, Medeiros HC, et al. Abamectin affects the bioenergetics of liver mitochondria: A potential mechanism of hepatotoxicity. *Toxicol In Vitro.* 2012 Feb;26(1):51-6. PMID: 22024101.

Celik-Ozenci C, Tasatargil A, Tekcan M, et al. Effects of abamectin exposure on male fertility in rats: potential role of oxidative stress-mediated poly(ADP-ribose) polymerase (PARP) activation. *Regul Toxicol Pharmacol.* 2011 Dec;61(3):310-7. PMID: 21945325.

Holden-Dye L, Walker RJ. Avermectin and avermectin derivatives are antagonists at the 4-aminobutyric acid (GABA) receptor on the somatic muscle cells of *Ascaris*; is this the site of anthelmintic action? *Parasitology.* 1990 Oct;101 Pt 2:265-71. PMID: 2175874.

A0776	ABT-199	NEW	1 mg 5 mg 10 mg
	GDC-0199 C ₄₅ H ₃₀ ClN ₇ O ₅ FW: 868.44 [1257044-40-8] ≥98% BH3 mimetic and Bcl-2 inhibitor. It induces apoptosis in chronic lymphocytic leukemia cells. Khaw SL, Mérimo D, Anderson MA, et al. Both leukaemic and normal peripheral B lymphoid cells are highly sensitive to the selective pharmacological inhibition of prosurvival Bcl-2 with ABT-199. <i>Leukemia</i> . 2014 Jan 9. [Epub ahead of print]. PMID: 24402163. Pan R, Hodgall LJ, Benito JM, et al. Selective BCL-2 Inhibition by ABT-199 Causes On-Target Cell Death in Acute Myeloid Leukemia. <i>Cancer Discov</i> . 2014 Feb 13. [Epub ahead of print]. PMID: 24346116. Vandenberg CJ, Cory S. ABT-199, a new Bcl-2-specific BH3 mimetic, has in vivo efficacy against aggressive Myc-driven mouse lymphomas without provoking thrombocytopenia. <i>Blood</i> . 2013 Mar 21;121(12):2285-8. PMID: 23341542.		
A0777	ABT-263	NEW	1 mg 5 mg 10 mg
	Navitoclax; A-855071 C ₄₇ H ₃₅ ClF ₃ N ₃ O ₅ S ₃ FW: 974.61 [923564-51-6] ≥98% BH3 mimetic and inhibitor of Bcl-2, Bcl-ω, and Bcl-xl. It enhances the efficacy of co-administered chemotherapeutics and inhibits proliferation of chronic lymphocytic leukemia cells. Debrincat MA, Pleines I, Lebois M, et al. BCL-2 is dispensable for thrombopoiesis and platelet survival. <i>Cell Death Dis</i> . 2015 Apr 16;6:e1721. PMID: 25880088. Khaw SL, Mérimo D, Anderson MA, et al. Both leukaemic and normal peripheral B lymphoid cells are highly sensitive to the selective pharmacological inhibition of prosurvival Bcl-2 with ABT-199. <i>Leukemia</i> . 2014 Jan 9. [Epub ahead of print]. PMID: 24402163. Balakrishnan K, Gandhi V. Bcl-2 antagonists: a proof of concept for CLL therapy. <i>Invest New Drugs</i> . 2013 Oct;31(5):1384-94. PMID: 23907405.		
A0778	ABT-737	NEW	5 mg 10 mg
	C ₄₂ H ₄₅ ClN ₆ O ₃ S ₂ FW: 813.43 [852808-04-9] ≥98% BH3 mimetic and inhibitor of Bcl-2, Bcl-xl, and Bcl-ω. It inhibits growth of acute myelogenous leukemia cells and induces apoptosis and clearance in platelets. Lieber J, Armeanu-Ebinger S, Fuchs J. The Role of BH3-Mimetic Drugs in the Treatment of Pediatric Hepatoblastoma. <i>Int J Mol Sci</i> . 2015 Feb 16;16(2):4190-4208. PMID: 25690034. Baev DV, Krawczyk J, O'Dwyer M, et al. The BH3-mimetic ABT-737 effectively kills acute myeloid leukemia initiating cells. <i>Leuk Res Rep</i> . 2014 Sep 1;3(2):79-82. PMID: 25379408. Gyulkhandanyan AV, Mutlu A, Allen DJ, et al. BH3-mimetic ABT-737 induces strong mitochondrial membrane depolarization in platelets but only weakly stimulates apoptotic morphological changes, platelet shrinkage and microparticle formation. <i>Thromb Res</i> . 2014 Jan;133(1):73-9. PMID: 24268298.		
A0812	Ac-D-E		5 mg 10 mg 25 mg
Ac-Asp-Glu-OH	Isospaglumic acid; NAAG C ₁₁ H ₁₆ N ₂ O ₈ FW: 304.3 [3106-85-2] ≥95% Mast cell stabilizer used to treat seasonal allergic rhinitis. Horak F. Seasonal allergic rhinitis. Newer treatment approaches. <i>Drugs</i> . 1993 Apr;45(4):518-27. PMID: 7684672.		
C0375	Ac-DEVD-pNA		1 mg 2 mg 5 mg
Ac-Asp-Glu-Val-Asp-pNA	Colorimetric caspase 3 substrate C ₂₆ H ₃₄ N ₆ O ₁₃ FW: 638.6 ≥95% Substrate used to measure activity of caspase 3. Mahdavi M, Davoodi J, Zali MR, et al. Concomitant activation of caspase-9 and down-regulation of IAP proteins as a mechanism of apoptotic death in HepG2, T47D and HCT-116 cells upon exposure to a derivative from 4-aryl-4H-chromenes family. <i>Biomed Pharmacother</i> . 2011 Jun;65(3):175-82. PMID: 21565459. Kluza J, Lansiaux A, Watterz N, et al. Apoptotic response of HL-60 human leukemia cells to the antitumor drug TAS-103. <i>Cancer Res</i> . 2000 Aug 1;60(15):4077-84. PMID: 10945613		
A0825	Ac-GPK-pNA		25 mg
Ac-Gly-Pro-Lys-pNA	C ₂₁ H ₃₀ N ₆ O ₆ FW: 462.5 ≥95% Substrate used to measure caspase activity.		
A0826	Ac-GPK(Ac)-pNA		25 mg
Ac-Gly-Pro-Lys(Ac)-pNA	C ₂₃ H ₃₂ N ₆ O ₇ FW: 504.5 ≥95% Substrate used to measure caspase activity.		

A0832	Ac-IEAR-pNA	25 mg
Ac-Ile-Glu-Ala-Arg-pNA • HCl	$C_{28}H_{43}N_9O_9$ FW: 649.7 $\geq 95\%$ Substrate used to measure caspase activity.	
A0834	Ac-IETD-pNA	25 mg
Ac-Ile-Glu-Thr-Asp-pNA	$C_{27}H_{38}N_6O_{12}$ FW: 638.6 $\geq 95\%$ Substrate used to measure caspase 8 activity. Smith GK, Barrett DG, Blackburn K, et al. Expression, preparation, and high-throughput screening of caspase-8: discovery of redox-based and steroid diacid inhibition. Arch Biochem Biophys. 2002 Mar 15;399(2):195-205. PMID: 11888206. Koeplinger KA, Mildner AM, Leone JW, et al. Caspase 8: an efficient method for large-scale autoactivation of recombinant procaspase 8 by matrix adsorption and characterization of the active enzyme. Protein Expr Purif. 2000 Apr;18(3):378-87. PMID: 10733893.	
A1084	Ac-VEID-pNA	25 mg
Ac-Val-Glu-Ile-Asp-pNA	$C_{28}H_{40}N_6O_{11}$ FW: 636.6 $\geq 95\%$ Substrate used to measure caspase 6 activity. Kanazawa T, Kono T, Watanabe M, et al. Bcl-2 blocks apoptosis caused by pterisin-1, a guanine-specific ADP-ribosylating toxin from the cabbage butterfly. Biochem Biophys Res Commun. 2002 Aug 9;296(1):20-5. PMID: 12147221.	
A1097	Ac-YVAD-pNA	25 mg
Ac-Tyr-Val-Ala-Asp-pNA	$C_{29}H_{36}N_6O_{10}$ FW: 628.6 $\geq 95\%$ Substrate used to measure caspase 1 activity. Pereira NA, Song Z. Some commonly used caspase substrates and inhibitors lack the specificity required to monitor individual caspase activity. Biochem Biophys Res Commun. 2008 Dec 19;377(3):873-7. PMID: 18976637. Eckert A, Steiner B, Marques C, et al. Elevated vulnerability to oxidative stress-induced cell death and activation of caspase-3 by the Swedish amyloid precursor protein mutation. J Neurosci Res. 2001 Apr 15;64(2):183-92. PMID: 11288146.	
A0802	Acarbose	1 g
	BAY G 5421	5 g
	$C_{25}H_{43}NO_{18}$ FW: 645.6 [56180-94-0] $\geq 98\%$ α -Glucosidase inhibitor that decreases digestion of complex carbohydrates and prevents glucose absorption. It improves insulin sensitivity and decreases postprandial hyperglycemia. Kalra S. Alpha glucosidase inhibitors. J Pak Med Assoc. 2014 Apr;64(4):474-6. PMID: 24864650. Okada K, Yanagawa T, Warabi E, et al. The alpha-glucosidase inhibitor acarbose prevents obesity and simple steatosis in sequestosome 1/A170/p62 deficient mice. Hepatol Res. 2009 May;39(5):490-500. PMID: 19207582. Hoffmann J, Spengler M. Efficacy of 24-week monotherapy with acarbose, metformin, or placebo in dietary-treated NIDDM patients: the Essen-II Study. Am J Med. 1997 Dec;103(6):483-90. PMID: 9428831.	25 g
		
A1017	Aceclofenac	1 g
	$C_{16}H_{13}Cl_2NO_4$ FW: 354.18 [89796-99-6] $\geq 98\%$ Diclofenac analog, NSAID, and COX-2 inhibitor used to treat arthritis. It also decreases neutrophil adhesion to endothelial cells. Chopade AR, Sayyad FJ, Naikwade NS. Pharmacological characterization of carrageenan induced heat muscle hyperalgesia in rats using non-selective, preferential and selective COX-2 inhibitors. Pharmacol Rep. 2014 Jun;66(3):353-62. PMID: 24905509. González-Alvaro I, Carmona L, Díaz-González F, et al. Aceclofenac, a new nonsteroidal antiinflammatory drug, decreases the expression and function of some adhesion molecules on human neutrophils. J Rheumatol. 1996 Apr;23(4):723-9. PMID: 8730134.	5 g
		25 g
		100 g
A0816	Acemetacin	1 g
	$C_{21}H_{18}ClNO_6$ FW: 415.83 [53164-05-9] $\geq 98\%$ Prodrug of indomethacin, NSAID, and COX-1/2 inhibitor used to treat pain and arthritis. It also scavenges ROS and RNS. Chávez-Piña AE, McKnight W, Dickey M, et al. Mechanisms underlying the anti-inflammatory activity and gastric safety of acemetacin. Br J Pharmacol. 2007 Nov;152(6):930-8. PMID: 17876306. Fernandes E, Costa D, Toste SA, et al. In vitro scavenging activity for reactive oxygen and nitrogen species by nonsteroidal anti-inflammatory indole, pyrrole, and oxazole derivative drugs. Free Radic Biol Med. 2004 Dec 1;37(11):1895-905. PMID: 15528048.	5 g
		

A0916**Acepromazine Maleate** $C_{19}H_{22}N_2OS \cdot C_4H_4O_4$

FW: 442.53

[3598-37-6]

 $\geq 98\%$ **25 mg****100 mg****250 mg**

Dopamine D1/2 receptor and 5-HT1A/2A receptor antagonist used to prevent nausea and induce sedation. It also prevents sudden cardiac death in models of status epilepticus and reduces vasopressor activity of dopamine during anesthesia.

Monteiro ER, Teixeira Neto FJ, et al. Effects of acepromazine on the cardiovascular actions of dopamine in anesthetized dogs. *Vet Anaesth Analg*. 2007 Sep;34(5):312-21. PMID: 17686118.

Harrigan T, Bureau YR, Persinger MA, et al. Prevention of sudden cardiac death by the atypical neuroleptic acepromazine following status epilepticus in rats. *Life Sci*. 1994;54(24):PL457-62. PMID: 8196501.

A0919**Acetyl-L-Carnitine**

ALCAR

 $C_9H_{17}NO_4$

FW: 203.24

[3040-38-8]

 $\geq 98\%$ **1 g****5 g**

Carnitine derivative involved in energy homeostasis. It displays a variety of biological activities, including acetylating p65 and upregulating expression of mGluR2s, suppressing cellular stress responses in neurons, and indirectly modulating activity of M1 mAChRs.

Cuccurazzu B, Bortolotto V, Valente MM, et al. Upregulation of mGlu2 receptors via NF- κ B p65 acetylation is involved in the Proneurogenic and antidepressant effects of acetyl-L-carnitine. *Neuropsychopharmacology*. 2013 Oct;38(11):2220-30. PMID: 23670591.

Onofrij M, Ciccocioppo F, Vananes S, et al. Acetyl-L-carnitine: from a biological curiosity to a drug for the peripheral nervous system and beyond. *Expert Rev Neurother*. 2013 Aug;13(8):925-36. PMID: 23965166.

A0922**Acetyl-L-Carnitine Hydrochloride****NEW** $C_9H_{17}NO_4 \cdot HCl$

FW: 239.7

[5080-50-2]

 $\geq 98\%$ **1 g****5 g****25 g**

Carnitine derivative involved in energy homeostasis. It acetylates p65, inhibits 3-NPA-produced cellular stress responses and neurotoxicity, normalizes brain levels of neurotrophic factors such as NGF, GDNF, and artemin, and indirectly modulates M1 mAChR activity.

Cuccurazzu B, Bortolotto V, Valente MM, et al. Upregulation of mGlu2 receptors via NF- κ B p65 acetylation is involved in the Proneurogenic and antidepressant effects of acetyl-L-carnitine. *Neuropsychopharmacology*. 2013 Oct;38(11):2220-30. PMID: 23670591.

Onofrij M, Ciccocioppo F, Vananes S, et al. Acetyl-L-carnitine: from a biological curiosity to a drug for the peripheral nervous system and beyond. *Expert Rev Neurother*. 2013 Aug;13(8):925-36. PMID: 23965166.

A0819**Acetylsalicylic Acid**

Salicylic acid acetate; Aspirin

 $C_9H_8O_4$

FW: 180.16

[50-78-2]

 $\geq 98\%$ **500 g****1 kg**

NSAID and COX-1/2 inhibitor used to decrease inflammation. It inhibits platelet aggregation and prolongs bleeding time by decreasing levels of thromboxane A2. Chronic administration decreases risk of cancer and cardiovascular events.

Algra AM, Rothwell PM. Effects of regular aspirin on long-term cancer incidence and metastasis: a systematic comparison of evidence from observational studies versus randomised trials. *Lancet Oncol*. 2012 May;13(5):518-27. PMID: 22440112.

Antithrombotic Trialists' (ATT) Collaboration: Baigent C, Blackwell L, Collins R, et al. Aspirin in the primary and secondary prevention of vascular disease: collaborative meta-analysis of individual participant data from randomised trials. *Lancet*. 2009 May 30;373(9678):1849-60. PMID: 9482214.

A0817**D,L-1'-Acetoxychavicol Acetate**

CCRIS 7708

 $C_{13}H_{14}O_4$

TRPA1 channel agonist and xanthine oxidase inhibitor. It increases levels of phase II enzymes in models of colon carcinogenesis and suppresses tumor growth in animal models of squamous cell carcinoma. In other cancer models, it prevents angiogenesis and metastasis. It also inhibits CRM1, preventing influenza virus replication.

Modulation of the cardiac sodium/bicarbonate cotransporter by the renin angiotensin aldosterone system: pathophysiological consequences. <i>Front Physiol.</i> 2014 Jan 17;4:411. PMID: 24478712.	

A5281	Angiotensin II (4-8), human	5 mg 10 mg 25 mg
H-Tyr-Ile-His-Pro-Phe-OH	C₃₅H₄₅N₇O₇ FW: 675.79 ≥95% Endogenous peptide involved in vasoconstriction, Na⁺ reabsorption, and blood pressure. It activates AT1 receptors and Na⁺/H⁺ transporters. It increases intracellular Ca²⁺, induces vasoconstriction, and raises blood pressure, volume, and pH.	
A5277	Angiotensin II, human	5 mg 10 mg 25 mg
Asp-Arg-Val-Tyr-Ile-His-Pro-Phe-OH	C₅₀H₇₁N₁₃O₁₂ FW: 1046.19 [68521-88-0] ≥95% Endogenous peptide involved in vasoconstriction, Na⁺ reabsorption, and blood pressure. It activates AT1 receptors and Na⁺/H⁺ transporters. It increases intracellular Ca²⁺, induces vasoconstriction, and raises blood pressure, volume, and pH. De Giusti VC, Ciancio MC, Orłowski A, et al. Modulation of the cardiac sodium/bicarbonate cotransporter by the renin angiotensin aldosterone system: pathophysiological consequences. <i>Front Physiol.</i> 2014 Jan 17;4:411. PMID: 24478712. Moon JY. Recent Update of Renin-angiotensin-aldosterone System in the Pathogenesis of Hypertension. <i>Electrolyte Blood Press.</i> 2013 Dec;11(2):41-45. PMID: 24627703.	
A5278	Angiotensin III, human	5 mg 10 mg 25 mg
H-Arg-Val-Tyr-Ile-His-Pro-Phe-OH	C₄₆H₆₆N₁₂O₉ FW: 931.1 [12687-51-3] ≥98% Endogenous cleavage product of AT II and AT1 receptor agonist. It is less active than AT II. It also increases aldosterone secretion and mean arterial pressure. Yugandhar VG, Clark MA. Angiotensin III: a physiological relevant peptide of the renin angiotensin system. <i>Peptides.</i> 2013 Aug;46:26-32. PMID: 23692861. Yang R, Smolders I, Dupont AG. Blood pressure and renal hemodynamic effects of angiotensin fragments. <i>Hypertens Res.</i> 2011 Jun;34(6):674-83. PMID: 21412242.	
A5272	Angiotensin, dog/rat	5 mg 10 mg 25 mg
H-Asp-Arg-Val-Tyr-Ile-His-Pro-Phe-His-Leu-OH	C₄₁H₆₂N₁₂O₁₁ FW: 899.03 ≥95% Derivative of AT I and precursor to AT II that displays vasoconstrictive activity. Moon JY. Recent Update of Renin-angiotensin-aldosterone System in the Pathogenesis of Hypertension. <i>Electrolyte Blood Press.</i> 2013 Dec;11(2):41-45. PMID: 24627703. Herichova I, Szantoova K. Renin-angiotensin system: upgrade of recent knowledge and perspectives. <i>Endocr Regul.</i> 2013 Jan;47(1):39-52. PMID: 23363256.	
A5275	[Des-Asp1]-Angiotensin I, human	5 mg 10 mg 25 mg
H-Arg-Val-Tyr-Ile-His-Pro-Phe-His-Leu-OH	C₅₈H₈₄N₁₆O₁₁ FW: 1181.42 ≥95% Derivative of endogenous cleavage product of angiotensin and precursor to angiotensin II. It serves no endogenous biological purpose. Gonzalez-Villalobos RA, Shen XZ, Bernstein EA, et al. Rediscovering ACE: novel insights into the many roles of the angiotensin-converting enzyme. <i>J Mol Med (Berl).</i> 2013 Oct;91(10):1143-54. PMID: 23686164.	
A5285	[Ile7]-Angiotensin III	1 mg 2 mg 5 mg
H-Arg-Val-Tyr-Ile-His-Pro-Ile-OH	C₄₃H₆₈N₁₂O₉ FW: 897.1 ≥95% Derivative of endogenous derivative and cleavage product of AT II and AT1 receptor agonist. It is less active than AT II. It also increases aldosterone secretion and mean arterial pressure. Yugandhar VG, Clark MA. Angiotensin III: a physiological relevant peptide of the renin angiotensin system. <i>Peptides.</i> 2013 Aug;46:26-32. PMID: 23692861.	
A5282	[Sar1 Ile8]-Angiotensin II	5 mg 10 mg 25 mg
H-Sar-Arg-Val-Tyr-Ile-His-Pro-Ile-OH	C₄₆H₇₄N₁₃O₁₀ FW: 968.1 [67724-27-0] ≥95% Endogenous peptide derivative involved in vasoconstriction, Na⁺ reabsorption, and blood pressure. It activates AT1 receptors and Na⁺/H⁺ transporters. It increases intracellular Ca²⁺, induces vasoconstriction, and raises blood pressure, volume, and pH.	

A5283	[Sar1]-Angiotensin II	5 mg
	$C_{49}H_{71}N_{13}O_{11}$ FW: 1018.19 $\geq 95\%$	10 mg
H-Sar-Arg-Val-Tyr-Ile-His-Pro-Phe-OH	Endogenous peptide derivative involved in vasoconstriction, Na^+ reabsorption, and blood pressure. It activates AT1 receptors and Na^+/H^+ transporters. It increases intracellular Ca^{2+} , induces vasoconstriction, and raises blood pressure, volume, and pH.	25 mg
De Giusti VC, Ciancio MC, Orłowski A, et al. Modulation of the cardiac sodium/bicarbonate cotransporter by the renin angiotensin aldosterone system: pathophysiological consequences. <i>Front Physiol.</i> 2014 Jan 17;4:411. PMID: 24478712.		
Moon JY. Recent Update of Renin-angiotensin-aldosterone System in the Pathogenesis of Hypertension. <i>Electrolyte Blood Press.</i> 2013 Dec;11(2):41-45. PMID: 24627703.		

A5284	[Val5]-Angiotensin II, human	5 mg
	$C_{49}H_{69}N_{13}O_{12}$ FW: 1032.18 $\geq 95\%$	10 mg
H-Asp-Arg-Val-Tyr-Val-His-Pro-Phe-OH	Endogenous peptide derivative involved in vasoconstriction, Na^+ reabsorption, and blood pressure. It activates AT1 receptors and Na^+/H^+ transporters. It increases intracellular Ca^{2+} , induces vasoconstriction, and raises blood pressure, volume, and pH.	25 mg
De Giusti VC, Ciancio MC, Orłowski A, et al. Modulation of the cardiac sodium/bicarbonate cotransporter by the renin angiotensin aldosterone system: pathophysiological consequences. <i>Front Physiol.</i> 2014 Jan 17;4:411. PMID: 24478712.		
Moon JY. Recent Update of Renin-angiotensin-aldosterone System in the Pathogenesis of Hypertension. <i>Electrolyte Blood Press.</i> 2013 Dec;11(2):41-45. PMID: 24627703.		

A5287	Angiotensinogen (1-14), human	1 mg
	$C_{83}H_{122}N_{24}O_{19}$ FW: 1760.05 $\geq 95\%$	2 mg
H-Asp-Arg-Val-Tyr-Ile-His-Pro-Phe-His-Leu-Val-Ile-His-Asn-OH	Renin substrate and precursor to all angiotensin peptides. It is produced in the liver in response to estrogen, thyroid, or corticosteroid signaling.	5 mg
Herichova I, Szantova K. Renin-angiotensin system: upgrade of recent knowledge and perspectives. <i>Endocr Regul.</i> 2013 Jan;47(1):39-52. PMID: 23363256.		
Kobori H, Urushihara M. Augmented intrarenal and urinary angiotensinogen in hypertension and chronic kidney disease. <i>Pflugers Arch.</i> 2013 Jan;465(1):3-12. PMID: 22918624.		

A5326	Aniracetam	25 mg
	Ro-13-5057 $C_{12}H_{13}NO_3$ FW: 219.24 [72432-10-1] $\geq 98\%$	100 mg
	AMPA positive allosteric modulator and agonist at dopamine D2 receptors, 5-HT2A receptors, and nAChRs. It decreases anxiety-like behaviors and improves cognitive deficits associated with stroke and Alzheimer's disease.	500 mg
Wang YF, Li CC, Cai JX. Aniracetam attenuates H_2O_2 -induced deficiency of neuron viability, mitochondria potential and hippocampal long-term potentiation of mice in vitro. <i>Neurosci Bull.</i> 2006 Sep;22(5):274-80. PMID: 17690727.		
Jin R, Clark S, Weeks AM, et al. Mechanism of positive allosteric modulators acting on AMPA receptors. <i>J Neurosci.</i> 2005 Sep 28;25(39):9027-36. PMID: 16192394.		
Nakamura K. Aniracetam: its novel therapeutic potential in cerebral dysfunctional disorders based on recent pharmacological discoveries. <i>CNS Drug Rev.</i> 2002 Spring;8(1):70-89. PMID: 12070527.		

A5334	Anisodamine	100 mg
	6-Hydroxy Hyoscyamine $C_{17}H_{23}NO_4$ FW: 305.37 [55869-99-3] $\geq 98\%$	500 mg
	Inhibitor of $\alpha 1$ -adrenergic receptors and mAChRs found in <i>Solanaceae</i> plants used to treat diabetic nephropathy, to induce atropinization in organophosphate poisoning subjects and to improve acute lung injury pathology.	1 g
Wang W, Chen QF, Li QB, et al. Efficiency of anisodamine for organophosphorus-poisoned patients when atropinization cannot be achieved with high doses of atropine. <i>Environ Toxicol Pharmacol.</i> 2014 Mar;37(2):477-81. PMID: 24561530.		
Guoshou Z, Chengye Z, Zhihui L, et al. Effects of high dose of anisodamine on the respiratory function of patients with traumatic acute lung injury. <i>Cell Biochem Biophys.</i> 2013 Jun;66(2):365-9. PMID: 23504631.		
Geng W, Fu XH, Gu XS, et al. Preventive effects of anisodamine against contrast-induced nephropathy in type 2 diabetics with renal insufficiency undergoing coronary angiography or angioplasty. <i>Chin Med J (Engl).</i> 2012 Oct;125(19):3368-72. PMID: 23044290.

Discovery of 4-amino-N-[(1S)-1-(4-chlorophenyl)-3-hydroxypropyl]-1-(7H-pyrrolo[2,3-d]pyrimidin-4-yl)piperidine-4-carboxamide (AZD5363), an orally bioavailable, potent inhibitor of Akt kinases. <i>J Med Chem.</i> 2013 Mar 14;56(5):2059-73. PMID: 23394218. Lamoureux F, Thomas C, Crafter C, et al. Blocked autophagy using lysosomotropic agents sensitizes resistant prostate tumor cells to the novel Akt inhibitor AZD5363. <i>Clin Cancer Res.</i> 2013 Feb 15;19(4):833-44. PMID: 23258740. Davies BR, Greenwood H, Dudley P, et al. Preclinical pharmacology of AZD5363, an inhibitor of AKT: pharmacodynamics, antitumor activity, and correlation of monotherapy activity with genetic background. <i>Mol Cancer Ther.</i> 2012 Apr;11(4):873-87. PMID: 22294718.	1 mg 5 mg 25 mg

A9712 	AZD-6482 $C_{22}H_{24}N_4O_4$ FW: 408.45 [1173900-33-8] ≥98% NEW Inhibitor of p110β PI3K. It inhibits insulin-induced adipocyte glucose uptake and decreases thrombin activity without increasing bleeding time or blood loss. Weigelt B, Warne PH, Lambros MB, et al. PI3K pathway dependencies in endometrioid endometrial cancer cell lines. <i>Clin Cancer Res</i> . 2013 Jul 1;19(13):3533-44. PMID: 23674493. Nylander S, Kull B, Björkman JA, et al. Human target validation of phosphoinositide 3-kinase (PI3K)β: effects on platelets and insulin sensitivity, using AZD6482 a novel PI3Kβ inhibitor. <i>J Thromb Haemost</i> . 2012 Oct;10(10):2127-36. PMID: 22906130.	1 mg 5 mg 10 mg
A9912 	AZD-7762 Hydrochloride $C_{17}H_{19}FN_4O_2S \cdot HCl$ FW: 398.88 [860352-01-8] ≥98% NEW CHK1 inhibitor. It increases sensitivity to DNA-damaging compounds and inhibits proliferation of breast cancer and ovarian cancer cells. Bryant C, Rawlinson R, Massey AJ. Chk1 inhibition as a novel therapeutic strategy for treating triple-negative breast and ovarian cancers. <i>BMC Cancer</i> . 2014 Aug 7;14:570. PMID: 25104095. Sausville E, Lorusso P, Carducci M, et al. Phase I dose-escalation study of AZD7762, a checkpoint kinase inhibitor, in combination with gemcitabine in US patients with advanced solid tumors. <i>Cancer Chemother Pharmacol</i> . 2014 Mar;73(3):539-49. PMID: 24448638. Ma CX, Cai S, Li S, et al. Targeting Chk1 in p53-deficient triple-negative breast cancer is therapeutically beneficial in human-in-mouse tumor models. <i>J Clin Invest</i> . 2012 Apr;122(4):1541-52. Erratum in: <i>J Clin Invest</i> . 2012 Jul 2;122(7):2702. PMID: 22446188.	5 mg 10 mg
A9914 	AZD-8055 $C_{25}H_{31}N_5O_4$ FW: 465.55 [1009298-09-2] ≥98% NEW Inhibitor of mTORC1/2. It promotes antibody class switching in B cells at low doses and decreases B cell proliferation and differentiation at high doses. It also increases survival in transplant recipients and suppresses viability of brain tumor cells. Limon JJ, So L, Jellbauer S, et al. mTOR kinase inhibitors promote antibody class switching via mTORC2 inhibition. <i>Proc Natl Acad Sci U S A</i> . 2014 Nov 25;111(47):E5076-85. PMID: 25385646. Luchman HA, Stechishin OD, Nguyen SA, et al. Dual mTORC1/2 blockade inhibits glioblastoma brain tumor initiating cells in vitro and in vivo and synergizes with temozolomide to increase orthotopic xenograft survival. <i>Clin Cancer Res</i> . 2014 Nov 15;20(22):5756-67. PMID: 25316808. Rosborough BR, Raïch-Regué D, Liu Q, et al. Adenosine triphosphate-competitive mTOR inhibitors: a new class of immunosuppressive agents that inhibit allograft rejection. <i>Am J Transplant</i> . 2014 Sep;14(9):2173-80. PMID: 25307040.	5 mg 25 mg 50 mg
A9715 	AZD-8330 ARRY-704; ARRY-424704 $C_{16}H_{17}FN_3O_4$ FW: 461.23 [869357-68-6] ≥98% NEW MEK 1/2 inhibitor. It inhibits proliferation of cancer cells. Cohen RB, Aamdal S, Nyakas M, et al. A phase I dose-finding, safety and tolerability study of AZD8330 in patients with advanced malignancies. <i>Eur J Cancer</i> . 2013 May;49(7):1521-9. PMID: 23433846. Akinleye A, Furqan M, Mukhi N, et al. MEK and the inhibitors: from bench to bedside. <i>J Hematol Oncol</i> . 2013 Apr 12;6:27. PMID: 23587417.	1 mg 5 mg 10 mg
A9817 	Azelaic Acid Anchoic acid $C_9H_{16}O_4$ FW: 188.22 [123-99-9] ≥98% NEW PPARγ agonist and kallikrein 5 inhibitor found in <i>Arabidopsis</i> . It is used to treat rosacea, acne, and hyperpigmentary disorders. It also suppresses activity of serine proteases, upregulates expression of antioxidant enzymes, inhibits proliferation of melanocytes, and suppresses DNA synthesis in cutaneous melanoma cells. Coda AB, Hata T, Miller J, et al. Cathelicidin, kallikrein 5, and serine protease activity is inhibited during treatment of rosacea with azelaic acid 15% gel. <i>J Am Acad Dermatol</i> . 2013 Oct;69(4):570-7. PMID: 23871720. Briganti S, Flori E, Mastrofrancesco A, et al. Azelaic acid reduced senescence-like phenotype in photo-irradiated human dermal fibroblasts: possible implication of PPARγ. <i>Exp Dermatol</i> . 2013 Jan;22(1):41-7. PMID: 23278893. Fitton A, Goa KL. Azelaic acid. A review of its pharmacological properties and therapeutic efficacy in acne and hyperpigmentary skin disorders. <i>Drugs</i> . 1991 May;41(5):780-98. PMID: 1712709.	5 g 25 g

A9818	Azelastine Hydrochloride	100 mg 500 mg 1 g
	$C_{22}H_{23}N_3O \cdot HCl$ FW: 418.35 [79307-93-0] $\geq 98\%$ TRPV1 receptor agonist and histamine H1 receptor antagonist. Used to treat allergic rhinitis. It inhibits pro-inflammatory cytokine production in mast cells and decreases capsaicin-induced cough. Singh U, Bernstein JA, Haar L, et al. Azelastine desensitization of transient receptor potential vanilloid 1: A potential mechanism explaining its therapeutic effect in nonallergic rhinitis. <i>Am J Rhinol Allergy</i> . 2014 May;28(3):215-24. PMID: 24980233. Horak F, Ziegelmayer UP. Azelastine nasal spray for the treatment of allergic and nonallergic rhinitis. <i>Expert Rev Clin Immunol</i> . 2009 Nov;5(6):659-69. PMID: 20477689. Kempuraj D, Huang M, Kandere-Grzybowska K, et al. Azelastine inhibits secretion of IL-6, TNF-alpha and IL-8 as well as NF-kappaB activation and intracellular calcium ion levels in normal human mast cells. <i>Int Arch Allergy Immunol</i> . 2003 Nov;132(3):231-9. PMID: 14646384.	
A3212	3'-Azido-3'-deoxythymidine	25 mg 100 mg 250 mg 1 g
	$C_{10}H_{13}N_5O_4$ FW: 267.24 [30516-87-1] $\geq 98\%$ Thymidine analog and DNA chain terminator used to treat HIV infection. It prevents DNA synthesis and viral replication and may inhibit DNA polymerase. Banerjee A, Abdelmegeed MA, Jang S, et al. Zidovudine (AZT) and hepatic lipid accumulation: implication of inflammation, oxidative and endoplasmic reticulum stress mediators. <i>PLoS One</i> . 2013 Oct 11;8(10):e76850. PMID: 24146933. Parker WB, White EL, Shaddix SC, et al. Mechanism of inhibition of human immunodeficiency virus type 1 reverse transcriptase and human DNA polymerases alpha, beta, and gamma by the 5'-triphosphates of carbovir, 3'-azido-3'-deoxythymidine, 2',3'-dideoxyguanosine and 3'-deoxythymidine. A novel RNA template for the evaluation of antiretroviral drugs. <i>J Biol Chem</i> . 1991 Jan 25;266(3):1754-62. PMID: 1703154.	
A9834	Azithromycin Dihydrate	500 mg 1 g 5 g
	$C_{38}H_{72}N_2O_{12} \cdot 2H_2O$ FW: 785.02 [117772-70-0] $\geq 98\%$ Protein translation inhibitor used to treat bacterial infections. It also inhibits the epithelial-to-mesenchymal transition and suppresses LPS-stimulated production of pro-inflammatory cytokines in macrophages. Bakheit AH, Al-Hadiya BM, Abd-Elgalil AA. Azithromycin. <i>Profiles Drug Subst Excp Relat Methodol</i> . 2014;39:1-40. PMID: 24794904. Medina CA, Rowe AM, Yun H, et al. Azithromycin treatment increases survival of high-risk corneal allotransplants. <i>Cornea</i> . 2013 May;32(5):658-66. PMID: 23407315. Banerjee B, Musk M, Sutanto EN, et al. Regional differences in susceptibility of bronchial epithelium to mesenchymal transition and inhibition by the macrolide antibiotic azithromycin. <i>PLoS One</i> . 2012;7(12):e52309. PMID: 23284981.	
A9978	Aztreonam	10 mg 50 mg 250 mg
	$C_{13}H_{17}N_5O_8S_2$ FW: 435.43 [78110-38-0] $\geq 96\%$ Penicillin binding protein inhibitor that prevents cell wall synthesis. It inhibits growth of gram negative bacteria. Dallal MM, Czachor JS. Aztreonam-induced myelosuppression during treatment of <i>Pseudomonas aeruginosa</i> pneumonia. <i>DICP</i> . 1991 Jun;25(6):594-7. PMID: 1877266.	
A0248	BAM-12P	1 mg 2 mg 5 mg
H-Tyr-Gly-Gly-Phe-Met-Arg-Arg-Val-Gly-Arg-Pro-Glu-OH	Bovine adrenal medulla 12 peptide $C_{62}H_{97}N_{21}O_{16}S$ FW: 1424.66 [75513-71-2] $\geq 95\%$ α OR agonist and cleavage product of proenkephalin. Davis TP, Hoyer GL, Davis P, et al. Proenkephalin A-derived peptide E and its fragments alter opioid contractility in the small intestine. <i>Eur J Pharmacol</i> . 1990 Dec 4;191(3):253-61. PMID: 2086244. Mizuno K, Minamino N, Kangawa K, et al. A new endogenous opioid peptide from bovine adrenal medulla: isolation and amino acid sequence of a dodecapeptide (BAM-12P). <i>Biochem Biophys Res Commun</i> . 1980 Aug 29;95(4):1482-8. PMID: 7417331.	
A0249	BAM-22P	1 mg 2 mg 5 mg
H-Tyr-Gly-Gly-Phe-Met-Arg-Arg-Val-Gly-Arg-Pro-Glu-Trp-Trp-Met-Asp-Tyr-Gln-Lys-Arg-Tyr-Gly-OH	Bovine adrenal medulla 22 peptide $C_{130}H_{184}N_{38}O_{31}S_2$ FW: 2839.28 $\geq 95\%$ α OR and μ OR agonist and cleavage product of proenkephalin. Cai M, Chen T, Quirion R, et al. The involvement of spinal bovine adrenal medulla 22-like peptide, the proenkephalin derivative, in modulation of nociceptive processing. <i>Eur J Neurosci</i> . 2007 Sep;26(5):1128-38. PMID: 17767492.	

B0000	2B-(A)				1 mg 2 mg 5 mg
Biotin-Arg-Arg-Ala-Ala-Glu-Glu-Leu-Asp-Ser-Arg-Ala-Gly-Ala-Pro-Gln-Leu-OH	$C_{81}H_{137}N_{26}O_{28}S$ Peptide-biotin conjugate.	FW: 1983.23		$\geq 95\%$	
B0072	2B-(S)				1 mg 2 mg 5 mg
Biotin-Arg-Arg-Ala-Ala-Glu-Glu-Leu-Asp-Ser-Arg-Ala-Gly-Ala-Pro-Gln-Leu-OH	$C_{81}H_{137}N_{26}O_{28}S$ Peptide-biotin conjugate.	FW: 1983.23		$\geq 95\%$	
B0110	Baclofen				1 g 5 g 10 g
	$C_{10}H_{12}ClNO_2$ GABA derivative and GABA-B receptor agonist used to study GABAergic neurotransmission and to treat spasticity and dystonia. It decreases frequency and amplitude of excitatory post-synaptic currents and mediates alcohol craving during withdrawal.	FW: 213.66	[1134-47-0]	$\geq 98\%$	
	Fukuhara K, Katafuchi T, Yoshimura M. Effects of baclofen on mechanical noxious and innocuous transmission in the spinal dorsal horn of the adult rat: in vivo patch-clamp analysis. <i>Eur J Neurosci.</i> 2013 Aug 20. [Epub ahead of print]. PMID: 23961926.				
	Kunru H, Koller M, Flores MC, et al. Effect of intrathecal baclofen on evoked pain perception: an evoked potentials and quantitative thermal testing study. <i>Eur J Pain.</i> 2013 Aug;17(7):1039-47. PMID: 23239275.				
B0108	Bactenecin				0.5 mg 1 mg
H-Arg-Leu-Cys-Arg-Ile-Val-Val-Ile-Arg-Val-Cys-Arg-OH (Disulfide Bridge Cys3-Cys11)	Bac7 $C_{65}H_{118}N_{24}O_{13}S_2$ Cathelicidin derivative found in bovine neutrophils that alters bacterial membrane permeability. It inhibits growth of <i>Burkholderia</i> , <i>Escherichia</i> , <i>Pseudomonas</i> , <i>Salmonella</i> , <i>Staphylococcus</i> , and <i>Enterobacter</i> .	FW: 1483.9	[116229-36-8]	$\geq 95\%$	
	Madhongska K, Pasan S, Phophetleb O, et al. Antimicrobial action of the cyclic peptide bactenecin on <i>Burkholderia pseudomallei</i> correlates with efficient membrane permeabilization. <i>PLoS Negl Trop Dis.</i> 2013 Jun 13;7(6):e2267. PMID: 23785532.				
B0025	Bafilomycin A1				1 mg
	$C_{35}H_{58}O_9$ Vacuolar H^+ ATPase inhibitor. It suppresses autophagy, prevents tumor growth in breast cancer models, and inhibits growth of <i>Plasmodium</i> .	FW: 622.83	[88899-55-2]	$\geq 90\%$	
	Graham RM, Thompson JW, Webster KA. Inhibition of the vacuolar ATPase induces Bnip3-dependent death of cancer cells and a reduction in tumor burden and metastasis. <i>Oncotarget.</i> 2014 Mar 15;5(5):1162-73. PMID: 24811485.

B0026	Bafilomycin B1				1 mg
	Setamycin $C_{44}H_{65}NO_{13}$ Vacuolar H^+ ATPase inhibitor that also indirectly inhibits Foxo1 and induces β cell apoptosis.	FW: 815.99	[88899-56-3]	$\geq 97\%$	
	Schachtschabel D, Arentshorst M, Lagendijk EL, et al. Vacuolar H^{+} -ATPase plays a key role in cell wall biosynthesis of <i>Aspergillus niger</i> . <i>Fungal Genet Biol.</i> 2012 Apr;49(4):284-93. PMID: 22222772.				
	Hettiarachchi KD, Zimmet PZ, Danial NN, et al. Transplacental exposure to the vacuolar-ATPase inhibitor bafilomycin disrupts survival signaling in beta cells and delays neonatal remodeling of the endocrine pancreas. <i>Exp Toxicol Pathol.</i> 2008 Aug;60(4-5):295-306. PMID: 18486461.				
B0133	Baicalin				1 mg 5 mg 10 mg 25 mg 100 mg
	$C_{21}H_{18}O_{11}$ Prolyl oligopeptidase and neuraminidase inhibitor found in <i>Scutellaria</i> . It prevents influenza infection, decreases systolic blood pressure and inhibits ventricular remodeling, and suppresses UV-induced skin aging responses in fibroblasts.	FW: 446.36	[21967-41-9]	$\geq 95\%$	
	Ding Y, Dou J, Teng Z, et al. Antiviral activity of baicalin against influenza A (H1N1/H3N2) virus in cell culture and in mice and its inhibition of neuraminidase. <i>Arch Virol.</i> 2014 Jul 31. [Epub ahead of print]. PMID: 25078390.				
	Min W, Liu X, Qian Q, et al. The effects of baicalin against UVA-induced photoaging in skin fibroblasts. <i>Am J Chin Med.</i> 2014;42(3):709-27. PMID: 24871661.				
	Zhang L, Pu Z, Wang J, et al. Baicalin inhibits hypoxia-induced pulmonary artery smooth muscle cell proliferation via the AKT/HIF-1 α /p27-associated pathway. <i>Int J Mol Sci.</i> 2014 May 9;15(5):8153-68. PMID: 24821539.				

B0109 	Bakuchiol UP 256 $C_{18}H_{24}O$ FW: 256.38 [10309-37-2] $\geq 98\%$ ER α agonist found in various plant sources. It exhibits a wide variety of biological activities, including inhibiting growth of <i>Streptococcus</i> , <i>Enterococcus</i> , <i>Lactobacillus</i> , <i>Actinomyces</i> , and <i>Porphyromonas</i> , suppressing LPS-stimulated production of pro-inflammatory cytokines, decreasing plasma glucose and triglyceride levels, and potentially inhibiting PP1B. Lim SH, Ha TY, Ahn J, et al. Estrogenic activities of Psoralea corylifolia L. seed extracts and main constituents. <i>Phytomedicine</i> . 2011 Mar 15;18(5):425-30. PMID: 21382704. Choi SY, Lee S, Choi WH, et al. Isolation and anti-inflammatory activity of Bakuchiol from Ulmus davidiana var. japonica. <i>J Med Food</i> . 2010 Aug;13(4):1019-23. PMID: 20553183.	10 mg 25 mg 100 mg
B0245 	Balicatib NEW AAE-581 $C_{23}H_{33}N_3O_2$ FW: 411.55 [354813-19-7] $\geq 98\%$ Cathepsin K inhibitor. It inhibits osteoclast activity, decreasing bone turnover and increasing bone mineral density and bone formation rates. Jerome C, Missbach M, Gamse R. Balicatib, a cathepsin K inhibitor, stimulates periosteal bone formation in monkeys. <i>Osteoporos Int</i> . 2012 Jan;23(1):339-49. PMID: 21380636. Chappard D, Libouban H, Mindeholm L, et al. The cathepsin K inhibitor AAE581 induces morphological changes in osteoclasts of treated patients. <i>Microsc Res Tech</i> . 2010 Jul;73(7):726-32. PMID: 20025055.	5 mg 25 mg
B0246 	Balofloxacin Dihydrate $C_{20}H_{24}FN_3O_4 \cdot 2H_2O$ FW: 425.45 [151060-21-8] $\geq 98.0\%$ Bacterial DNA gyrase inhibitor used primarily to treat gram positive bacteria infections. It is also active against <i>Mycoplasma pneumoniae</i> . Iwasaki H, Miyazaki S, Tsuji A, et al. In vitro and in vivo antibacterial activities of Q-35, a novel fluoroquinolone. <i>Chemotherapy</i> . 1995 Mar-Apr;41(2):100-12. PMID: 7758353. Ito T, Kojima K, Koizumi K, et al. Inhibitory activity on DNA gyrase and intracellular accumulation of quinolones: structure-activity relationship of Q-35 analogs. <i>Biol Pharm Bull</i> . 1994 Jul;17(7):927-30. PMID: 8000379.	10 mg 50 mg 250 mg
B0150 	Bambuterol Hydrochloride KWD-2183 $C_{18}H_{29}N_3O_3 \cdot HCl$ FW: 403.91 [81732-46-9] $\geq 98\%$ BChE inhibitor and β_2 -adrenergic receptor agonist that decreases bronchoconstriction. It is also a terbutaline prodrug. Mohr F, Zimmermann M, Klein J. Mice heterozygous for AChE are more sensitive to AChE inhibitors but do not respond to BuChE inhibition. <i>Neuropharmacology</i> . 2013 Apr;67:37-45. PMID: 23147415. Bosak A, Gazić I, Vinković V, et al. Stereoselective inhibition of human, mouse, and horse cholinesterases by bambuterol enantiomers. <i>Chem Biol Interact</i> . 2008 Sep 25;175(1-3):192-5. PMID: 18582854. Waldeck B. Beta-adrenoceptor agonists and asthma--100 years of development. <i>Eur J Pharmacol</i> . 2002 Jun 7;445(1-2):1-12. PMID: 12065188.	100 mg 500 mg 1 g 5 g
B0396 	BAY80-6946 NEW Copanlisib $C_{23}H_{28}N_8O_4$ FW: 480.52 [1032568-63-0] $\geq 98\%$ Inhibitor of p110 α PI3K. It induces cell cycle arrest and apoptosis in multiple myeloma cells. Glauer J, Pletz N, Schön M, et al. A novel selective small-molecule PI3K inhibitor is effective against human multiple myeloma in vitro and in vivo. <i>Blood Cancer J</i> . 2013 Sep 6;3:e141. PMID: 24013662. Cheng H, Merika E, Syrigos KN, et al. Novel agents for the treatment of pancreatic adenocarcinoma. Highlights from the "2011 ASCO Annual Meeting". Chicago, IL, USA; June 3-7, 2011. <i>JOP</i> . 2011 Jul 8;12(4):334-8. PMID: 21737890.	1 mg 5 mg 10 mg
B1603 	Beauvericin $C_{45}H_{57}N_3O_9$ FW: 783.95 [26048-05-5] $\geq 95\%$ Mycotoxin found in <i>Cordyceps</i> . It induces apoptosis in colon adenocarcinoma cells and non-small cell lung cancer cells and stimulates intracellular influx of Ca^{2+} . Prosperini A, Juan-García A, Font G, et al. Beauvericin-induced cytotoxicity via ROS production and mitochondrial damage in Caco-2 cells. <i>Toxicol Lett</i> . 2013 Oct 24;222(2):204-11. PMID: 23850777. Chen BF, Tsai MC, Jow GM. Induction of calcium influx from extracellular fluid by beauvericin in human leukemia cells. <i>Biochem Biophys Res Commun</i> . 2006 Feb 3;340(1):134-9. PMID: 16343425.	1 mg 5 mg

B1746	Belinostat	NEW	5 mg
	PXD101		10 mg
	<chem>C15H14N2O5</chem>	FW: 318.35	[414864-00-9]
			≥98%
	HDAC inhibitor used to treat T cell lymphoma. It also induces apoptosis in pancreatic cancer cells and decreases HIV release from macrophages.		
Campbell GR, Bruckman RS, Chu YL, et al. Autophagy Induction by Histone Deacetylase Inhibitors Inhibits HIV Type 1. J Biol Chem. 2015 Feb 20;290(8):5028-40. PMID: 25540204.			
Foss F, Advani R, Duvic M, et al. A Phase II trial of Belinostat (PXD101) in patients with relapsed or refractory peripheral or cutaneous T-cell lymphoma. Br J Haematol. 2014 Nov 17. [Epub ahead of print].			

B1545	Benzalkonium Bromide		100 g
		[91080-29-4]	500 g
		≥96%	
 R = C₈H₁₇ to C₁₈H₃₇	Cationic surfactant used as a disinfectant. It dissociates bacterial lipid membranes, allowing cellular leakage. It is most effective against gram positive bacteria. Larsen ST, Verder H, Nielsen GD. Airway effects of inhaled quaternary ammonium compounds in mice. <i>Basic Clin Pharmacol Toxicol</i>. 2012 Jun;110(6):537-43. PMID: 22188809. Saito K, Hayakawa T, Kawabata R, et al. In vitro antibacterial and cytotoxicity assessments of an orthodontic bonding agent containing benzalkonium chloride. <i>Angle Orthod</i>. 2009 Mar;79(2):331-7. PMID: 19216609.		

B1853	1,4-Benzoquinone	100 g
	Quinone $C_6H_4O_2$ FW: 108.09 [106-51-4] $\geq 98\%$	500 g
Hydroquinone synthesis precursor and inhibitor of 5-lipoxygenase used as a hydrogen acceptor and oxidant. It prevents leukotriene synthesis and inhibits growth of <i>Staphylococcus</i> , <i>Salmonella</i> , and <i>Bacillus</i> .		
Schaible AM, Filosa R, Temml V, et al. Elucidation of the molecular mechanism and the efficacy in vivo of a novel 1,4-benzoquinone that inhibits 5-lipoxygenase. Br J Pharmacol. 2014 May;171(9):2399-412. PMID: 24467325.		
Kim MH, Jo SH, Ha KS, et al. Antimicrobial activities of 1,4-benzoquinones and wheat germ extract. J Microbiol Biotechnol. 2010 Aug;20(8):1204-9. PMID: 20798583.		

B1753	Benfotiamine	250 mg
	$C_{19}H_{23}N_4O_6PS$	1 g
	FW: 466.453 [22457-89-2] ≥98%	5 g
Thiamine/vitamin B derivative and antioxidant. It displays several biological activities, including inhibiting pain neurotransmission, decreasing production of amyloid-β, and inhibiting LPS-induced release of leukotrienes, prostaglandins, and thromboxane B2. Hurt JK, Coleman JL, Fitzpatrick BJ, et al. Prostatic acid phosphatase is required for the antinociceptive effects of thiamine and benfotiamine. <i>PLoS One</i>. 2012;7(10):e48562. PMID: 23119057. Sun XJ, Zhao L, Zhao N, et al. Benfotiamine prevents increased β-amyloid production in HEK cells induced by high glucose. <i>Neurosci Bull</i>. 2012 Oct;28(5):561-6. PMID: 22961478. Shoeb M, Ramana KV. Anti-inflammatory effects of benfotiamine are mediated through the regulation of the arachidonic acid pathway in macrophages. <i>Free Radic Biol Med</i>. 2012 Jan 1;52(1):182-90. PMID: 22067901.

FW: 706.96

≥95%

Substance P analog and NK receptor agonist. It decreases pain thresholds in thermal pain models, induces bronchoconstriction, stimulates gastric acid secretion, and inhibits M-currents.

Clint BD, Lipton JM, Giesecke AH Jr. Analgesic and cardiovascular effects of centrally administered substance P. *Peptides.* 1988 May-Jun;9(3):619-23. PMID: 2458573.

E4418

β-Elementene

 $C_{15}H_{24}$

FW: 204.35

[515-13-9]

≥98%

Found in various plant sources. It suppresses Notch-1 signaling, decreases differentiation of Th17 cells, prevents expression of pro-inflammatory cytokines, and induces apoptosis in various cancer cell lines.

Yan B, Zhou Y, Feng S, et al. β-Elementene-Attenuated Tumor Angiogenesis by Targeting Notch-1 in Gastric Cancer Stem-Like Cells. *Evid Based Complement Alternat Med.* 2013;2013:268468. PMID: 23710217.

Zhang X, Li Y, Zhang Y, et al. Beta-elementene blocks epithelial-mesenchymal transition in human breast cancer cell line MCF-7 through Smad3-mediated down-regulation of nuclear transcription factors. *PLoS One.* 2013;8(3):e58719. PMID: 23516540.

E4444

Ellagic Acid

Benzoic acid

 $C_{14}H_6O_8$

FW: 302.2

[476-66-4]

≥98%

HDAC modulator found in fruit. It displays a variety of activities, including suppressing neovascularization and angiogenesis, preventing airway hyperresponsiveness in allergy models, inhibiting cellular proliferation and inducing apoptosis in pancreatic adenocarcinoma cells, and limiting proliferation of *Plasmodium* and *Rhinovirus*.

Zhou E, Fu Y, Wei Z, et al. Inhibition of allergic airway inflammation through the blockage of NF-κB activation by ellagic acid in an ovalbumin-induced mouse asthma model. *Food Funct.* 2014 Sep;5(9):2106-12. PMID: 24998475.

Kang I, Okla M, Chung S. Ellagic acid inhibits adipocyte differentiation through coactivator-associated arginine methyltransferase 1-mediated chromatin modification. *J Nutr Biochem.* 2014 Sep;25(9):946-53. PMID: 24929439.

Kowshik J, Giri H, Kiran Kishore TK, et al. Ellagic Acid Inhibits VEGF/VEGFR2, PI3K/Akt and MAPK Signaling Cascades in the Hamster Cheek Pouch Carcinogenesis Model. *Anticancer Agents Med Chem.* 2014 Jul 23. [Epub ahead of print]. PMID: 25060902.

E9418	Exendin 3 (9-39)	0.5 mg 1 mg 2.5 mg
H-Asp-Leu-Ser-Lys-Gln-Met-Glu-Glu-Glu-Ala-Val-Arg-Leu-Phe-Ile-Glu-Trp-Leu-Lys-Asn-Gly-Gly-Pro-Ser-Ser-Gly-Ala-Pro-Pro-Ser-NH ₂	C ₁₄₉ H ₂₃₄ N ₄₀ O ₄₇ S FW: 3369.83 [133514-43-9] ≥95% Exendin 3 derivative and GLP-1 receptor antagonist found in <i>Heloderma</i> . It induces spontaneous contractions in colon circular muscle. Amato A, Baldassano S, Liotta R, et al. Exogenous glucagon-like peptide-1 reduces contractions in human colon circular muscle. J Endocrinol. 2014 Jan 17. [Epub ahead of print]. PMID: 24443715. Hu G, Zhang Y, Jiang H, et al. Exendin-4 attenuates myocardial ischemia and reperfusion injury by inhibiting high mobility group box 1 protein expression. Cardiol J. 2013;20(6):600-4. PMID: 24338536.	
E9416	Exendin-3	0.5 mg 1 mg 2.5 mg
H-His-Ser-Asp-Gly-Thr-Phe-Thr-Ser-Asp-Leu-Ser-Lys-Gln-Met-Glu-Glu-Glu-Ala-Val-Arg-Leu-Phe-Ile-Glu-Trp-Leu-Lys-Asn-Gly-Gly-Pro-Ser-Ser-Gly-Ala-Pro-Pro-Ser-NH ₂	C ₁₈₄ H ₂₈₂ N ₅₀ O ₆₁ S FW: 4202.66 [130391-54-7] ≥95% GLP-1 analog and GLP-1 receptor agonist found in <i>Heloderma</i> . It may display anti-diabetic activities. Zhang Y, Chen W. Radiolabeled glucagon-like peptide-1 analogues: a new pancreatic β-cell imaging agent. Nucl Med Commun. 2012 Mar;33(3):223-7. PMID: 22262216. Eng J, Andrews PC, Kleinman WA, et al. Purification and structure of exendin-3, a new pancreatic secretagogue isolated from <i>Heloderma horridum</i> venom. J Biol Chem. 1990 Nov 25;265(33):20259-62. PMID: 1700785.	
E9417	Exendin-4	0.5 mg 1 mg 2.5 mg
H-His-Gly-Glu-Gly-Thr-Phe-Thr-Ser-Asp-Leu-Ser-Lys-Gln-Met-Glu-Glu-Glu-Ala-Val-Arg-Leu-Phe-Ile-Glu-Trp-Leu-Lys-Asn-Gly-Gly-Pro-Ser-Ser-Gly-Ala-Pro-Pro-Ser-NH ₂	C ₁₈₄ H ₂₈₂ N ₅₀ O ₆₀ S FW: 4186.03 [141758-74-9] ≥95% GLP-1 analog and GLP-1 receptor agonist found in <i>Heloderma</i> . It inhibits fibronectin secretion, suppresses ox-LDL-induced migration of macrophages, and prevents oxidative damage. Xu WW, Guan MP, Zheng ZJ, et al. Exendin-4 Alleviates High Glucose-Induced Rat Mesangial Cell Dysfunction through the AMPK Pathway. Cell Physiol Biochem. 2014;33(2):423-32. PMID: 24556697. Hu G, Zhang Y, Jiang H, et al. Exendin-4 attenuates myocardial ischemia and reperfusion injury by inhibiting high mobility group box 1 protein expression. Cardiol J. 2013;20(6):600-4. PMID: 24338536.	
E9819	Ezetimibe	25 mg 100 mg 250 mg
	C ₂₄ H ₂₁ F ₂ N ₃ O ₃ FW: 409.43 [163222-33-1] ≥98% NPC1L1 inhibitor. It induces autophagy and decreases free cholesterol in hepatocytes, prevents THP-1 cells from differentiating into macrophage-like cells, and improves fibrosis and steatosis in models of nonalcoholic fatty liver disease.	
F0010	FAM FLICA® Poly Caspases Assay Kit	25 Tests 100 Tests
	Caspase activity measuring kit.	
F0011	FAM FLICA™ Caspase 1 Assay Kit	25 Tests 100 Tests
	Caspase 1 activity measuring kit.	
F0012	FAM FLICA™ Caspase 2 Assay Kit	25 Tests 100 Tests
	Caspase 2 activity measuring kit.	
F0013	FAM FLICA™ Caspase 3 & 7 Assay Kit	25 Tests 100 Tests
	Caspase 3/7 activity measuring kit.	
F0014	FAM FLICA™ Caspase 6 Assay Kit	25 Tests 100 Tests
	Caspase 6 activity measuring kit.	

F0015	FAM FLICA™ Caspase 8 Assay Kit	25 Tests 100 Tests
	Caspase 8 activity measuring kit.

	Phenylalanine-specific serine protease activity measuring kit.	
F0118	Fam-Phe-DAP Green FLISP Assay™ Kit NEW	25 Tests 100 Tests
	Serine protease activity measuring kit.	
F0023	FAM-Spacer-Leu-CMK Green FLISP™ Assay Kit	25 Tests 100 Tests
	Serine protease activity measuring kit.	
F0022	FAM-Spacer-Phe-CMK Green FLISP™ Assay Kit	25 Tests 100 Tests
	Serine protease activity measuring kit.	
F0119	FAM-VAD-OPH I in vitro Apoptosis Detection Reagent NEW	4 vial Pack
	Apoptosis measuring kit.	
F0120	FAM-VAD-OPH II in vitro Apoptosis Detection Reagent NEW	4 vial Pack
	Apoptosis measuring kit.	

F0048	Famciclovir	50 mg 100 mg 500 mg
	$C_{14}H_{19}N_5O_4$ FW: 321.33 [104227-87-4] $\geq 98\%$ Penciclovir prodrug and guanosine analog. It terminates DNA chain synthesis and is used to treat herpes virus infection. Modi S, Van L, Gewirtzman A, et al. Single-day treatment for orolabial and genital herpes: a brief review of pathogenesis and pharmacology. <i>Ther Clin Risk Manag.</i> 2008 Apr;4(2):409-17. PMID: 18728852. Luber AD, Flaherty JF Jr. Famciclovir for treatment of herpesvirus infections. <i>Ann Pharmacother.</i> 1996 Sep;30(9):978-85. PMID: 8876860.	
F0150	Famotidine	500 mg 1 g 5 g
	$C_8H_{13}N_7O_2S_3$ FW: 337.45 [76824-35-6] $\geq 98\%$ Histamine H2 receptor antagonist and GSK-3β inhibitor used to treat ulcers. It also suppresses radiation-induced DNA damage. Mohammad M, Al-Masri IM, Issa A, et al. Famotidine inhibits glycogen synthase kinase-3β: an investigation by docking simulation and experimental validation. <i>J Enzyme Inhib Med Chem.</i> 2013 Aug;28(4):690-4. PMID: 22512725. Mozdarani H, Nasirian B, Haeri SA. In vivo gamma-rays induced initial DNA damage and the effect of famotidine in mouse leukocytes as assayed by the alkaline comet assay. <i>J Radiat Res.</i> 2007 Mar;48(2):129-34. PMID: 17299251.	
F0268	Farnesol	50 ml 100 ml
	$C_{15}H_{26}O$ FW: 222.37 [4602-84-0] $\geq 97\%$ Found in various essential oils. It regulates the volatility of odorants in perfumes. It displays a variety of biological activities, including inducing cell cycle arrest and stimulating p21 and p27 expression in pancreatic adenocarcinoma cells, increasing latency to tumor formation in TPA-induced skin carcinogenesis, and inhibiting growth of <i>Aspergillus</i> and <i>Candida</i>. Wang X, Wang YZ, Zhou Y, et al. Farnesol induces apoptosis-like cell death in the pathogenic fungus <i>Aspergillus</i> flavus. <i>Mycologia.</i> 2014 Jun 3. [Epub ahead of print]. PMID: 24895430.	
F0275	Fasudil Hydrochloride	100 mg 250 mg 1 g
	$C_{14}H_{17}N_3O_2S \cdot HCl$ FW: 327.83 [105628-07-7] $\geq 98\%$ ROCK inhibitor used to treat cerebral vasospasm and hypertension. It decreases myocardial infarction size, inhibits progression of existing aneurysms, and suppresses motor neuron loss in ALS models. Peng C, Gu P, Zhou J, et al. Inhibition of rho-kinase by fasudil suppresses formation and progression of experimental abdominal aortic aneurysms. <i>PLoS One.</i> 2013 Nov 14;8(11):e80145. PMID: 24244631. Takata M, Tanaka H, Kimura M, et al. Fasudil, a rho kinase inhibitor, limits motor neuron loss in experimental models of amyotrophic lateral sclerosis. <i>Br J Pharmacol.</i> 2013 Sep;170(2):341-51. PMID: 23763343.	
F1607	Febuxostat	250 mg 1 g
	$C_{16}H_{16}N_2O_3S$ FW: 316.37 [144060-53-7] $\geq 98\%$ Xanthine oxidase inhibitor used to treat gout. It prevents uric acid generation, decreases oxidative stress, and suppresses the development of fibrosis in models of renal ischemia. Nomura J, Busso N, Ives A, et al. Febuxostat, an Inhibitor of Xanthine Oxidase, Suppresses Lipopolysaccharide-Induced MCP-1 Production via MAPK Phosphatase-1-Mediated Inactivation of JNK. <i>PLoS One.</i> 2013 Sep 25;8(9):e75527. PMID: 24086554. Karve AV, Jagtiani SS, Chitnis KA. Evaluation of effect of allopurinol and febuxostat in behavioral model of depression in mice. <i>Indian J Pharmacol.</i> 2013 May-Jun;45(3):244-7. PMID: 23833366.	
F1745	Felodipine	50 mg 100 mg 250 mg
	$C_{18}H_{19}Cl_2NO_4$ FW: 384.25 [72509-76-3] $\geq 98\%$ L-type Ca²⁺ channel blocker used to treat hypertension. It decreases blood pressure, serum insulin, and circulating macrophage levels. Tan HW, Xing SS, Bi XP, et al. Felodipine attenuates vascular inflammation in a fructose-induced rat model of metabolic syndrome via the inhibition of NF-kappaB activation. <i>Acta Pharmacol Sin.</i> 2008 Sep;29(9):1051-9. PMID: 18718174. Kal JE, Spaan JA, van Wezel HB. Calcium channel blockade with felodipine does not affect metabolic coronary vasodilation in patients with coronary artery disease. <i>J Cardiovasc Pharmacol.</i> 2002 Feb;39(2):225-33. PMID: 11791008.

	Picone P, Nuzzo D, Di Carlo M. Ferulic acid: a natural antioxidant against oxidative stress induced by oligomeric A-beta on sea urchin embryo. <i>Biol Bull</i> . 2013 Feb;224(1):18-28. PMID: 23493505.	
F1670	Ferulic Acid Methyl Ester	1 g 5 g 25 g
	$C_{11}H_{12}O_4$ FW: 208.21 [2309-07-1] $\geq 98\%$	
	Verbascoside metabolite and ion chelator. It decreases oxidative stress and inflammation in diabetic nephropathy models, protects against oxidative damage, decreases levels of NE, DA, 5-HT, and substance P in the hippocampus and frontal cortex, and reverses amyloid- β -induced pathology.	
	Quirantes-Piné R, Herranz-López M, Funes L, et al. Phenylpropanoids and their metabolites are the major compounds responsible for blood-cell protection against oxidative stress after administration of Lippia citriodora in rats. <i>Phytomedicine</i> . 2013 Sep 15;20(12):1112-8. PMID: 23827667.	
	Xu Y, Zhang L, Shao T, et al. Ferulic acid increases pain threshold and ameliorates depression-like behaviors in reserpine-treated mice: behavioral and neurobiological analyses. <i>Metab Brain Dis</i> . 2013 Dec;28(4):571-83. PMID: 23584961.	
F1895	Fexofenadine Hydrochloride	25 mg 100 mg 500 mg
	$C_{32}H_{39}NO_4 \cdot HCl$ FW: 538.12 [153439-40-8] $\geq 98\%$	
	Histamine H1 receptor antagonist used to treat seasonal allergic rhinitis.	
	Compalati E, Baena-Cagnani R, Penagos M, et al. Systematic review on the efficacy of fexofenadine in seasonal allergic rhinitis: a meta-analysis of randomized, double-blind, placebo-controlled clinical trials. <i>Int Arch Allergy Immunol</i> . 2011;156(1):1-15. PMID: 21969990.	
	Smith SM, Gums JG. Fexofenadine: biochemical, pharmacokinetic and pharmacodynamic properties and its unique role in allergic disorders. <i>Expert Opin Drug Metab Toxicol</i> . 2009 Jul;5(7):813-22. PMID: 19545214.	

F3204	Fibrinogen-binding Peptide	5 mg
Glu-His-Ile-Pro-Ala	$C_{25}H_{39}O_8$ FW: 565.63 $\geq 98\%$ GP IIb/IIIa analog and fibrinogen binding inhibitor. Gartner TK, Loudon R, Taylor DB. The peptides APLHK, EHIPA and GAPL are hydropathically equivalent peptide mimics of a fibrinogen binding domain of glycoprotein IIb/IIIa. <i>Biochem Biophys Res Commun.</i> 1991 Nov 14;180(3):1446-52. PMID: 1953789.	
F3205	Fibrinogen γ-chain Dodecapeptide	1 mg 2 mg 5 mg
His-His-Leu-Gly-Gly-Ala-Lys-Gln-Ala-Gly-Asp-Val	$C_{50}H_{80}N_{18}O_{16}$ FW: 1189.29 $\geq 98\%$ Platelet substitute and GP IIb/IIIa activator used as a platelet substitute. It enhances thrombus formation and rescues subjects from hemorrhage. Tokutomi K, Tagawa T, Korenaga M, et al. Ability of fibrinogen γ-derived dodecapeptides with different sequences to bind to rat platelets. <i>Int J Pharm.</i> 2012 Nov 15;438(1-2):296-301. PMID: 22985603. Nishikawa K, Hagisawa K, Kinoshita M, et al. Fibrinogen γ-chain peptide-coated, ADP-encapsulated liposomes rescue thrombocytopenic rabbits from non-compressible liver hemorrhage. <i>J Thromb Haemost.</i> 2012 Oct;10(10):2137-48. PMID: 22905905.	
F3206	Fibrinolysis Inhibiting Factor	1 mg 2 mg 5 mg
Gly-Pro-Arg-Pro	$C_{18}H_{31}N_7O_5$ FW: 425.49 $\geq 98\%$ Fibrinolysis inhibitor that induces acute immune hemolysis in hepatectomy models. Nakatsuji T. Acceleration of thrombosis and hemolysis by fibrinolysis inhibiting factor and suppression by Ia antigen expressed on T cells in partially hepatectomized Lewis rats. <i>Int J Hematol.</i> 1996 Oct;64(3-4):181-8. PMID: 8923779.	
F3208	Fibrinopeptide B, human	1 mg 2 mg 5 mg
pGlu-Gly-Val-Asn-Asp-Asn-Glu-Glu-Gly-Phe-Phe-Ser-Ala-Arg-OH	$C_{66}H_{93}N_{19}O_{25}$ FW: 1552.59 [36204-23-6] $\geq 95\%$ Generated during the formation of fibrin. It is released from thrombin in platelets and may decrease procollagen levels. Tang YQ, Yeaman MR, Selsted ME. Antimicrobial peptides from human platelets. <i>Infect Immun.</i> 2002 Dec;70(12):6524-33. PMID: 12438321. Huang QQ, Teng MK, Niu LW. Purification and characterization of two fibrinogen-clotting enzymes from five-pace snake (<i>Agkistrodon acutus</i>) venom. <i>Toxicon.</i> 1999 Jul;37(7):999-1013. PMID: 10484747.	
F3207	Fibronectin CS-1 Peptide	1 mg 2 mg 5 mg
Glu-Ile-Leu-Asp-Val-Pro-Ser-Thr	$C_{38}H_{64}N_8O_{15}$ FW: 872.97 $\geq 98\%$ $\alpha 4 \beta 1$ Integrin activator. It stimulates proliferation of T cells, decreases infarct size in cerebral ischemia/reperfusion models, and regulates migration and invasion of oral squamous cell carcinoma cells. Kamarajan P, Garcia-Pardo A, D'Silva NJ, et al. The CS1 segment of fibronectin is involved in human OSCC pathogenesis by mediating OSCC cell spreading, migration, and invasion. <i>BMC Cancer.</i> 2010 Jun 25;10:330. PMID: 20579373. Yakubenko VP, Lobb RR, Plow EF, et al. Differential induction of gelatinase B (MMP-9) and gelatinase A (MMP-2) in T lymphocytes upon alpha(4)beta(1)-mediated adhesion to VCAM-1 and the CS-1 peptide of fibronectin. <i>Exp Cell Res.</i> 2000 Oct 10;260(1):73-84. PMID: 11010812.	
F3209	Fibronectin-Binding Protein	0.5 mg 1 mg 2.5 mg
H-Phe-Asn-Lys-Lys-His-Thr-Glu-Ile-Ile-Glu-Glu-Asp-Thr-Asn-Lys-Asp-Lys-Pro-Ser-Tyr-Gln-Phe-Gly-Gly-His-Asn-Ser-Val-Asp-Phe-Glu-Glu-Asp-Thr-Leu-Pro-Lys-Val-OH	$C_{190}H_{283}N_{49}O_{66}$ FW: 4309.66 [119977-20-7] $\geq 95\%$ Binds fibronectin. It is involved in T cell activation, cytokine release, and basophil degranulation. Reginald K, Westritschnig K, Linhart B, et al. <i>Staphylococcus aureus</i> fibronectin-binding protein specifically binds IgE from patients with atopic dermatitis and requires antigen presentation for cellular immune responses. <i>J Allergy Clin Immunol.</i> 2011 Jul;128(1):82-91.e8. PMID: 21513970.	
F3354	Finasteride	100 mg 500 mg
	$C_{23}H_{36}N_2O_2$ FW: 372.54 [98319-26-7] $\geq 98\%$ Steroid 5-α-reductase inhibitor used to treat BPH and male pattern baldness. It decreases testosterone metabolism, inhibits growth of <i>Candida</i>, and suppresses regrowth of regressed prostate tumors Chavez-Dozal AA, Lown L, Jahng M, et al. K0031**Kahweol Acetate** $C_{22}H_{28}O_4$ FW: 356.47 [81760-47-6] $\geq 98\%$

Semi-synthetic derivative of kahweol, a natural product found in coffee beans. It exhibits a wide variety of biological activities, including inhibiting RANKL-induced osteoclast generation, inducing cell cycle arrest and apoptosis in oral squamous cell carcinoma cells, preventing aflatoxin B1-induced DNA adduct formation, and suppressing H_2O_2 -induced DNA damage and oxidative stress.

Chae JJ, Jeon YJ, Shim JH. Anti-Proliferative Properties of Kahweol in Oral Squamous Cancer Through the Regulation Specificity Protein 1. *Phytother Res*. 2014 Sep 8. [Epub ahead of print]. PMID: 25196544.

L0109

Lactalbumin

500 g
1 kg

[9013-90-5] ≥80%

Cation and fatty acid chelator found in milk and whey. It protects against stress-induced gastric injury.

Barbana C, Sánchez L, Pérez MD. Bioactivity of α-lactalbumin related to its interaction with fatty acids: a review. Crit Rev Food Sci Nutr. 2011 Sep;51(8):783-94. PMID: 21838558.

Matsumoto H, Shimokawa Y, Ushida Y, et al. New biological function of bovine alpha-lactalbumin: protective effect against ethanol- and stress-induced gastric mucosal injury in rats. Biosci Biotechnol Biochem. 2001 May;65(5):1104-11. PMID: 11440124.

L0209

Lactoferrin, cow

10 mg
50 mg
100 mg

90 kDa [146897-68-9] ≥92%

Endogenous glycoprotein and lactoferrin receptor agonist. It binds DNA and inhibits carcinogenesis in several cancer development models and suppresses growth of gram negative bacteria, *Candida*, rotavirus, herpesvirus, HIV, and cytomegalovirus.

Farnaud S, Evans RW. Lactoferrin—a multifunctional protein with antimicrobial properties. Mol Immunol. 2003 Nov;40(7):395-405. PMID: 14568385.

Viejo-Díaz M, Andrés MT, Fierro JF. Modulation of in vitro fungicidal activity of human lactoferrin against *Candida albicans* by extracellular cation concentration and target cell metabolic activity. Antimicrob Agents Chemother. 2004 Apr;48(4):1242-8. PMID: 15047526.

L0211

Lactulose

10 g
25 g

C₁₂H₂₂O₁₁ FW: 342.3 [4618-18-2] ≥98%

Synthetic non-digestible disaccharide used to treat constipation and hepatic encephalopathy-induced hyperammonemia. It induces water retention.

Panesar PS, Kumari S. Lactulose: production, purification and potential applications. Biotechnol Adv. 2011 Nov-Dec;29(6):940-8. PMID: 21856402.

Shukla S, Shukla A, Mehboob S, et al. Meta-analysis: the effects of gut flora modulation using prebiotics, probiotics and synbiotics on minimal hepatic encephalopathy. Aliment Pharmacol Ther. 2011 Mar;33(6):662-71. PMID: 21251030.

L0226

Lagochiline

25 mg
100 mg

C₂₀H₃₆O₅ FW: 356.6 ≥98%

Found in *Lagochilus*. It may induce sedation and vasodilation.

Pulatova TP, Khazanovich RL. On the alkaloid content of some *Lagochilus* species and on the nature of lagochiline. Aptechin Delo. 1962 Nov-Dec;6:29-32. PMID: 13972488.

Laminin Peptide CDPGYIGSR

1 mg
5 mg

C₄₀H₆₂N₁₂O₁₄S FW: 967.06 [110590-60-8] ≥98%

Peptide found on the B1 chain of laminin (925-933) that activates nonselective cation channels. It is used in combination with chemotherapeutics to deliver the drug to target tumor tissues. It inhibits angiogenesis and cancer cell growth and induces vasoconstriction in vascular smooth muscle cells.

Wenzel D, Koch M, Matthey M, et al. Identification of a novel vasoconstrictor peptide specific for the systemic circulation. Hypertension. 2012 Jun;59(6):1256-62. PMID: 22547445.

Sakamoto N, Iwahana M, Tanaka NG, et al. Inhibition of angiogenesis and tumor growth by a synthetic laminin peptide, CDPGYIGSR-NH2. Cancer Res. 1991 Feb 1;51(3):903-6. PMID: 1703042.

Cys-Asp-Pro-Gly-Tyr-Ile
Gly-Ser-Arg

L0250

Laminin Peptide SIKVAV

1 mg
5 mg

C₈₂H₁₄₈N₃₁O₂₆S FW: 2016.3 ≥98%

Peptide found on the A1 chain of laminin. It is used in combination with chemotherapeutics to deliver the drug to target tumor tissues. It increases vessel formation and migration.

Stevenson M, Hale AB, Hale SJ, et al. Incorporation of a laminin-derived peptide (SIKVAV) on polymer-modified adenovirus permits tumor-specific targeting via alpha6-integrins. Cancer Gene Ther. 2007 Apr;14(4):335-45. PMID: 17235355.

Freitas VM, Scheremeta B, Hoffman MP, et al. Laminin-1 and SIKVAV a laminin-1-derived peptide, regulate the morphology and protease activity of a human salivary gland adenoid cystic carcinoma cell line. Oral Oncol. 2004 May;40(5):483-9. PMID: 15006619.

It decreases levels of CXCL10 and downregulates expression of IFNγ receptors. Rivkees SA. Pediatric Graves' disease: management in the post-propylthiouracil Era. <i>Int J Pediatr Endocrinol</i>. 2014;2014(1):10. PMID: 25089127. Manna D, Roy G, Mughesh G. Antithyroid drugs and their analogues: synthesis, structure, and mechanism of action. <i>Acc Chem Res</i>. 2013 Nov 19;46(11):2706-15. PMID: 23883148. Crescioli C, Cosmi L, Borgogni E, et al. Methimazole inhibits CXCL chemokine ligand 10 secretion in human thyrocytes. <i>J Endocrinol</i>. 2007 Oct;195(1):145-55. PMID: 17911406.
M1978 	S-(+)-Methoprene $C_{19}H_{34}O_3$ FW: 310.47 [65733-16-6] $\geq 95\%$ 25 mg 100 mg Juvenile insect growth hormone analog that prohibits the ability of the insect to change from pupae to adult. It is used to control mosquito populations. It alters Ca^{2+} signaling and redox activity of cytochrome oxidase and induces male sex differentiation. Monteiro JP, Jurado AS, Moreno AJ, et al. Toxicity of methoprene as assessed by the use of a model microorganism. <i>Toxicol In Vitro</i>. 2005 Oct;19(7):951-6. PMID: 16081242. Olmstead AW, LeBlanc GA. Insecticidal juvenile hormone analogs stimulate the production of male offspring in the crustacean <i>Daphnia magna</i>. <i>Environ Health Perspect</i>. 2003 Jun;111(7):919-24. PMID: 12782492.

M1676	Methotrexate Hydrate	10 mg
	Amethopterin; MTX $C_{20}H_{22}N_6O_5 \cdot H_2O$ FW: 472.45 [6745-93-3] $\geq 98\%$ DHF reductase inhibitor used to treat rheumatoid arthritis, ectopic pregnancy, and various cancers. It prevents synthesis of thymidine, RNA, and RNA. It also increases T cell apoptosis, decreases T cell activation, and suppresses cytokine production.	50 mg 100 mg 500 mg
Herfarth HH, Long MD, Isaacs KL. Methotrexate: underused and ignored? Dig Dis. 2012;30 Suppl 3:112-8. doi: 10.1159/000342735. PMID: 23295701.		
Mol F, Mol BW, Ankum WM, et al. Current evidence on surgery, systemic methotrexate and expectant management in the treatment of tubal ectopic pregnancy: a systematic review and meta-analysis. Hum Reprod Update. 2008 Jul-Aug;14(4):309-19. PMID: 18522946.		
Wessels JA, Huizinga TW, Guchelaar HJ. Recent insights in the pharmacological actions of methotrexate in the treatment of rheumatoid arthritis. Rheumatology (Oxford). 2008 Mar;47(3):249-55. PMID: 18045808.		
M1874	3-Methyladenine	NEW
	3-MA; NSC 66389 $C_6H_7N_5$ FW: 149.15 [5142-23-4] $\geq 98\%$ Adenine analog and DNA polymerase inhibitor. It inhibits autophagy and DNA synthesis.	25 mg 100 mg 500 mg
Ramírez C, Pham K, Franco MF, et al. Hydroquinone induces oxidative and mitochondrial damage to human retinal Müller cells (MIO-M1). Neurotoxicology. 2013 Dec;39:102-8. PMID: 23994029.

M1776	α-Methylbenzyl Isothiocyanate	5 g
	C_9H_9NS FW: 163.24 [32393-32-1] $\geq 98\%$ Antioxidant that induces phase II enzyme activity.	10 g
Munday R, Zhang Y, Munday CM, et al. Structure-activity relationships and organ specificity in the induction of GST and NQO1 by alkyl-aryl isothiocyanates. Pharm Res. 2008 Sep;25(9):2164-70. PMID: 18563540.		
M1777	R-(−)-α-Methylbenzyl Isothiocyanate	1 g
	C_9H_9NS FW: 163.24 [24277-44-9] $\geq 98\%$ Antioxidant that induces phase II enzyme activity. It is also used as a chiral agent.	5 g 10 g
Munday R, Zhang Y, Munday CM, et al. Structure-activity relationships and organ specificity in the induction of GST and NQO1 by alkyl-aryl isothiocyanates. Pharm Res. 2008 Sep;25(9):2164-70. PMID: 18563540.		
M1778	S-(+)-α-Methylbenzyl Isothiocyanate	1 g
	C_9H_9NS FW: 163.24 [24277-43-8] $\geq 98\%$ Antioxidant that induces phase II enzyme activity. It is also used as a chiral agent.	5 g 10 g
Munday R, Zhang Y, Munday CM, et al. Structure-activity relationships and organ specificity in the induction of GST and NQO1 by alkyl-aryl isothiocyanates. Pharm Res. 2008 Sep;25(9):2164-70. PMID: 18563540.		
M1560	Methyl Caffate	50 mg
	3,4-Dihydroxycinnamic acid methylester $C_{10}H_{10}O_4$ FW: 194.19 [3843-74-1] $\geq 98\%$ α-Glucosidase inhibitor found in species of <i>Solanum</i> and <i>Magnolia</i>. It exhibits several biological activities, including suppressing growth of <i>Pseudomonas</i>, <i>Klebsiella</i>, and <i>Mycobacterium</i>, inhibiting replication of HIV, and decreasing blood glucose levels in models of diabetes.	100 mg 500 mg
Balachandran C, Duraipandiyan V, Al-Dhabi NA, et al. Antimicrobial and Antimycobacterial Activities of Methyl Caffate Isolated from <i>Solanum torvum</i> Swartz. Fruit. Indian J Microbiol. 2012 Dec;52(4):676-81. PMID: 24293730.		
Gandhi GR, Ignacimuthu S, Paulraj MG, et al. Antihyperglycemic activity and antidiabetic effect of methyl caffate isolated from <i>Solanum torvum</i> Swartz. fruit in streptozotocin induced diabetic rats. Eur J Pharmacol. 2011 Nov 30;670(2-3):623-31. PMID: 21963451.		
Takahashi K, Yoshioka Y, Kato E, et al. Methyl caffate as an alpha-glucosidase inhibitor from <i>Solanum torvum</i> fruits and the activity of related compounds. Biosci Biotechnol Biochem. 2010;74(4):741-5. PMID: 20378981.		

M1876	16-O-Methylcafestol	10 mg
	$C_{21}H_{30}O_3$ FW: 330.46 $\geq 98\%$ Natural cafestol derivative found in coffee beans. It may prevent oxidative damage, inflammation, or cancer cell proliferation. Liao XL, Chen XZ, Yu KB, et al. 16-O-Methyl-cafestol. Acta Crystallogr Sect E Struct Rep Online. 2010 Mar 6;66(Pt 4):o760. PMID: 21580605. Mensink RP, Lebbink WJ, Lobbezoo IE, et al. Diterpene composition of oils from Arabica and Robusta coffee beans and their effects on serum lipids in man. J Intern Med. 1995 Jun;237(6):543-50. PMID: 7782725.	25 mg 100 mg
M1564	S-Methyl-L-cysteine	1 g
	SMLC $C_4H_9NO_2S$ FW: 135.18 [1187-84-4] $\geq 99\%$ Antioxidant found in <i>Brassicaceae</i> family plants. It decreases oxidative stress and inhibits oil drop formation in white pre-adipose tissue. Ishiwa S, Ogata S, Umino A, et al. Increasing effects of S-methyl-L-cysteine on the extracellular D-serine concentrations in the rat medial frontal cortex. Amino Acids. 2013 May;44(5):1391-5. PMID: 23417484. Yoshinari O, Shiojima Y, Igarashi K. Anti-obesity effects of onion extract in Zucker diabetic fatty rats. Nutrients. 2012 Oct 22;4(10):1518-26. PMID: 23201769. Wassef R, Haenold R, Hansel A, et al. Methionine sulfoxide reductase A and a dietary supplement S-methyl-L-cysteine prevent Parkinson's-like symptoms. J Neurosci. 2007 Nov 21;27(47):12808-16. PMID: 18032652.	5 g 25 g
M1565	(±)-S-Methyl-L-cysteine-S-oxide	100 mg
	Methiini; Pyrolyzate $C_4H_9NO_3S$ FW: 151.19 [6853-87-8] $\geq 98\%$ Synthetic analog of alliin found in cruciferous vegetables. Stevenon GB. Diurnal variation in the metabolism of S-carboxymethyl-L-cysteine in humans. Drug Metab Dispos. 1999 Sep;27(9):1092-7. PMID: 10460812. Syngé RL, Wood JC. (+)-(S-methyl-L-cysteine S-oxide) in cabbage. Biochem J. 1956 Oct;64(2):252-9. PMID: 13363835.	250 mg 1 g
M1566	(+)-S-Methyl-L-cysteine-S-oxide	5 mg
	Methiini; Pyrolyzate $C_4H_9NO_3S$ FW: 151.19 $\geq 98\%$ Alliin analog found in cruciferous vegetables. It decreases plasma glucose levels, suppresses endogenous lipogenesis, and increases lipid catabolism. Kook S, Kim GH, Choi K. The antidiabetic effect of onion and garlic in experimental diabetic rats: meta-analysis. J Med Food. 2009 Jun;12(3):552-60. PMID: 19627203. Kumari K, Augusti KT. Lipid lowering effect of S-methyl cysteine sulfoxide from Allium cepa Linn in high cholesterol diet fed rats. J Ethnopharmacol. 2007 Feb 12;109(3):367-71. PMID: 16987625. Kumari K, Augusti KT. Antidiabetic and antioxidant effects of S-methyl cysteine sulfoxide isolated from onions (Allium cepa Linn) as compared to standard drugs in alloxan diabetic rats. Indian J Exp Biol. 2002 Sep;40(9):1005-9. PMID: 12587728.	25 mg 100 mg
M1779	Methyldopa Sesquihydrate	1 g
	Methyl-L-DOPA; MK-351 $C_{10}H_{13}NO_4 \cdot 3/2H_2O$ FW: 238.24 [41372-08-1] $\geq 98\%$ DOPA decarboxylase inhibitor and indirect α_2 -adrenergic receptor agonist used to treat hypertension. It inhibits the sympathetic nervous system, decreases production of dopamine, norepinephrine, and epinephrine, and exhibits NO-dependent sedative activity. Sucak A, Kanat-Pektas M, Gungor T, et al. Leptin levels and antihypertensive treatment in preeclampsia. Singapore Med J. 2010 Jan;51(1):39-43. PMID: 20200774. Soares de Moura R, Rios AA, et al. The effects of nitric oxide synthase inhibitors on the sedative effect of clonidine. Anesth Analg. 2001 Nov;93(5):1217-21. PMID: 11682401.	5 g 10 g
M1878	16-O-Methylkahweol	5 mg
	$C_{21}H_{28}O_3$ FW: 328.45 $\geq 98\%$ Natural kahweol derivative found in coffee beans. It may prevent oxidative damage, inflammation, or cancer cell proliferation. Mensink RP, Lebbink WJ, Lobbezoo IE, et al. Diterpene composition of oils from Arabica and Robusta coffee beans and their effects on serum lipids in man. J Intern Med. 1995 Jun;237(6):543-50. PMID: 7782725.	10 mg 50 mg

M3232 	Methylisoindigotin Meisoindigo $C_{17}H_{12}N_2O_2$ FW: 276.3 [97207-47-1] $\geq 98\%$ Indirubin derivative. It inhibits proliferation of leukemia cells, induces apoptosis in colon cancer cells, and decreases production of pro-inflammatory cytokines. Huang M, Lin HS, Lee YS, et al. Evaluation of meisoindigo, an indirubin derivative: in vitro antileukemic activity and in vivo pharmacokinetics. <i>Int J Oncol.</i> 2014 Oct;45(4):1724-34. PMID: 25050545. Zhang HJ, Zhang Y, Jin J, et al. Mechanism about therapeutic effect of meisoindigo on psoriasis via down-regulation of the TLR4-TAK-NF-kappaB pathways. <i>Yao Xue Xue Bao.</i> 2013 Apr;48(4):503-7. PMID: 23833936. Zuo MX, Li Y, Zhou JH, et al. Effect of Meisoindigo on Wnt signal pathway in K562 and HL-60 cells. <i>Zhongguo Shi Yan Xue Ye Xue Za Zhi.</i> 2010 Jun;18(3):579-82. PMID: 20561405.	NEW 10 mg 50 mg
M1575 	7-Methyl-6-mercaptopurine $C_6H_6N_4S$ FW: 166.21 [3324-79-6] $\geq 87\%$ 6-Mercaptopurine derivative and inhibitor of PRPP amidotransferase used to treat autoimmune diseases, leukemias, and lymphomas. It inhibits IMP metabolism, preventing the synthesis of purines, DNA, and RNA. Bradford K, Shih DQ. Optimizing 6-mercaptopurine and azathioprine therapy in the management of inflammatory bowel disease. <i>World J Gastroenterol.</i> 2011 Oct 7;17(37):4166-73. PMID: 22072847. Nielsen OH, Vainer B, Rask-Madsen J. Review article: the treatment of inflammatory bowel disease with 6-mercaptopurine or azathioprine. <i>Aliment Pharmacol Ther.</i> 2001 Nov;15(11):1699-708. PMID: 11683683.	10 mg 50 mg 100 mg 500 mg
M1678 	2-Methoxyestradiol $C_{19}H_{26}O_3$ FW: 302.41 [362-07-2] $\geq 98\%$ Estradiol metabolite and microtubule depolymerization inhibitor. It decreases tumor growth, VEGF expression, and angiogenesis in hepato-cellular carcinoma models, lowers mean arterial blood pressure, and prevents TGF- β 3-induced fibrosis. Yuan W, Yu Y, Li J, et al. Estrogen metabolite 2-methoxyestradiol prevents hypertension in deoxycorticosterone acetate-salt rats. <i>Cardiovasc Drugs Ther.</i> 2013 Feb;27(1):17-22. PMID: 23229845. Salama SA, Diaz-Arrastia CR, Kilic GS, et al. 2-Methoxyestradiol causes functional repression of transforming growth factor β 3 signaling by ameliorating Smad and non-Smad signaling pathways in immortalized uterine fibroid cells. <i>Fertil Steril.</i> 2012 Jul;98(1):178-84. PMID: 22579131.	5 mg 10 mg 50 mg
M1680 	5-Methoxyindole C_9H_9NO FW: 147.17 [1006-94-6] $\geq 98\%$ Melatonin derivative and potential PPAR γ and 5-HT3 agonist. Czimmerer Z, Varga T, Poliska S, et al. Identification of novel markers of alternative activation and potential endogenous PPAR γ ligand production mechanisms in human IL-4 stimulated differentiating macrophages. <i>Immunobiology.</i> 2012 Dec;117(12):1301-14. PMID: 22954708. Koike T, Hoashi Y, Takai T, et al. 1,6-Dihydro-2H-indeno[5,4-b]furan derivatives: design, synthesis, and pharmacological characterization of a novel class of highly potent MT2-selective agonists. <i>J Med Chem.</i> 2011 May 12;54(9):3436-44. PMID: 21473625.	1 g 5 g 25 g
M1677 	11-Methoxyyangonin $C_{16}H_{16}O_5$ FW: 288.3 $\geq 98\%$ Found in <i>Piper methysticum</i> (kava plant). Hänsel R, Klaproth L. Isolation of 11-methoxy-yangonin from the cava root. <i>Arch Pharm Ber Dtsch Pharm Ges.</i> 1966 Jun;299(6):503-6. PMID: 5228634.	5 mg 10 mg
M1877 	Methylprednisolone $C_{22}H_{30}O_5$ FW: 374.47 [83-43-2] $\geq 96\%$ Synthetic glucocorticoid receptor agonist used to treat inflammation and autoimmune diseases. It decreases survival of activated CD4+ T cells, inhibits oxidative stress-induced apoptosis, and suppresses release of inflammatory cytokines. Lu YS, Pu LY, Li XC, et al. Methylprednisolone inhibits activated CD4+ T cell survival promoted by toll-like receptor ligands. <i>Hepatobiliary Pancreat Dis Int.</i> 2010 Aug;9(4):376-83. PMID: 20688601. Das A, Bank NL, Ray SK. Methylprednisolone and indomethacin inhibit oxidative stress mediated apoptosis in rat C6 glioblastoma cells. <i>Neurochem Res.</i> 2007 Nov;32(11):1849-56. PMID: 17570061.	100 mg 500 mg 1 g

M1979	Methyl Salicylate	250 mL 500 mL 1 L
	$C_8H_8O_3$ FW: 152.15 [119-36-8] $\geq 98\%$ TRPV1 modulator found in <i>Spiraea</i>, <i>Betula</i>, and <i>Gaultheria</i> commercially used as an antiseptic, flavorant, and fragrance. Derivatives of this compound inhibit pain and inflammation. Tieman D, Zeigler M, Schmeltz E, et al. Functional analysis of a tomato salicylic acid methyl transferase and its role in synthesis of the flavor volatile methyl salicylate. <i>Plant J.</i> 2010 Apr 1;62(1):113-23. PMID: 20070566. Ohta T, Imagawa T, Ito S. Involvement of transient receptor potential vanilloid subtype 1 in analgesic action of methylsalicylate. <i>Mol Pharmacol.</i> 2009 Feb;75(2):307-17. PMID: 18987162.	
M1875	S-(N-Methylsulfinylbutylthiocarbamoyl)-glutathione	5 mg 10 mg 25 mg
	Sulforaphane glutathione conjugate $C_{16}H_{28}N_4O_7S_3$ FW: 484.61 $\geq 98\%$ Glutathione-sulforaphane conjugate and antioxidant. It increases levels of HO-1 and Nrf2 and decreases levels of Bcl-xl, mTOR, and cyclin D1. Keum YS, Khor TO, Lin W, et al. Pharmacokinetics and pharmacodynamics of broccoli sprouts on the suppression of prostate cancer in transgenic adenocarcinoma of mouse prostate (TRAMP) mice: implication of induction of Nrf2, HO-1 and apoptosis and the suppression of Akt-dependent kinase pathway. <i>Pharm Res.</i> 2009 Oct;26(10):2324-31. PMID: 19669099.	
M1873	S-(N-Methylsulfinylbutylthiocarbamoyl)-L-cysteine	5 mg 10 mg 25 mg
	L-Cysteine sulforaphane $C_9H_{18}N_2O_3S_3$ FW: 298.45 $\geq 98\%$ Conjugate of sulforaphane and L-cysteine. It may decrease oxidative damage.	
M1975	S-(N-Methylthiocarbamoyl)-L-cysteine	10 mg 25 mg 100 mg
	Methylisothiocyanate-L-cysteine $C_5H_{10}N_2O_2S_2$ FW: 194.28 $\geq 98\%$ Cysteine-methylisothiocyanate conjugate, antioxidant, and aldehyde dehydrogenase inhibitor. It may display a wide variety of biological activities, including inhibiting hatch of <i>Heterodera</i>, increasing aldehyde levels in blood and brain, and inducing lipid peroxidation-mediated DNA damage.	
M1679	Methysticin	5 mg 10 mg
	Kavatin $C_{15}H_{14}O_3$ FW: 274.27 [495-85-2] $\geq 98\%$ Found in <i>Piper methysticum</i> (kava plant). It inhibits activation of NF-κB in lung adenocarcinoma tissue, activates Nrf2 in neurons and astroglia, decreases peak amplitude of voltage-gated Na⁺ channels in hippocampal neurons, and suppresses growth of <i>Fusarium</i>, <i>Trichoderma</i>, and <i>Colletotrichum</i>. Shaik AA, Hermanson DL, Xing C. Identification of methysticin as a potent and non-toxic NF-kappaB inhibitor from kava, potentially responsible for kava's chemopreventive activity. <i>Bioorg Med Chem Lett.</i> 2009 Oct 1;19(19):5732-6. PMID: 19716299. Wruck CJ, Götz ME, Herdegen T, et al. Kavalactones protect neural cells against amyloid beta peptide-induced neurotoxicity via extracellular signal-regulated kinase 1/2-dependent nuclear factor erythroid 2-related factor 2 activation. <i>Mol Pharmacol.</i> 2008 Jun;73(6):1785-95. PMID: 18334601.	
M1879	Metoprolol Tartrate	5 g 25 g
	$(C_{15}H_{25}NO_3)_2 \cdot C_4H_6O_6$ FW: 684.82 [56392-17-7] $\geq 98\%$ β1-Adrenergic antagonist used to treat hypertension, myocardial infarction, tachycardia, and congestive heart failure. It decreases size of atherosclerotic plaques, inhibits seizures, and increases microvessel sprouting in aortic rings. Ulleryd MA, Bernberg E, Yang LJ, et al. Metoprolol Reduces Proinflammatory Cytokines and Atherosclerosis in ApoE(-/-) Mice. <i>Biomol Res Int.</i> 2014;2014:548783. PMID: 25105129. Borowicz KK, Banach M. Antiarrhythmic drugs and epilepsy. <i>Pharmacol Rep.</i> 2014 Aug;66(4):545-51. PMID: 24948053. Stati T, Musumeci M, Maccari S, et al. β-Blockers promote angiogenesis in the mouse aortic ring assay. <i>J Cardiovasc Pharmacol.</i> 2014 Jul;64(1):21-7. PMID: 24621648.	

M3196 	MHY-1485 $C_{17}H_{21}N_7O_4$ FW: 387.4 [326914-06-1] $\geq 98\%$ NEW 5 mg 25 mg Activator of mTOR. It inhibits autophagy and increases ovarian explant weights, follicle development, and production of viable, mature oocytes. Li C, Siragy HM. (Pro)renin receptor regulates autophagy and apoptosis in podocytes exposed to high glucose. <i>Am J Physiol Endocrinol Metab</i>. 2015 Jun 16. [Epub ahead of print]. PMID: 26081285. Cheng Y, Kim J, Li XX, et al. Promotion of ovarian follicle growth following mTOR activation: synergistic effects of AKT stimulators. <i>PLoS One</i>. 2015 Feb 24;10(2):e0117769. PMID: 25710488. Choi YJ, Park YJ, Park JY, et al. Inhibitory effect of mTOR activator MHY1485 on autophagy: suppression of lysosomal fusion. <i>PLoS One</i>. 2012;7(8):e43418. Erratum in: <i>PLoS One</i>. 2013;8(1). PMID: 22927967.
M3309 	Miconazole $C_{18}H_{14}Cl_4N_2O$ FW: 416.14 [22916-47-8] $\geq 98\%$ 1 g 5 g 25 g 14-α Demethylase inhibitor and potential glucocorticoid antagonist that inhibits ergosterol synthesis and fungal cell wall formation. It is used to treat fungal infections by pathogens such as <i>Candida</i>. It also decreases expression of HIF-1α and VEGF in breast cancer and glioma cells. Park JY, Jung HJ, Seo I, et al. Translational suppression of HIF-1α by miconazole through the mTOR signaling pathway. <i>Cell Oncol (Dordr)</i>. 2014 Jul 29. [Epub ahead of print]. PMID: 25070654. Niimi M, Firth NA, Cannon RD. Antifungal drug resistance of oral fungi. <i>Odontology</i>. 2010 Feb;98(1):15-25. PMID: 20155503. Duret C, Daujat-Chavanieu M, Pascussi JM, et al. Ketoconazole and miconazole are antagonists of the human glucocorticoid receptor: consequences on the expression and function of the constitutive androstane receptor and the pregnane X receptor. <i>Mol Pharmacol</i>. 2006 Jul;70(1):329-39. PMID: 16608920.
M3310 	Miconazole Nitrate $C_{18}H_{14}Cl_4N_2 \cdot HNO_3$ FW: 479.15 [22832-87-7] $\geq 98\%$ 1 g 5 g 25 g 14-α Demethylase inhibitor and potential glucocorticoid receptor antagonist that inhibits ergosterol synthesis and fungal cell wall formation. It is used to treat fungal infections and is especially active against <i>Candida</i>. It also decreases expression of HIF-1α and VEGF in breast cancer and glioma cells. Park JY, Jung HJ, Seo I, et al. Translational suppression of HIF-1α by miconazole through the mTOR signaling pathway. <i>Cell Oncol (Dordr)</i>. 2014 Jul 29. [Epub ahead of print]. PMID: 25070654. Niimi M, Firth NA, Cannon RD. Antifungal drug resistance of oral fungi. <i>Odontology</i>. 2010 Feb;98(1):15-25. PMID: 20155503.
M3410 	Microcystin (N-Me)-LR $C_{50}H_{76}N_{10}O_{12}$ FW: 1009.3 [1865776-22-2] $\geq 95\%$ 25 μg Derivative of microcystin LR, PP1/2A inhibitor, and potential GSK-3β activator found in <i>Microcystis</i>. It induces apoptosis in testicular cells, stimulates cytoskeletal reorganization, causes oxidative damage, and produces cognitive deficits. Zhou Y, Chen Y, Yuan M, et al. In vivo study on the effects of microcystin-LR on the apoptosis, proliferation and differentiation of rat testicular spermatogenic cells of male rats injected i.p. with toxins. <i>J Toxicol Sci</i>. 2013;38(5):661-70. PMID: 24025782. Sun Y, Liu JH, Huang P, et al. Alterations of tau and VASP during microcystin-LR-induced cytoskeletal reorganization in a human liver cell line. <i>Environ Toxicol</i>. 2013 Aug 9. doi: [Epub ahead of print]. PMID: 23929704. Zhang H, Cai C, Fang W, et al. Oxidative damage and apoptosis induced by microcystin-LR in the liver of <i>Rana nigromaculata</i> in vivo. <i>Aquat Toxicol</i>. 2013 Sep 15;140-141:11-8. PMID: 23747548.
M3406 	Microcystin-LR $C_{49}H_{74}N_{10}O_{12}$ FW: 995.17 [101043-37-2] $\geq 95\%$ NEW 100 μg PP1/2A inhibitor and potential GSK-3β activator found in <i>Microcystis</i>. It induces apoptosis in testicular cells, stimulates cytoskeletal reorganization, causes oxidative damage, and produces cognitive deficits. Zhou Y, Chen Y, Yuan M, et al. In vivo study on the effects of microcystin-LR on the apoptosis, proliferation and differentiation of rat testicular spermatogenic cells of male rats injected i.p. with toxins. <i>J Toxicol Sci</i>. 2013;38(5):661-70. PMID: 24025782. Sun Y, Liu JH, Huang P, et al. Alterations of tau and VASP during microcystin-LR-induced cytoskeletal reorganization in a human liver cell line. <i>Environ Toxicol</i>. 2013 Aug 9. doi: [Epub ahead of print]. PMID: 23929704.

M3407 	Microcystin-RR $C_{49}H_{75}N_{13}O_{12}$ FW: 1038.2 [111755-37-4] $\geq 95\%$ PP1/2A inhibitor and potential GSK-3 β activator found in <i>Microcystis</i> . M3430	Micropeptin 1106	NEW	100 µg
	$C_{54}H_{79}N_{11}O_{14}$ FW: 1106.27 Serine protease and PP inhibitor found in <i>Microcystis</i> . It is cytotoxic. Schwarzenberger A, Sadler T, Von Elert E. Effect of nutrient limitation of cyanobacteria on protease inhibitor production and fitness of <i>Daphnia magna</i> . J Exp Biol. 2013 Oct 1;216(Pt 19):3649-55. PMID: 23788705. Yamaki H, Sitachitta N, Sano T, et al. Two new chymotrypsin inhibitors isolated from the Cyanobacterium <i>Microcystis aeruginosa</i> NIES-88. J Nat Prod. 2005 Jan;68(1):14-8. PMID: 15679310. Ploutno A, Shoshan M, Carmeli S. Three novel protease inhibitors from a natural bloom of the cyanobacterium <i>Microcystis aeruginosa</i> . J Nat Prod. 2002 Jul;65(7):973-8. PMID: 12141855.	≥95%	
M3219	Tyr-MIF-1		5 mg 10 mg 25 mg
H-Tyr-Pro-Leu-Gly-NH ₂	$C_{22}H_{33}N_3O_3$ FW: 447.54 [77133-61-0] MIF-1 family µOR antagonist. It inhibits opioid-induced antinociception and analgesia and increases gastric motility. Pan W, Kastin AJ. From MIF-1 to endomorphin: the Tyr-MIF-1 family of peptides. Peptides. 2007 Dec;28(12):2411-34. PMID: 17988762.	≥95%	
M3220	Tyr-W-MIF-1		5 mg 10 mg 25 mg
H-Tyr-Pro-Trp-Gly-NH ₂	$C_{27}H_{32}N_6O_3$ FW: 520.59 [144450-13-5] MIF-1 family µOR-2 antagonist. It inhibits analgesic and antinociceptive activities of opioids, suppresses stress-induced secretion of corticosterone and ACTH, and potentially modulates reward processing. Mizoguchi H, Takagi H, Watanabe C, et al. Involvement of multiple µ-opioid receptor subtypes on the presynaptic or postsynaptic inhibition of spinal pain transmission. Peptides. 2013 Oct 25. pii: S0196-9781(13)00344-6. PMID: 24512946. Bocheva A, Dzambazova E, Hadjiolova R, et al. Effect of Tyr-MIF-1 peptides on blood ACTH and corticosterone concentration induced by three experimental models of stress. Auton Autacoid Pharmacol. 2008 Oct;28(4):117-23. PMID: 18798907.	≥95%	
M3321	Mifepristone		100 mg 500 mg 1 g
	$C_{29}H_{35}NO_2$ FW: 429.59 [84371-65-3] Synthetic progesterone and glucocorticoid receptor antagonist used in contraceptives to prevents ovulation and induce endometrial decidual degeneration. It also protects against against oxidative stress and cell death induced by amyloid-β, glutamate, and H ₂ O ₂ and improves cognitive function, working memory, and spatial memory. Fiala C, Gemzel-Danielsson K. Review of medical abortion using mifepristone in combination with a prostaglandin analogue. Contraception. 2006 Jul;74(1):66-86. PMID: 16781264. Young AH, Gallagher P, Watson S, et al. Improvements in neurocognitive function and mood following adjunctive treatment with mifepristone (RU-486) in bipolar disorder. Neuropsychopharmacology. 2004 Aug;29(8):1538-45. PMID: 15127079.	≥98%	
M3344	Milrinone		10 mg 50 mg 100 mg
	$C_{12}H_9N_3O$ FW: 211.22 [78415-72-2] PDE3 inhibitor used to treat heart failure. It inhibits platelet aggregation and increases cAMP, PKA activation, and Ca ²⁺ influx. Hiramatsu N, Kageyama K. Anti-thrombotic effect of milrinone is caused by inhibition of calcium release from the dense tubular system in human platelets. Acta Anaesthesiol Scand. 2003 Jan;47(1):53-7. PMID: 12492797.	≥98%	
M3353	Minocycline Hydrochloride		100 mg 250 mg 500 mg
	$C_{23}H_{27}N_3O_7 \cdot HCl$ FW: 493.94 [13614-98-7] Inhibitor of 5-lopoxxygenase, MMPs, and protein translation used to treat bacterial skin infections. It also reduces hemorrhagic transformation after stroke, attenuates isoflurane-induced cognitive impairment, and inhibits T cell signaling in immune disorders. Mora M, Medina-Leendertz SJ, Bonilla E, et al. Minocycline, but not ascorbic acid, increases motor activity and extends the life span of <i>Drosophila melanogaster</i> . Invest Clin. 2013 Jun;54(2):161-70. PMID: 23947005. Blacker DJ, Prentice D, Alvaro A, et al. Reducing haemorrhagic transformation after thrombolysis for stroke: a strategy utilising minocycline. Stroke Res Treat. 2013;2013:362961. PMID: 23691430. Kong F, Chen S, Cheng Y, et al. Minocycline attenuates cognitive impairment induced by isoflurane anesthesia in aged rats. PLoS One. 2013 Apr 17;8(4):e61385. PMID: 23613842.	≥98%	

M3453**Minoxidil** $C_9H_{15}N_5O$

FW: 209.25

[38304-91-5]

 $\geq 98\%$ **100 mg****500 mg****1 g**

NO donor and androgen receptor antagonist used to treat hair loss. It increases blood and nutrient flow to hair follicles.

Hsu CL, Liu JS, Lin AC, et al. Minoxidil may suppress androgen receptor-related functions. *Oncotarget*. 2014 Apr 30;5(8):2187-97. PMID: 24742982.

Rossi A, Cantisani C, Melis L, et al. Minoxidil use in dermatology, side effects and recent patents. *Recent Pat Inflamm Allergy Drug Discov*. 2012 May;6(2):130-6. PMID: 22409453.

M3368**Mirtazapine** $C_{17}H_{19}N_3$

FW: 265.35

[61337-67-5]

 $\geq 98\%$ **10 mg****50 mg****250 mg**

5-HT₁ receptor agonist, 5-HT_{2/3} and α ₂-adrenergic receptor antagonist, and histamine H₁ receptor inverse agonist used to treat depression and anxiety. It also acts as a sedative, prevents relapse in recently abstinent substance abuse subjects, and decreases behavioral complications associated with autism spectrum disorder.

Kongsakon R, Papadopoulos KI, Saguansiritham R. Mirtazapine in amphetamine detoxification: a placebo-controlled pilot study. *Int Clin Psychopharmacol*. 2005 Sep;20(5):253-6. PMID: 16096515.

Liappas J, Paparrigopoulos T, Malitas P, et al. Mirtazapine improves alcohol detoxification. *J Psychopharmacol*. 2004 Mar;18(1):88-93. PMID: 15107190.

Nutt DJ. Tolerability and safety aspects of mirtazapine. *Hum Psychopharmacol*. 2002 Jun;17 Suppl 1:S37-41. PMID: 12404669.

M3476**Mithramycin**

Plicamycin

 $C_{52}H_{76}O_{25}$

FW: 1084.47

[18378-89-7]

 $\geq 95\%$ **1 mg****5 mg****10 mg**

Inhibitor of DNMT1 and RNA synthesis. It induces apoptosis in prostate cancer cells and prevents increases in H3 histone methylation in Huntington's disease models.

Choi ES, Chung T, Kim JS, et al. Mithramycin A induces apoptosis by regulating the mTOR/Mcl-1/Bid pathway in androgen-independent prostate cancer cells. *J Clin Biochem Nutr*. 2013 Sep;53(2):89-93. PMID: 24062605.

Choi ES, Jung JY, Lee JS, et al. Myeloid cell leukemia-1 is a key molecular target for mithramycin A-induced apoptosis in androgen-independent prostate cancer cells and a tumor xenograft animal model. *Cancer Lett*. 2013 Jan 1;328(1):65-72. PMID: 23000424.

Lin RK, Hsu CH, Wang YC. Mithramycin A inhibits DNA methyltransferase and metastasis potential of lung cancer cells. *Anticancer Drugs*. 2007 Nov;18(10):1157-64. PMID: 17893516.

M3577**Mitiglinide Calcium** $2(C_{19}H_{24}NO_3)Ca$

FW: 668.88

[145375-43-5]

 $\geq 98\%$ **100 mg****250 mg****1 g**

ATP-sensitive K⁺ channel blocker and potential ryanodine receptor agonist. It increases insulin secretion and decreases plasma glucose in pancreatic β cells and lowers levels of FGF-21, altering glucose metabolism.

Phillippe HM, Wargo KA. Mitiglinide for type 2 diabetes treatment. *Expert Opin Pharmacother*. 2013 Oct;14(15):2133-44. PMID: 23992284.

Wang B, Yang G, Yang M, et al. Mitiglinide treatment may decrease plasma fibroblast growth factor-21 levels in individuals with new-onset T2DM. *Cytokine*. 2012 Feb;57(2):300-3. PMID: 22129626.

Phillippe HM, Wargo KA. Mitiglinide: a novel agent for the treatment of type 2 diabetes mellitus. *Ann Pharmacother*. 2010 Oct;44(10):1615-23. PMID: 20841518.

M3377**Mitomycin C**

MMC

 $C_{15}H_{18}N_4O_5$

FW: 334.33

[50-07-7]

 $\geq 98\%$ **1 mg****5 mg****10 mg****25 mg**

DNA cross-linker and thioredoxin reductase inhibitor used to treat various cancers. It also improves allograft transplant survival by decreasing CD4⁺ T cell activation and increasing Treg levels.

Liu L, Wang F, Zheng Y, et al. Pretreatment of transfused donor splenocytes and allografts with mitomycin C attenuates acute rejection in heart transplantation in mice. *Transplant Proc*. 2014 May;46(4):1169-74. PMID: 24815153.

Paz MM, Zhang X, Lu J, et al. A new mechanism of action for the anticancer drug mitomycin C: mechanism-based inhibition of thioredoxin reductase. *Chem Res Toxicol*. 2012 Jul 16;25(7):1502-11. PMID: 22694104.

Kang YH, Lee KA, Kim JH, et al. Mitomycin C modulates DNA-double strand break repair genes in cervical carcinoma cells. *Amino Acids*. 2010 Nov;39(5):1291-8. PMID: 20352460.

M4200 	MK-0752 NEW $C_{21}H_{21}ClF_2O_4S$ FW: 442.9 [471905-41-6] $\geq 98\%$ Inhibitor of γ-secretase and Notch signaling. It decreases the formation of amyloid-β plaques and may suppress growth of brain tumors. Hoffman LM, Fouladi M, Olson J, et al. Phase I trial of weekly MK-0752 in children with refractory central nervous system malignancies: a pediatric brain tumor consortium study. <i>Childs Nerv Syst</i> . 2015 Aug;31(8):1283-9. PMID: 25930724. Olson RE, Albright CF. Recent progress in the medicinal chemistry of gamma-secretase inhibitors. <i>Curr Top Med Chem</i> . 2008;8(1):17-33. PMID: 18220929.
M4102 	MK-1775 NEW $C_{27}H_{32}N_8O_2$ FW: 500.6 [955365-80-7] $\geq 98\%$ Wee1 inhibitor that regulates the G2 mitosis checkpoint in response to DNA damage. It induces double-stranded DNA breaks in acute myelogenous leukemia cells and improves survival rates in other cancer models. Qi W, Xie C, Li C, et al. CHK1 plays a critical role in the anti-leukemic activity of the wee1 inhibitor MK-1775 in acute myeloid leukemia cells. <i>J Hematol Oncol</i> . 2014 Aug 1;7:53. PMID: 25084614. Van Linden AA, Baturin D, Ford JB, et al. Inhibition of Wee1 sensitizes cancer cells to antimetabolite chemotherapeutics in vitro and in vivo, independent of p53 functionality. <i>Mol Cancer Ther</i> . 2013 Dec;12(12):2675-84. PMID: 24121103.
M4004 	MK-2461 NEW $C_{24}H_{25}N_5S$ FW: 495.55 [917879-39-1] $\geq 98\%$ Inhibitor of MET, FGFR, and PDGFR. It decreases tumor growth and size in models of glioblastoma and gastric cancer. Katz JD, Jewell JP, Guerin DJ, et al. Discovery of a 5H-benzol[4,5]cyclohepta[1,2-b]pyridin-5-one (MK-2461) inhibitor of c-Met kinase for the treatment of cancer. <i>J Med Chem</i> . 2011 Jun 23;54(12):4092-108. PMID: 21608528. Pan BS, Chan GK, Chenard M, et al. MK-2461, a novel multitargeted kinase inhibitor, preferentially inhibits the activated c-Met receptor. <i>Cancer Res</i> . 2010 Feb 15;70(4):1524-33. PMID: 20145145.
M4000 	MK-2206 $C_{25}H_{22}ClN_5O$ FW: 443.93 [1032349-77-1] $\geq 99\%$ Akt inhibitor. It induces cell cycle arrest in hepatocellular carcinoma cells and inhibits proliferation of non-small cell lung cancer cells and thyroid cancer cells. Zhao YY, Tian Y, Zhang J, et al. Effects of an oral allosteric AKT inhibitor (MK-2206) on human nasopharyngeal cancer in vitro and in vivo. <i>Drug Des Devel Ther</i> . 2014 Oct 10;8:1827-37. PMID: 25336925. Burke JF, Schlosser L, Harrison AD, et al. MK-2206 Causes Growth Suppression and Reduces Neuroendocrine Tumor Marker Production in Medullary Thyroid Cancer Through Akt Inhibition. <i>Ann Surg Oncol</i> . 2013 Nov;20(12):3862-8. PMID: 23900743. Jiao P, Zhou YS, Yang JX, et al. MK-2206 induces cell cycle arrest and apoptosis in HepG2 cells and sensitizes TRAIL-mediated cell death. <i>Mol Cell Biochem</i> . 2013 Jun 25. [Epub ahead of print] PMID: 23797319.
M4455 	MLN-2238 NEW $C_{14}H_{19}BrCl_2N_2O_4$ FW: 361.03 [1072833-77-2] $\geq 99\%$ Proteasome inhibitor and miR33b modulator. It downregulates Pim-1 activity in multiple myeloma cells. Tian Z, Zhao JJ, Tai YT, et al. Investigational agent MLN9708/2238 targets tumor-suppressor miR33b in MM cells. <i>Blood</i> . 2012 Nov 8;120(19):3958-67. PMID: 22983447.

M4454 	MLN-4924 Pevonedistat $C_{21}H_{25}N_5O_4S$ FW: 443.16 [905579-51-3] $\geq 99\%$ Nedd8-activating enzyme inhibitor that blocks proteasomal cullin protein neddylation by Cullin-RING E3 ubiquitin ligases. It induces cell cycle arrest, senescence, autophagy, and apoptosis in various cell lines. It also decreases release of pro-inflammatory cytokines and stimulates accumulation of HIF-1. Yan ZH, Burkhardt A, Loke HK, et al. Quantifiable analysis of cellular pathway inhibition of a Nedd8-activating enzyme inhibitor, MLN4924, using AlphaScreen. <i>Anal Biochem.</i> 2013 Aug 15;439(2):109-15. PMID: 23624319. Li L, Liu B, Dong T, et al. Neddylation pathway regulates the proliferation and survival of macrophages. <i>Biochem Biophys Res Commun.</i> 2013 Mar 15;432(3):494-8. PMID: 23416079. Zhao Y, Xiong X, Jia L, et al. Targeting Cullin-RING ligases by MLN4924 induces autophagy via modulating the HIF1-REDD1-TSC1-mTORC1-DEPTOR axis. <i>Cell Death Dis.</i> 2012 Sep 6;3:e386. PMID: 22951983.	1 mg 5 mg 25 mg
M4452 	MLN2480 $C_{17}H_{12}Cl_2F_2N_7O_2S$ FW: 506.3 [1096708-71-2] $\geq 98\%$ Raf inhibitor that suppresses proliferation of cancer cells. http://clinicaltrials.gov/show/NCT01425008	1 mg 5 mg
M4652 	MLN8237 NEW Alisertib $C_{27}H_{20}ClF_4N_4O_4$ FW: 518.92 [1028486-01-2] $\geq 98\%$ Aurora kinase A inhibitor. It prevents mitotic spindle formation, inhibits VEGF secretion, and induces cell cycle arrest, aneuploidy, and apoptosis in bladder cancer cells. Romain C, Paul P, Kim KW, et al. Targeting Aurora kinase-A downregulates cell proliferation and angiogenesis in neuroblastoma. <i>J Pediatr Surg.</i> 2014 Jan;49(1):159-65. PMID: 24439602. Kelly KR, Shea TC, Goy A, et al. Phase I study of MLN8237-investigational Aurora A kinase inhibitor-in relapsed/refractory multiple myeloma, Non-Hodgkin lymphoma and chronic lymphocytic leukemia. <i>Invest New Drugs.</i> 2013 Dec 20. [Epub ahead of print]. PMID: 24352795. Zhou N, Singh K, Mir MC, et al. The investigational Aurora kinase A inhibitor MLN8237 induces defects in cell viability and cell-cycle progression in malignant bladder cancer cells in vitro and in vivo. <i>Clin Cancer Res.</i> 2013 Apr 1;19(7):1717-28. PMID: 23403633.	1 mg 5 mg 10 mg
M5610 	Moclobemide NEW $C_{13}H_{17}ClN_2O_2$ FW: 268.74 [71320-77-9] $\geq 98\%$ MAO-A inhibitor used to treat depression and anxiety. It also suppresses LPS-induced increases in IL-1 β and TNF- α expression in glial cells, increases latency time in animal models of thermal pain, and induces hippocampal neurogenesis. Bielecka AM, Paul-Samojedny M, Obuchowicz E. Moclobemide exerts anti-inflammatory effect in lipopolysaccharide-activated primary mixed glial cell culture. <i>Naunyn Schmiedebergs Arch Pharmacol.</i> 2010 Dec;382(5-6):409-17. PMID: 20811738. Li YF, Zhang YZ, Liu YQ, et al. Moclobemide up-regulates proliferation of hippocampal progenitor cells in chronically stressed mice. <i>Acta Pharmacol Sin.</i> 2004 Nov;25(11):1408-12. PMID: 15525460. Schreiber S, Getslev V, Weizman A, et al. The antinociceptive effect of moclobemide in mice is mediated by noradrenergic pathways. <i>Neurosci Lett.</i> 1998 Sep 11;253(3):183-6. PMID: 9792241.	10 mg 25 mg 100 mg
M5727 	Moguisteine $C_{16}H_{21}NO_3S$ FW: 339.41 [119637-67-1] $\geq 98\%$ Potential ATP-sensitive K ⁺ channel blocker and irritant receptor antagonist used to prevent chronic cough. Luo YL, Li PB, Zhang CC, et al. Effects of four antitussives on airway neurogenic inflammation in a guinea pig model of chronic cough induced by cigarette smoke exposure. <i>Inflamm Res.</i> 2013 Dec;62(12):1053-61. PMID: 24085318. Morita K, Onodera K, Kamei J. Inhaled pinacidil, an ATP-sensitive K ⁺ channel opener, and moguisteine have potent antitussive effects in guinea pigs. <i>Jpn J Pharmacol.</i> 2002 Jun;89(2):171-5. Inhibitor of 5-lipoxygenase, AChR, BChE, and mTORC1 found in creosote bush. It displays many biological activities, including preventing viral assembly in dengue virus samples, increasing life span, suppressing angiogenesis, invasion, and proliferation of glioma cells, and inhibiting osteoclastogenesis and bone destruction.

P2859 H-Arg-Arg-Lys-Ala-Ser-Gly-Pro-Pro-Val-OH	Phosphate Acceptor Peptide $C_{41}H_{74}N_{10}O_{11}$ FW: 967.15 $\geq 95\%$ Substrate used to measure activity of PKC and S6 kinase. O'Brian CA, Ward NE. Stimulation of the ATPase activity of rat brain protein kinase C by phospho acceptor substrates of the enzyme. <i>Biochemistry.</i> 1991 Mar 5;30(9):2549-54. PMID: 1848101.	1 mg 2 mg 5 mg
P3076 	PHT-427 NEW $C_{20}H_{31}N_3O_2S_2$ FW: 409.61 [1191951-57-1] $\geq 98\%$ PDK1 and Akt inhibitor. It inhibits tumor growth in non-small cell lung cancer models. Meunillet EJ, Zuohe S, Lemos R, et al. Molecular pharmacology and antitumor activity of PHT-427, a novel Akt/phosphatidylinositol-dependent protein kinase 1 pleckstrin homology domain inhibitor. <i>Mol Cancer Ther.</i> 2010 Mar;9(3):706-17. PMID: 20197390.	5 mg 10 mg
P2992 pGlu-Leu-Trp-Ala-Val-Gly-Ser-Phe-Met-NH ₂	Phyllolitorin $C_{49}H_{69}N_{11}O_{11}S_1$ FW: 1020.24 [87734-77-8] $\geq 95\%$ GRP (BB1) receptor and neuromedin B (BB2) receptor agonist found in amphibian skin. It elicits grooming and scratching behavior, induces contractions in urinary bladder smooth muscle, and may play a role in lung branching morphogenesis. Lin JT, Coy DH, Mantey SA, et al. Comparison of the peptide structural requirements for high affinity interaction with bombesin receptors. <i>Eur J Pharmacol.</i> 1995 Dec 27;294(1):55-69. PMID: 8788416.	0.5 mg 1 mg 2.5 mg
P2993 pGlu-Asn-Pro-Asn-Arg-Phe-Ile-Gly-Leu-Met-NH ₂	Phyllomedusin $C_{52}H_{82}N_{16}O_{13}S$ FW: 1171.41 [26145-48-2] $\geq 95\%$ Amphibian NK1 receptor agonist. It induces contractions in ileal longitudinal muscle and stimulates spasmogenic activity in stomach smooth muscle. Ganjiwale AD, Cowsik SM. Three-dimensional structure of Phyllomedusin, a NK1 receptor agonist bound to dodecylphosphocholine micelles. <i>J Struct Biol.</i> 2009 Aug;167(2):176-84. PMID: 19409496.	1 mg 2 mg 5 mg

P2994 pGlu-Ala-Asp-Pro-Asn-Lys-Phe-Tyr-Gly-Leu-Met-NH₂	Physalaemin C₅₈H₈₄N₁₄O₁₆S₁ FW: 1265.48 [2507-24-6] ≥95% Amphibian tachykinin that induces contractions in distal colon and esophageal longitudinal muscle. Shiina T, Shima T, Hirayama H, et al. Contractile responses induced by physalaemin, an analogue of substance P, in the rat esophagus. <i>Eur J Pharmacol.</i> 2010 Feb 25;628(1-3):202-6. PMID: 19958761. Fontaine J, Lebrun P. Contractile effects of substance P and other tachykinins on the mouse isolated distal colon. <i>Br J Pharmacol.</i> 1989 Mar;96(3):583-90. PMID: 2470454.	1 mg 2 mg 5 mg
P2995 	Physcion Parietin; Rheochrysidin C₁₆H₁₂O₃ FW: 284.26 [521-61-9] ≥96% Found in various plant sources. It induces apoptosis in cervical carcinoma cells, decreases edema, and inhibits growth of <i>Staphylococcus</i>, <i>Pseudomonas</i>, <i>Escherichia</i>, <i>Candida</i>, and <i>Aspergillus</i>. Wijesekara I, Zhang C, Van Ta Q, et al. Physcion from marine-derived fungus <i>Microsporium</i> sp. induces apoptosis in human cervical carcinoma HeLa cells. <i>Microbiol Res.</i> 2014 Apr;169(4):255-61. PMID: 24071573. Locatelli M, Epifano F, Genovese S, et al. Anthraquinone profile, antioxidant and antimicrobial properties of bark extracts of <i>Rhamnus catharticus</i> and <i>R. orbiculatus</i>. <i>Nat Prod Commun.</i> 2011 Sep;6(9):1275-80. PMID: 21941897. Ghosh S, Das Sarma M, Patra A, et al. Anti-inflammatory and anticancer compounds isolated from <i>Ventilago madraspatana</i> Gaertn., <i>Rubia cordifolia</i> Linn. and <i>Lantana camara</i> Linn. <i>J Pharm Pharmacol.</i> 2010 Sep;62(9):1158-66. PMID: 20796195.	10 mg 25 mg 100 mg
P3198 	Phytanic Acid C₂₀H₄₀O₂ FW: 312.53 [14721-66-5] ≥97% Fatty acid metabolite of chlorophyll, RXR and PPAR agonist, and potential GPR40 agonist. It regulates glucose metabolism, induces apoptosis in astrocytes, and alters intracellular Ca²⁺ levels. Che BN, Oksbjerg N, Hellgren LI, et al. Phytanic acid stimulates glucose uptake in a model of skeletal muscles, the primary porcine myotubes. <i>Lipids Health Dis.</i> 2013 Feb 11;12:14. PMID: 23398851. Busanello EN, Amaral AU, Tonin AM, et al. Disruption of mitochondrial homeostasis by phytanic acid in cerebellum of young rats. <i>Cerebellum.</i> 2013 Jun;12(3):362-9. PMID: 23081695. Kruska N, Reiser G. Phytanic acid and pristanic acid, branched-chain fatty acids associated with Refsum disease and other inherited peroxisomal disorders, mediate intracellular Ca²⁺ signaling through activation of free fatty acid receptor GPR40. <i>Neurobiol Dis.</i> 2011 Aug;43(2):465-72. PMID: 21570468.	NEW 5 mg 25 mg
P2997 	Phytic Acid, 40-50 wt% aqueous solution Inositol hexaphosphate C₆H₁₈O₂₄P₆ FW: 660.04 [83-86-3] ≥40% It is used to store phosphorus in plants and is occasionally used in cattle feed. It induces apoptosis in adenocarcinoma cells, decreases edema, and protects against NSAID-induced ulcer formation. Shafie NH, Esa NM, Ithnin H, et al. Pro-apoptotic effect of rice bran inositol hexaphosphate (IP6) on HT-29 colorectal cancer cells. <i>Int J Mol Sci.</i> 2013 Dec 2;14(12):23545-58. PMID: 24317430. Lopez-Gonzalez AA, Grases F, Perello J, et al. Phytate levels and bone parameters: a retrospective pilot clinical trial. <i>Front Biosci (Elite Ed).</i> 2010 Jun 1;2:1093-8. PMID: 20515779. Sudheer Kumar M, Sridhar Reddy B, Kiran Babu S, et al. Antiinflammatory and antiulcer activities of phytic acid in rats. <i>Indian J Exp Biol.</i> 2004 Feb;42(2):179-85. PMID: 15282951.	100 mL 500 mL
P3209 	Picetannol C₁₄H₁₂O₄ FW: 244.24 [10083-24-6] ≥98% Resveratrol derivative, HPH-2 inhibitor, and potential PI3K and JAK1 inhibitor. It increases levels of HIF-1α, VEGF, and HO-1, suppresses growth of prostate cancer cells, inhibits the insulin receptor, and prevents adipogenesis in preadipocytes. Yum S, Doh HJ, Hong S, et al. Picetannol, a hydroxystilbene natural product, stabilizes HIF-1α protein by inhibiting HIF prolyl hydroxylase. <i>Eur J Pharmacol.</i> 2013 Jan 15;699(1-3):124-31. PMID: 23261967. Jayasooriya RG, Lee YG, Kang CH, et al. Picetannol inhibits MMP-9-dependent invasion of tumor necrosis factor-α-stimulated DU145 cells by suppressing the Akt-mediated nuclear factor-κB pathway. <i>Oncol Lett.</i> 2013 Jan;5(1):341-347. PMID: 23255946. Li Z, Yang X, Dong S, et al. DNA breakage induced by picetannol and copper(II): Mechanism and anticancer properties. <i>Oncol Lett.</i> 2012 May;3(5):1087-1094. PMID: 22783397.	5 mg 25 mg

P3210 	Picoplatin $C_6H_{10}Cl_2N_2Pt$ FW: 376.15 [181630-15-9] $\geq 98\%$ Platinum-based DNA cross-linker used to treat non-small cell lung cancer. It intercalates with GpG DNA sequences. Matos CS, de Carvalho AL, Lopes RP, et al. New strategies against prostate cancer–Pt(II)-based chemotherapy. <i>Curr Med Chem.</i> 2012;19(27):4678-87. PMID: 22856665. Eckardt JR, Bentsion DL, Lipatov ON, et al. Phase II study of picoplatin as second-line therapy for patients with small-cell lung cancer. <i>J Clin Oncol.</i> 2009 Apr 20;27(12):2046-51. PMID: 19289620.
P3313 	Pidotimod $C_9H_{12}N_2O_4S$ FW: 244.27 [121808-62-6] $\geq 98\%$ Immunostimulator and adjuvant used to treat acute respiratory tract infections. It increases levels of Th1 cytokines, decreases parasite burden in Toxoplasma infection models, and promotes dendritic cell maturation. Zuccotti GV, Mamei C. Pidotimod: the past and the present. <i>Ital J Pediatr.</i> 2013 Dec 6;39:75. PMID: 24314100. Zhao Y, Huang B, Huang S, et al. H-Arg-Tyr-Leu-Pro-Thr-OH	$C_{30}H_{48}N_8O_8$ FW: 648.77 [57966-42-4] $\geq 95\%$ Found in crustaceans and insects. It causes vascular resistance, modulates vitellogenin uptake, and increases antennae-heart beat rates. Wilkens J. Possible mechanisms of control of vascular resistance in the lobster <i>Homarus americanus</i> J Exp Biol. 1997;200(Pt 3):487-93. PMID: 9318157.	
P6854	Progesterone	5 g 25 g 100 g
	$C_{21}H_{30}O_2$ FW: 314.47 [57-83-0] $\geq 98\%$ Endogenous steroid hormone involved in reproduction. It activates progesterone receptors and inhibits mineralocorticoid, nAChR, and $\sigma 1/2$ receptors. It is used as HRT and also to prevent preterm birth. It induces myelin sheath formation, supports neurotransmission, and induces mammary gland development. Johannessen M, Fontanilla D, Mavlyutov T, et al. Antagonist action of progesterone at σ -receptors in the modulation of voltage-gated sodium channels. Am J Physiol Cell Physiol. 2011 Feb;300(2):C328-37. Erratum in: Am J Physiol Cell Physiol. 2013 Nov 1;305(9):C997. PMID: 21084640. da Fonseca EB, Bittar RE, Carvalho MH, et al. Prophylactic administration of progesterone by vaginal suppository to reduce the incidence of spontaneous preterm birth in women at increased risk: a randomized placebo-controlled double-blind study. Am J Obstet Gynecol. 2003 Feb;188(2):419-24. PMID: 12592250.	
P6850	Prolactin-Releasing Peptide (1-31), human	1 mg
Ser-Arg-Thr-His-Arg-His-Ser-Met-Glu-Ile-Arg-Thr-Pro-Asp-Ile-Asn-Pro-Ala-Trp-Tyr-Ala-Ser-Arg-Gly-Ile-Arg-Pro-Val-Gly-Arg-Phe-NH ₂	PrRP-31 $C_{160}H_{252}N_{56}O_{42}S$ FW: 3664.2 $\geq 98\%$ Endogenous GPR10 agonist involved in hormone secretion. It stimulates release of LH, FSH, and prolactin, decreases food intake, and increases expression of pro-inflammatory cytokines and ROS in leukocytes. Yamashita M, Takayanagi Y, Yoshida M, et al. Involvement of prolactin-releasing peptide in the activation of oxytocin neurones in response to food intake. J Neuroendocrinol. 2013 May;25(5):455-65. PMID: 23363338.	
P6852	Propafenone Hydrochloride	1 g 5 g
	$C_{21}H_{27}NO_3 \cdot HCl$ FW: 377.91 [34183-22-7] $\geq 98\%$ Inhibitor of β -adrenergic receptors and $K_v 1.4$ and $K2P2 K^+$ channels used to treat arrhythmias. It also propafenone inhibits expression of tyrosinase, TRP-1, and TRP-2 and suppresses melanogenesis. Schmidt C, Wiedmann F, Schweizer PA, et al. Class I antiarrhythmic drugs inhibit human cardiac two-pore-domain K^+ ($K2P2$) channels. Eur J Pharmacol. 2013 Dec 5;721(1-3):237-48. PMID: 24070813. Huh S, Jung E, Lee J, et al. Mechanisms of melanogenesis inhibition by propafenone. Arch Dermatol Res. 2010 Sep;302(7):561-5. PMID: 20549222.	
P6855	(±)-S-Propyl-L-cysteine-S-oxide	10 mg 25 mg
	$C_6H_{13}NO_3S$ FW: 179.24 $\geq 98\%$ Synthetic analog of alliin found in <i>Allium</i> . It may inhibit oil drop formation. Yoshinari O, Shiojima Y, Igarashi K. Anti-obesity effects of onion extract in Zucker diabetic fatty rats. Nutrients. 2012 Oct 22;4(10):1518-26. PMID: 23201769. Krest I, Glodek J, Keusgen M. Cysteine sulfoxides and alliinase activity of some <i>Allium</i> species. J Agric Food Chem. 2000 Aug;48(8):3753-60. PMID: 10956182.	
P6865	Propranolol Hydrochloride	1 g 5 g 25 g 100 g
	$C_{16}H_{21}NO_2 \cdot HCl$ FW: 295.8 [318-98-9] $\geq 98\%$ $\beta 1/2$ -Adrenergic receptor antagonist used to treat hypertension and several other cardiovascular complications. It also attenuates wound healing-induced hypermetabolic responses and suppresses cortical spreading during depression. Ji Y, Li K, Xiao X, et al. Effects of propranolol on the proliferation and apoptosis of hemangioma-derived endothelial cells. J Pediatr Surg. 2012 Dec;47(12):2216-23. PMID: 23217879. Izadpanah A, Izadpanah A, Kanevsky J, et al. Propranolol versus corticosteroids in the treatment of infantile hemangioma: a systematic review and meta-analysis. Plast Reconstr Surg. 2013 Mar;131(3):601-13. PMID: 23142941. Romana-Souza B, Santos JS, Monte-Alto-Costa A. beta-1 and beta-2, but not alpha-1 and alpha-2, adrenoceptor blockade delays rat cutaneous wound healing. Wound Repair Regen. 2009 Mar-Apr;17(2):230-9. PMID: 19320892.	

P6956 	Prostaglandin E1 $C_{20}H_{34}O_5$ FW: 354.48 [745-65-3] $\geq 98\%$ 1 mg 5 mg 10 mg Endogenous prostaglandin and vasodilator used to treat erectile dysfunction. It also decreases small intestine mucosa lesions, improves renal function, and enhances VEGF production in ischemia models. Hanchanale V, Eardley I. Alprostadil for the treatment of impotence. <i>Expert Opin Pharmacother</i>. 2014 Feb;15(3):421-8. PMID: 24369066. Brasileiro JL, Inoye CM, Aydos RD, et al. Ischemia and reperfusion of rat small intestine using pentoxifylline and prostaglandin E1. <i>Acta Cir Bras</i>. 2013 Nov;28(11):767-73. PMID: 24316743. Liu WJ, Zhang BC, Guo R, et al. Renoprotective effect of alprostadil in combination with statins in patients with mild to moderate renal failure undergoing coronary angiography. <i>Chin Med J (Engl)</i>. 2013;126(18):3475-80. PMID: 24034093.
P4560 His-Ser-Leu-Gly-Lys-Trp-Leu-Gly-His-Pro-Asp-Lys-Phe	Proteolipid Protein (139-151) PLP $C_{72}H_{104}N_{20}O_{17}$ FW: 1521.7 $\geq 95\%$ 1 mg 5 mg Immunodominant peptide fragment of proteolipid protein used to induce EAE. Soellner IA, Rabe J, Mauri V, et al. Differential aspects of immune cell infiltration and neurodegeneration in acute and relapse experimental autoimmune encephalomyelitis. <i>Clin Immunol</i>. 2013 Dec;149(3):519-29. PMID: 24239839. Nicolò C, Salì M, Di Sante G, et al. <i>Mycobacterium</i> smegmatis expressing a chimeric protein MPT64-proteolipid protein (PLP) 139-151 reorganizes the PLP-specific T cell repertoire favoring a CD8-mediated response and induces a relapsing experimental autoimmune encephalomyelitis. <i>J Immunol</i>. 2010 Jan 1;184(1):222-35. PMID: 19949067.
P6959 	Prothionamide $C_9H_{12}N_2S$ FW: 180.27 [14222-60-7] $\geq 98\%$ 1 g 5 g 25 g Nicotinic acid derivative and InhA inhibitor used to treat <i>Mycobacterium</i>-based diseases. It forms adducts with NAD and prevents synthesis of mycolic acids. Shim TS, Jo KW. Medical Treatment of Pulmonary Multidrug-Resistant Tuberculosis. <i>Infect Chemother</i>. 2013 Dec;45(4):367-374. PMID: 24475350. Wang F, Langley R, Gullen G, et al. Mechanism of thioamide drug action against tuberculosis and leprosy. <i>J Exp Med</i>. 2007 Jan 22;204(1):73-8. PMID: 17227913.
P6857 	Protocatechuic Acid 3,4-Dihydroxybenzoic acid $C_7H_6O_4$ FW: 154.12 [99-50-3] $\geq 97\%$ 25 g 50 g 100 g Topoisomerase II inhibitor found in many plants and foods. It targets PKC/RhoB activation to suppress migration and invasion of melanoma cells, induces apoptosis in gastric adenocarcinoma cells, and prevents oxidative stress-induced apoptosis in PC12 neurons. Kuriyama I, Nakajima Y, Nishida H, et al. Inhibitory effects of low molecular weight polyphenolics from Inonotus obliquus on human DNA topoisomerase activity and cancer cell proliferation. <i>Mol Med Rep</i>. 2013 Aug;8(2):535-42. PMID: 23799608. On CB, Pan Q, Chen X, et al. Protocatechuic acid, a new active substance against the challenge of avian infectious bursal disease virus. <i>Poult Sci</i>. 2012 Jul;91(7):1604-9. Erratum in: <i>Poult Sci</i>. 2012 Oct;91(10):2722. Pang, Q [corrected to Pan, Q]. PMID: 22700505.
P7060 	Protocatechuic Acid Ethyl Ester $C_9H_{10}O_4$ FW: 182.17 [3943-89-3] $\geq 98\%$ 5 g 25 g 100 g Topoisomerase II inhibitor found in many plants and foods. It prevents PKC/RhoB activation, inhibits TNF-induced expression of pro-inflammatory cytokines, improves pathology and motor function in models of bilateral common carotid artery occlusion, and suppresses metastasis, invasion, and proliferation of cancer cells. Stumpf C, Fan Q, Hintermann C, et al. Anti-inflammatory effects of danshen on human vascular endothelial cells in culture. <i>Am J Chin Med</i>. 2013;41(5):1065-77. PMID: 24117069. Garcia-Alvarez MC, Moussa I, Njomnang Soh P, et al. Both plants <i>Sebastiania chamaelea</i> from Niger and <i>Chrozophora senegalensis</i> from Senegal used in African traditional medicine in malaria treatment share a same active principle. <i>J Ethnopharmacol</i>. 2013 Oct 7;149(3):676-84. PMID: 23906782. Kuriyama I, Nakajima Y, Nishida H, et al. Inhibitory effects of low molecular weight polyphenolics from Inonotus obliquus on human DNA topoisomerase activity and cancer cell proliferation. <i>Mol Med Rep</i>. 2013 Aug;8(2):535-42. PMID: 23799608.

P7058 	Protocatechuic Aldehyde $C_7H_6O_3$ FW: 138.12 [139-85-5] $\geq 98\%$ 10 g 25 g 100 g Found in various plants and foods. It decreases infarct size in models of ischemia/reperfusion, decreases levels of collagen, TGF-β, and CTGF in liver fibrosis models, and suppresses apoptosis in endothelial cells. Wei G, Guan Y, Yin Y, et al. Anti-inflammatory effect of protocatechuic aldehyde on myocardial ischemia/reperfusion injury in vivo and in vitro. <i>Inflammation</i>. 2013 Jun;36(3):592-602. PMID: 23269534. Xing YL, Zhou Z, Agula, et al. Protocatechuic aldehyde inhibits lipopolysaccharide-induced human umbilical vein endothelial cell apoptosis via regulation of caspase-3. <i>Phytother Res</i>. 2012 Sep;26(9):1334-41. PMID: 22298410. Xu Y, Jiang WL, Zhang SP, et al. Protocatechuic aldehyde protects against experimental sepsis in vitro and in vivo. <i>Basic Clin Pharmacol Toxicol</i>. 2012 Apr;110(4):384-9. PMID: 22050905.
P7057 	Protodioscin $C_{50}H_{82}O_{22}$ FW: 1049.19 [55056-80-9] $\geq 98\%$ 5 mg 25 mg Na⁺/K⁺ ATPase and Ca²⁺/Mg²⁺ ATPase activator found in <i>Dioscorea</i>. It protects cardiomyocytes under anoxic conditions, decreases levels of triglycerides, LDL, and total cholesterol, and induces cell cycle arrest and apoptosis in cancer cells. Wang T, Choi RC, Li J, et al. Antihyperlipidemic effect of protodioscin, an active ingredient isolated from the rhizomes of <i>Dioscorea nipponica</i>. <i>Planta Med</i>. 2010 Oct;76(15):1642-6. PMID: 20509104. Ning Z, Li YK, Zhou Y. Effect and mechanism of methyl protodioscin in protecting cardiomyocytes against anoxia/reoxygenation injury. <i>Zhongguo Zhong Xi Yi Jie He Za Zhi</i>. 2010 Apr;30(4):407-9. PMID: 20669680.
P6957 	Protopanaxadiol $C_{30}H_{52}O_3$ FW: 460.73 [7755-01-3] $\geq 98\%$ 5 mg 10 mg 25 mg GABA-A receptor antagonist found in species of <i>Panax</i>. It prevents breakdown of vitamin D3, inhibits proliferation of colorectal cancer cells, and increases activity of superoxide dismutase and Na⁺/K⁺ ATPases in cerebral ischemia models. Deb S, Chin MY, Adomat H, et al. Ginsenoside-mediated blockade of 1α,25-dihydroxyvitamin D3 inactivation in human liver and intestine in vitro. <i>J Steroid Biochem Mol Biol</i>. 2014 May;141:94-103. PMID: 24486455. Xu H, Yu X, Qu S, et al. Protective effect of <i>Panax quinquefolium</i> 20(S)-protopanaxadiol saponins, isolated from <i>Pana quinquefolium</i>, on permanent focal cerebral ischemic injury in rats. <i>Exp Ther Med</i>. 2014 Jan;7(1):165-170. PMID: 24348784. Zheng Y, Nan H, Hao M, et al. Antiproliferative effects of protopanaxadiol ginsenosides on human colorectal cancer cells. <i>Biomed Rep</i>. 2013 Jul;1(4):555-558. PMID: 24648985.
P6958 	Protopanaxatriol $C_{30}H_{52}O_4$ FW: 476.73 [34080-08-5] $\geq 95\%$ 5 mg 10 mg 25 mg GABA-A/C receptor antagonist and slow-activating delayed rectifier K⁺ channel blocker found in species of <i>Panax</i>. It displays several biological activities, including inhibiting breakdown of vitamin D3, increasing vascular relaxation, decreasing blood pressure, and increasing activity of antioxidative enzymes. Deb S, Chin MY, Adomat H, et al. Ginsenoside-mediated blockade of 1α,25-dihydroxyvitamin D3 inactivation in human liver and intestine in vitro. <i>J Steroid Biochem Mol Biol</i>. 2014 May;141:94-103. PMID: 24486455. Lee BH, Hwang SH, Choi SH, et al. Inhibitory Effects of Ginsenoside Metabolites, Compound K and Protopanaxatriol, on GABAC Receptor-Mediated Ion Currents. <i>Korean J Physiol Pharmacol</i>. 2013 Apr;17(2):127-132. PMID: 23626474. Hong SY, Kim JY, Ahn HY, et al. <i>Panax</i> ginseng extract rich in ginsenoside protopanaxatriol attenuates blood pressure elevation in spontaneously hypertensive rats by affecting the Akt-dependent phosphorylation of endothelial nitric oxide synthase. <i>J Agric Food Chem</i>. 2012 Mar 28;60(12):3086-91. PMID: 22380784.
P7158 	Protopine NEW $C_{20}H_{19}NO_5$ FW: 353.37 [130-86-9] $\geq 98\%$ 1 mg 5 mg Voltage- and receptor-gated Ca²⁺ channel blocker found in a variety of plant sources. It decreases pain transmission, decreases LPS-stimulated expression of pro-inflammatory cytokines, potentially inhibits microtubule depolymerization, and induces apoptosis in prostate cancer cells. Bae DS, Kim YH, Pan CH, et al. Protopine reduces the inflammatory activity of lipopolysaccharide-stimulated murine macrophages. <i>BMB Rep</i>. 2012 Feb;45(2):108-13. PMID: 22360889. Chen CH, Liao CH, Chang YL, et al. Protopine, a novel microtubule-stabilizing agent, causes mitotic arrest and apoptotic cell death in human hormone-refractory prostate cancer cell lines. <i>Cancer Lett</i>. 2012 Feb 1;315(1):1-11. PMID: 22033245.

P7059 	Proxymetacaine Hydrochloride $C_{16}H_{26}N_2O_3 \cdot HCl$ FW: 330.85 [5875-06-9] $\geq 98\%$ Potential voltage-gated Na^+ channel blocker used for ocular anesthesia or analgesia. Murphy PJ, Ntola AM. Prolonged corneal anaesthesia by proxymetacaine hydrochloride detected by a thermal cooling stimulus. <i>Cont Lens Anterior Eye</i> . 2009 Apr;32(2):84-7; quiz 99-100. PMID: 19181566. Jauregui MJ, Sanders TJ, Polse KA. Anesthetic effects from low concentrations of proparacaine and benoxinate. <i>J Am Optom Assoc</i> . 1980 Jan;51(1):37-41. SIRT1 activator and MAO inhibitor found in several plant sources such as soy, grapes, and peanuts. It degrades amyloid- β plaques and increases brain cysteine levels, inhibits UV-induced skin carcinogenesis, and inhibits growth of cancer cells. It may also activate AMPK, activate proteasomes, and increase life span.

PMID: 18455128.
T1654 	Tenoxicam $C_{13}H_{11}N_3O_4S_2$ FW: 337.38 [59804-37-4] $\geq 98\%$ NSAID and COX-1/2 inhibitor used to treat arthritis, tendonitis, and bursitis. It also inhibits MPP+-induced decreases in phosphorylated Akt and scavenges free radicals, preventing lipid peroxidation. Tasaki Y, Yamamoto J, Omura T, et al. Oxicam structure in non-steroidal anti-inflammatory drugs is essential to exhibit Akt-mediated neuroprotection against 1-methyl-4-phenyl pyridinium-induced cytotoxicity. <i>Eur J Pharmacol</i> . 2012 Feb 15;676(1-3):57-63. PMID: 22182582. Suleyman H, Halici Z, Cadirci E, et al. Indirect role of beta2-adrenergic receptors in the mechanism of anti-inflammatory action of NSAIDs. <i>J Physiol Pharmacol</i> . 2008 Dec;59(4):661-72. PMID: 19212002.
T1855 	Tentoxin $C_{22}H_{30}N_4O_4$ FW: 414.5 [28540-82-1] $\geq 98\%$ CF1 ATPase inhibitor frond in <i>Alternaria</i> . It inhibits the development of chloroplasts. Duke SO, Dayan FE. Modes of action of microbially-produced phytotoxins. <i>Toxins (Basel)</i> . 2011 Aug;3(8):1038-64. Erratum in: <i>Toxins (Basel)</i> . 2012;4(10):955. PMID: 22069756. Reimer S, Selman BR. Tentoxin-induced energy-independent adenine nucleotide exchange and ATPase activity with chloroplast coupling factor 1. <i>J Biol Chem</i> . 1978 Oct 25;253(20):7249-55. PMID: 151681. Selman BR, Durbin RD. Evidence for a catalytic function of the coupling factor 1 protein reconstituted with chloroplast thylakoid membranes. <i>Biochim Biophys Acta</i> . 1978 Apr 11;502(1):29-37. PMID: 147703.

T1952	Tenuazonic Acid	1 mg 5 mg
	$C_{10}H_{15}NO_3$ FW: 197.23 [610-88-8] $\geq 96\%$ Photosynthesis inhibitor found in <i>Alternaria</i> . It increases generation of ROS, resulting in cell destruction and leaf necrosis. Schwarz C, Kreutzer M, Marko D. Minor contribution of alternariol monomethyl ether and tenuazonic acid to the genotoxic properties of extracts from <i>Alternaria alternata</i> infested rice. Toxicol Lett. 2012 Oct 2;214(1):46-52. PMID: 22906495. Chen S, Yin C, Qiang S, et al. Chloroplastic oxidative burst induced by tenuazonic acid, a natural photosynthesis inhibitor, triggers cell necrosis in Eupatorium adenophorum Spreng. Biochim Biophys Acta. 2010 Mar;1797(3):391-405. PMID: 20026008.	
T1670	Terazosin Hydrochloride Dihydrate	50 mg 250 mg 1 g
	$C_{19}H_{25}N_3O_4 \cdot HCl \cdot 2H_2O$ FW: 459.93 [70024-40-7] $\geq 98\%$ $\alpha 1$ -Adrenergic antagonist used to treat BPH and hypertension. It also induces apoptosis in prostate and prostate cancer cells. Oelke M, Gericke A, Michel MC. Cardiovascular and ocular safety of $\alpha 1$ -adrenoceptor antagonists in the treatment of male lower urinary tract symptoms. Expert Opin Drug Saf. 2014 Sep;13(9):1187-97. PMID: 25073735. Papadopoulos G, Vlachodimitropoulos D, Kyroudi A, et al. Terazosin treatment induces caspase-3 expression in the rat ventral prostate. J Clin Med Res. 2013 Apr;5(2):127-31. PMID: 23518907.	
T1672	Terbinafine Hydrochloride	250 mg 1 g 5 g 10 g
	$C_{21}H_{25}N \cdot HCl$ FW: 327.9 [78628-80-5] $\geq 98\%$ Squalene oxidase and KSR1 inhibitor that prevents ergosterol and cholesterol synthesis. It also inhibits proliferation of oral squamous cell carcinoma cells. Li B, Lu L, Zhong M, et al. Terbinafine inhibits KSR1 and suppresses Raf-MEK-ERK signaling in oral squamous cell carcinoma cells. Neoplasia. 2013;60(4):406-12. PMID: 23581412. Nowosielski M, Hoffmann M, Wyrwicz LS, et al. Detailed mechanism of squalene epoxidase inhibition by terbinafine. J Chem Inf Model. 2011 Feb 28;51(2):455-62. PMID: 21229992. Revankar SG, Nailor MD, Sobel JD. Use of terbinafine in rare and refractory mycoses. Future Microbiol. 2008 Feb;3(1):9-17. PMID: 18230029.	
T1674	Terbutaline	1 g 5 g
	$C_{12}H_{19}NO_3$ FW: 225.28 [23031-25-6] $\geq 98\%$ $\beta 2$ -Adrenergic receptor agonist and potential ENaC channel activator used to treat asthma and cough. It inhibits the production of TNF- α , decreases expression of corticotropin-releasing hormone in trophoblasts, and decreases symptoms of allodynia. Bohren Y, Tessier LH, Megat S, et al. Antidepressants suppress neuropathic pain by a peripheral $\beta 2$ -adrenoceptor mediated anti-TNF α mechanism. Neurobiol Dis. 2013 Dec;60:39-50. PMID: 23978467. Freund-Michel VC, Birrell MA, Gienbycz MA, et al. Beta(2)-agonists block tussive responses in guinea pigs via an atypical cAMP-dependent pathway. Eur Respir J. 2010 Mar;35(3):647-54. PMID: 19679606.	
T1675	Teriparatide Acetate	0.5 mg 1 mg
Ser-Val-Ser-Glu-Ile-Gln-Leu-Met-His-Asn-Leu-Gly-Lys-His-Leu-Asn-Ser-Met-Glu-Arg-Val-Glu-Trp-Leu-Arg-Lys-Lys-Leu-Gln-Asp-Val-His-Asn-Phe-OH	$C_{181}H_{291}N_{55}O_{51}S_2$ FW: 4117.72 [52232-67-4] $\geq 95\%$ Synthetic PTH analog and PTH1 receptor agonist used to treat osteoporosis. It stimulates bone formation and increases bone strength. Tseng YY, Su CH, Lui TN, et al. Prospective comparison of the therapeutic effect of teriparatide with that of combined vertebraloplasty with antiresorptive agents for the treatment of new-onset adjacent vertebral compression fracture after percutaneous vertebroplasty. Osteoporos Int. 2012 May;23(5):1613-22. PMID: 21769661. File E, Deal C. Clinical update on teriparatide. Curr Rheumatol Rep. 2009 Jul;11(3):169-76. PMID: 19604460.	
T1673	Terlipressin Acetate	1 mg 5 mg
Gly-Gly-Gly-c[Gly-Tyr-Phe-Gln-Asn-Cys]-Pro-Lys-Gly-NH ₂	$C_{52}H_{74}N_{16}O_{15}S_2$ FW: 1227.37 [14636-12-5] $\geq 95\%$ Synthetic vasopressin analog and AVP-1 receptor agonist. It induces gastroparesis, induces vasoconstriction, and improves renal function in subjects with hepatorenal syndrome. Lange M, Van Aken H, Westphal M, et al. Role of vasopressinergic V1 receptor agonists in the treatment of perioperative catecholamine-refractory arterial hypotension. Best Pract Res Clin Anaesthesiol. 2008 Jun;22(2):369-81. PMID: 18683482. Betrosian AP, Agarwal B, Douzinas EE. Acute renal dysfunction in liver diseases. World J Gastroenterol. 2007 Nov 14;13(42):5552-9. PMID: 17948928.	

T1968 	Terpinen-4-ol NEW 5 g $C_{10}H_{18}O$ FW: 154.25 [562-74-3] ≥98% 25 g Found in various plant sources. It exhibits a wide variety of biological activities, including inducing autophagy, apoptosis, and cell death in leukemia cells and inhibiting growth of <i>Campylobacter</i>, <i>Aspergillus</i>, and <i>Fusarium</i>. Banjerdongchai R, Khaw-On P. Terpinen-4-ol Induces Autophagic and Apoptotic Cell Death in Human Leukemic HL-60 Cells. <i>Asian Pac J Cancer Prev</i>. 2013;14(12):7537-42. PMID: 24460330. Kurecki C, Padmanabha J, Bishop-Hurley SL, et al. Antimicrobial activity of essential oils and five terpenoid compounds against <i>Campylobacter jejuni</i> in pure and mixed culture experiments. <i>Int J Food Microbiol</i>. 2013 Sep 16;166(3):450-7. PMID: 24041998. Ninomiya K, Hayama K, Ishijima SA, et al. Suppression of inflammatory reactions by terpinen-4-ol, a main constituent of tea tree oil, in a murine model of oral candidiasis and its suppressive activity to cytokine production of macrophages in vitro. <i>Biol Pharm Bull</i>. 2013;36(5):838-44. PMID: 23649340.
T1677 	Tetracycline 10 g $C_{22}H_{24}N_2O_8$ FW: 444.43 [60-54-8] ≥90% 25 g Protein translation and mammalian RNA splicing inhibitor used to treat acne, rosacea, Lyme disease, and various bacterial infections. It may also inhibit MMPs. It also decreases the neurotoxicity of amyloid-β peptides. Kennedy R, Alibhai M, Shakib K. Tetracycline: a cure all? <i>Br J Oral Maxillofac Surg</i>. 2014 Apr;52(4):382-3. PMID: 24613100. Mahajan GB, Balachandran L. Antibacterial agents from <i>actinomycetes</i> - a review. <i>Front Biosci (Elite Ed)</i>. 2012 Jan 1;4:240-53. PMID: 22201868.
T1679 	Tetracycline Hydrochloride 1 g $C_{22}H_{24}N_2O_8 \cdot HCl$ FW: 480.9 [64-75-5] ≥96% 5 g Protein translation and mammalian RNA splicing inhibitor used to treat acne, rosacea, Lyme disease, and various bacterial infections. It may also inhibit MMPs. It also decreases the neurotoxicity of amyloid-β peptides. Kennedy R, Alibhai M, Shakib K. Tetracycline: a cure all? <i>Br J Oral Maxillofac Surg</i>. 2014 Apr;52(4):382-3. PMID: 24613100.
T1978 	Tetrahydroberberine NEW 1 mg $C_{20}H_{21}NO_4$ FW: 339.39 [522-97-4] ≥98% 5 mg 5-HT1A receptor agonist, dopamine D2 receptor antagonist, and ATP-sensitive K⁺ channel blocker found in <i>Corydalis</i>. It inhibits tissue factor pro-coagulant activity, suppresses platelet aggregation, decreases ventricular tachycardia and ventricular fibrillation, and increases gastric emptying. Ge HX, Zhang J, Chen L, et al. Chemical and microbial semi-synthesis of tetrahydroprotoberberines as inhibitors on tissue factor procoagulant activity. <i>Bioorg Med Chem</i>. 2013 Jan 1;21(1):62-9. PMID: 23199480. Lee TH, Kim KH, Lee SO, et al. Tetrahydroberberine, an isoquinoline alkaloid isolated from <i>corydalis</i> tuber, enhances gastrointestinal motor function. <i>J Pharmacol Exp Ther</i>. 2011 Sep;338(3):917-24. PMID: 21659472. Wu C, Yang K, Liu Q, et al. Tetrahydroberberine blocks ATP-sensitive potassium channels in dopamine neurons acutely-dissociated from rat substantia nigra pars compacta. <i>Neuropharmacology</i>. 2010 Dec;59(7-8):567-72. PMID: 20804776.
T1979 	Tetrahydrocoptisine NEW 1 mg $C_{19}H_{17}NO_4$ FW: 323.34 [4312-32-7] ≥98% 5 mg Stylopine AChE inhibitor found in <i>Corydalis</i>. It prevents LPS-induced increases in pro-inflammatory cytokines, suppresses formation of ethanol-induced gastric ulcers, and inhibits survival of <i>Strongyloides</i>. Li W, Huang H, Zhang Y, et al. Anti-inflammatory effect of tetrahydrocoptisine from <i>Corydalis impatiens</i> is a function of possible inhibition of TNF-α, IL-6 and NO production in lipopolysaccharide-stimulated peritoneal macrophages through inhibiting NF-κB activation and MAPK pathway. <i>Eur J Pharmacol</i>. 2013 Sep 5;715(1-3):62-71. PMID: 23810685. Li W, Huang H, Niu X, et al. Protective effect of tetrahydrocoptisine against ethanol-induced gastric ulcer in mice. <i>Toxicol Appl Pharmacol</i>. 2013 Oct 1;272(1):21-9. PMID: 23769714. Wangchuk P, Keller PA, Pyne SG, et al. Phytochemical and biological activity studies of the Bhutanese medicinal plant <i>Corydalis crissa</i>. <i>Nat Prod Commun</i>. 2012 May;7(5):575-80. PMID: 22799079.

T1776 	D-Tetrahydropalmatine $C_{21}H_{25}NO_4$ FW: 355.43 $\geq 98\%$ Dopamine D1 receptor antagonist and organic cation transporter 1 inhibitor found in <i>Corydalis</i> . It does not have affinity for dopamine D2 receptors. Tu M, Sun S, Wang K, et al. Organic cation transporter 1 mediates the uptake of monocrotaline and plays an important role in its hepatotoxicity. <i>Toxicology</i> . 2013 Sep 15;311(3):225-30. PMID: 23831208.
T1678 	D,L-Tetrahydropalmatine $C_{21}H_{25}NO_4$ FW: 355.43 [10097-84-4] $\geq 98\%$ Dopamine D1/2 receptor antagonist and potential L-type Ca^{2+} and K^+ channel blocker found in <i>Corydalis</i> and <i>Stephania</i> . It alters thresholds in pain assays, decreases measures of anxiety, and inhibits growth of <i>Plasmodium</i> . Baghdikian B, Mahiou-Leddet V, Bory S, et al. New antiplasmodial alkaloids from <i>Stephania</i> rotunda. <i>J Ethnopharmacol</i> . 2013 Jan 9;145(1):381-5. PMID: 23127648. Cao FL, Shang GW, Wang Y, et al. Antinociceptive effects of intragastric DL-tetrahydropalmatine on visceral and somatic persistent nociception and pain hypersensitivity in rats. <i>Pharmacol Biochem Behav</i> . 2011 Nov;100(1):199-204. PMID: 21889526.
T1676 	L-Tetrahydropalmatine (-)- <i>Corydalis</i> B $C_{21}H_{25}NO_4$ FW: 355.43 [483-14-7] $\geq 98\%$ Dopamine D1/2 receptor antagonist found in <i>Corydalis</i> and <i>Stephania</i> . It suppresses reward and reinforcement signaling in animal models of substance abuse, inhibits oxaliplatin-induced neuropathic pain, and suppresses depression- and anxiety-related behaviors. Lee B, Sur B, Yeom M, et al. L-tetrahydropalmatine ameliorates development of anxiety and depression-related symptoms induced by single prolonged stress in rats. <i>Biomol Ther (Seoul)</i> . 2014 May;22(3):213-22. PMID: 25009702. Guo Z, Man Y, Wang X, et al. Levo-tetrahydropalmatine attenuates oxaliplatin-induced mechanical hyperalgesia in mice. <i>Sci Rep</i> . 2014 Jan 28;4:3905. PMID: 24469566. Su HL, Zhu J, Chen YJ, et al. Roles of levo-tetrahydropalmatine in modulating methamphetamine reward behavior. <i>Physiol Behav</i> . 2013 Jun 13;118:195-200. PMID: 23711566.
T1777 	S,S-(+)-Tetrandrine $C_{38}H_{42}N_2O_6$ FW: 622.75 [518-34-3] $\geq 98\%$ Voltage-gated Ca^{2+} channel blocker found in <i>Stephania</i> . It displays many biological activities, including limiting mast cell degranulation, suppressing LPS-stimulated expression of inflammatory cytokines, inhibiting amyloid- β -induced memory and learning impairments, inducing cell cycle arrest and apoptosis in gallbladder carcinoma cells, and preventing Ebola virus infection in animal models. Sakurai Y, Kolokoltsov AA, Chen CC, et al. Two-pore channels control Ebola virus host cell entry and are drug targets for disease treatment. <i>Science</i> . 2015 Feb 27;347:995-998. Zhu R, Liu T, Tan Z, et al. Tetrandrine induces apoptosis in gallbladder carcinoma in vitro. <i>Int J Clin Pharmacol Ther</i> . 2014 Jul 30. [Epub ahead of print]. PMID: 25074868. Zhao H, Luo F, Li H, et al. Antinociceptive effect of tetrandrine on LPS-induced hyperalgesia via the inhibition of IKK β phosphorylation and the COX-2/PGE pathway in mice. <i>PLoS One</i> . 2014 Apr 10;9(4):e94586. PMID: 24722146.
T2402 	TG100-115 NEW $C_{18}H_{14}N_6O_2$ FW: 346.34 [677297-51-7] $\geq 98\%$ Inhibitor of p110 δ and p110 γ PI3K. It decreases pulmonary eosinophil levels, suppresses inflammation in COPD, and improves cardiac function by inhibiting edema and inflammation induced by VEGF and platelet activating factor. Doukas J, Eide L, Stebbins K, et al. Aerosolized phosphoinositide 3-kinase gamma/delta inhibitor TG100-115 [3-[2,4-diamino-6-(3-hydroxyphenyl)pteridin-7-yl]phenol] as a therapeutic candidate for asthma and chronic obstructive pulmonary disease. <i>J Pharmacol Exp Ther</i> . 2009 Mar;328(3):758-65. PMID: 19056934. Doukas J, Wrasidlo W, Noronha G, et al. Isoform-selective PI3K inhibitors as novel therapeutics for the treatment of acute myocardial infarction. <i>Biochem Soc Trans</i> . 2007 Apr;35(Pt 2):204-6. PMID: 17371238. Doukas J, Wrasidlo W, Noronha G, et al. Phosphoinositide 3-kinase gamma/delta inhibition limits infarct size after myocardial ischemia/reperfusion injury. <i>Proc Natl Acad Sci U S A</i> . 2006 Dec 26;103(52):19866-71. PMID: 17172449.

T2404 	TG101348 SAR302503; Fedratinib $C_{27}H_{36}N_4O_3S$ FW: 524.68 [936091-26-8] $\geq 98\%$ JAK2 inhibitor. It decreases expression of Th17 cells and increases expression of Treg cells in acute coronary syndrome models, inhibits proliferation of lymphoma cells, and lowers hematocrit and leukocyte count in models of myeloproliferative disease. Zheng Y, Wang Z, Deng L, et al. Modulation of STAT3 and STAT5 activity rectifies the imbalance of Th17 and Treg cells in patients with acute coronary syndrome. <i>Clin Immunol.</i> 2015 Jan 5;157(1):65-77. PMID: 25572535. Hao Y, Chapuy B, Monti S, et al. Selective JAK2 inhibition specifically decreases Hodgkin lymphoma and mediastinal large B-cell lymphoma growth in vitro and in vivo. <i>Clin Cancer Res.</i> 2014 May 15;20(10):2674-83. PMID: 24610827. Zhang M, Xu CR, Shamiyeh E, et al. A randomized, placebo-controlled study of the pharmacokinetics, pharmacodynamics, and tolerability of the oral JAK2 inhibitor fedratinib (SAR302503) in healthy volunteers. <i>J Clin Pharmacol.</i> 2014 Apr;54(4):415-21. PMID: 24165976.	NEW 5 mg 10 mg
T2668 	TGR5 Receptor Agonist $C_{18}H_{14}Cl_2N_2O_2$ FW: 361.22 [1197300-24-5] $\geq 98\%$ TGR5 agonist. It increases GLP-1 secretion and decreases glucose levels. Duan H, Ning M, Chen X, et al. Design, synthesis, and antidiabetic activity of 4-phenoxypyrimidine and 4-phenoxypyrimidine-5-carboxamide derivatives as potent and orally efficacious TGR5 agonists. <i>J Med Chem.</i> 2012 Dec 13;55(23):10475-89. T7033	Trifluoperazine Hydrochloride
Z3463	Ziprasidone

Anti-ulceratives, Antacids, Anti-emetics

Anti-ulceratives:

B1876	Betamethasone
B1878	Betamethasone 21-Phosphate Sodium
C0169	Carbenoxolone Disodium
C0278	Catechin
D1629	Dehydroepiandrosterone
D5994	Doxepin Hydrochloride
E4444	Ellagic Acid
G0145	Gallic Acid
G3457	Ginsenoside Re
L0109	Lactalbumin
L5769	Lorglumide Sodium
M1745	Melatonin
O4917	Omeprazole
P0245	Palmitine Chloride Hydrate
P2992	Phytic Acid, 40-50 wt% aqueous
R1774	Resiniferatoxin
R5894	Roxatidine Acetate Hydrochloride
S2957	Shogaol

Antacids:

C3250	Cimetidine
D1629	Dehydroepiandrosterone
E4408	Elcatonin Acetate
F0150	Famotidine
G0145	Gallic Acid
G3252	6-Gingerol
L0254	Lansoprazole
L5769	Lorglumide Sodium
N3496	Nizatidine
O4917	Omeprazole
P0245	Palmitine Chloride Hydrate
P0255	Pantoprazole
P0256	Pantoprazole Sodium
P2919	L-Phenylalaninol
P6954	Pioglitazone Hydrochloride
R0105	Rabeprazole Sodium
R0253	Ranitidine Hydrochloride
R5894	Roxatidine Acetate Hydrochloride
S8110	Sucralfate
T1754	Tenatoprazole
V3355	Vindoline

Anti-emetics:

A6368	Aprepitant
A7085	Arvanil
A9801	Azaperone
D5747	Dolasetron Mesylate Hydrate
G3253	8-Gingerol
G3254	10-Gingerol
G6802	Granisetron Hydrochloride
O5212	Ondansetron Hydrochloride Dihydrate
R1774	Resiniferatoxin
S2957	Shogaol

Antivirals

D0261	Dapivirine	N0068	Naringenin
D0375	Dasatinib Monohydrate	N3225	Nigericin Sodium
D1872	Des(benzylpyridyl) Atazanavir	N5550	Nomilin
D3212	2',3'-Dideoxycytidine	N5655	Nonoxynol-9
D3214	2',3'-Dideoxyinosine	N5669	Nordihydroguaiaretic Acid
D3322	Diffunisal	N7208	NSC-74859
D4802	17-Dimethylaminoethylamino-demethoxygeldanamycin	N7210	NSC-23766
D9752	Dynasore	O7218	Oseltamivir Phosphate
E2003	Efavirenz	P1202	PD325901
E4444	Ellagic Acid	P1754	Penciclovir
E4785	Elvitegravir	P2410	Phenethyl Dimethyl Caffate
E5178	Emtricitabine	P5712	Podophyllotoxin
E5220	Enfuvirtide (T-20)	P6857	Protocatechuic Acid
E5456	Enocitabine	P9870	Pyridostatin Trihydrochloride
		Q8016	Quercetin Dihydrate

Antivirals

R0247	Raltegravir
R1776	Resveratrol
R1780	Trans-Retinoic Acid
R3205	Ribavirin
R3249	Rimantadine Hydrochloride
R3577	Ritonavir
R5749	Romidepsin
S0033	Saikosaponin B2
S0133	Saikosaponin C
S3345	Silymarin
S5722	Sofosbuvir
S7061	SRPIN340
S7603	Stavudine
S8169	Suramin Hexasodium
T0091	7-(triethylsilyl)-10-deacetyl Baccatin III
T1844	Telbivudine
T1854	Tenofovir Monohydrate
T3097	Thymosin α -1 Acetate
T5720	Tofacitinib Citrate
T6930	Triclosan Methyl Ether
T6931	Triclosan
T8004	Tubeimoside I
T8145	Tulobuterol Hydrochloride
V0045	Valaciclovir Hydrochloride
V0160	Vapreotide
V0244	Valganciclovir Hydrochloride
V3212	Vidarabine
V3213	Vidarabine Monophosphate
V5734	Vorinostat
V9200	VX-950
Z0252	Zanamivir

Anxiolytics

A2658	Agomelatine	S5753	Somatostatin-28 (1-14)
A5217	Trans-Anethole	S7872	Stresscopin-Related Peptide, human
A5326	Aniracetam	T0081	Taurine
A7034	Aripiprazole	T1676	L-Tetrahydropalmitate
A7071	Atriopeptin II, rat/rabbit/mouse	T1678	D,L-Tetrahydropalmitate
B3345	(-)-Bilobalide	T2816	L-Theanine
B8248	Bumetanide	T6903	Tranlycypromine Hydrochloride
B8274	Buspirone Hydrochloride	T7003	Trazodone Hydrochloride
C0175	Carbetocin Acetate	T7033	Trifluoperazine Hydrochloride
C2947	Chlorpromazine Hydrochloride	T7036	Triptorelin
C2968	Chrysin	T7037	Triptorelin Acetate
C3246	Cilostazol	U6856	Urocortin II, human
C3477	Citalopram Hydrobromide	U6858	Urocortin II, mouse
C4457	Clomipramine Hydrochloride	U6859	Urocortin III, human
C4800	CM 346	U6860	Urocortin III, mouse
D5994	Doxepin Hydrochloride	V3444	Vilazodone
D8145	Duloxetine Hydrochloride	V5870	Vortioxetine
E7209	Escitalopram Oxalate	Z3463	Ziprasidone
F8270	Furosemide		
G0048	γ -Amino Butyric Acid		
G3354	Ginkgolide A		
G3457	Ginsenoside Re		
H5654	Honokiol		
H9717	Hydroxyzine Dihydrochloride		
J6400	(+)-JQ-1		
K0088	Kawain		
K0282	Kavalactones Mixture		
L0349	Lamotrigine		
L1784	Levetiracetam		
L9874	L-(+)-Lysine Monohydrate		
M0040	M40		
M0262	Maprotiline Hydrochloride		
M1708	Mecamylamine Hydrochloride		
M3368	Mirtazapine		
M5675	Motilin, dog		
M5776	Motilin, pig		
M7528	α -Melanocyte Stimulating Hormone		
N1982	Neuromedin U, rat		
N1983	Neuropeptide Y (3-36), human		
N1986	Neuropeptide Y, human/rat		
N1987	Neuropeptide Y (13-36), human		
N3310	Nicotinamide		
N7200	NS-11394		
O5212	Ondansetron Hydrochloride Dihydrate		
O9497	Oxytocin		
P7718	Pterostilbene		
P8117	Puerarin		
P8118	Puerarin		
R3347	Riluzole		
R8076	Rutin Hydrate		
S1855	Senktide Trifluoroacetate		
S1971	Sertraline Hydrochloride		
S3568	Siramesine		
S5745	[Tyr1]-Somatostatin		
S5747	[Tyr11]-Somatostatin		
S5749	Somatostatin-14		
S5750	Somatostatin-28		
S5751	Somatostatin-25		
S5752	Somatostatin-28 (1-12)		

Apoptosis Detection Products

A0825	Ac-GPK-pNA
A0826	Ac-GPK(Ac)-pNA
A0832	Ac-IEAR-pNA
A0834	Ac-IETD-pNA
A1084	Ac-VEID-pNA
A1097	Ac-YVAD-pNA
A4930	7-Amino-actinomycin D
A5353	Annexin V-FITC Apoptosis Detection Kit
B5608	Boc-FAAGRK-AMC
B5609	Boc-GRR-AMC
B5610	Boc-PRR-AMC
B5611	Boc-RRR-AMC
C0375	Ac-DEVD-pNA
C9781	Basic Cytotoxicity Test Assay Kit
C9782	Total Cytotoxicity Test Assay Kit
F0010	FAM FLICA [™] Poly Caspases Assay Kit
F0011	FAM FLICA [™] Caspase 1 Assay Kit
F0012	FAM FLICA [™] Caspase 2 Assay Kit
F0013	FAM FLICA [™] Caspases 3 and 7 Assay Kit
F0014	FAM FLICA [™] Caspase 6 Assay Kit
F0015	FAM FLICA [™] Caspase 8 Assay Kit
F0016	FAM FLICA [™] Caspase 9 Assay Kit
F0017	FAM FLICA [™] Caspase 10 Assay Kit
F0018	FAM FLICA [™] Caspase 13 Assay Kit
F0019	FAM-Phe-CMK Green FLISP [™] Assay Kit
F0019	FAM-Phe-CMK Green FLISP [™] Assay Kit
F0021	FAM-Leu-CMK Green FLISP [™] Assay Kit
F0021	FAM-Leu-CMK Green FLISP [™] Assay Kit
F0022	FAM-Spacer-Phe-CMK Green FLISP [™] Assay Kit
F0023	FAM-Spacer-Leu-CMK Green FLISP [™] Assay Kit
F0119	FAM-VAD-OPH I in vitro Apoptosis Detection Reagent
F0120	FAM-VAD-OPH II in vitro Apoptosis Detection Reagent
F0121	FAM-DEVD-OPH in vitro Apoptosis Detection Reagent
F4533	FLICA [™] 660 Poly Caspase Assay Kit
F4534	FLICA [™] 660 Caspase-1 Assay Kit
F4535	FLICA [™] 660 Caspase 3/7 Assay Kit
L1628	Ac-LEHD-pNA
M0115	Magic Red [™] Caspases 3 & 7 Assay Kit
M0116	Magic Red [™] Cathepsin B Assay Kit
M0117	Magic Red [™] Cathepsin K Assay Kit
M0118	Magic Red [™] Cathepsin L Assay Kit
M3378	MitoPT [™] JC-1 Assay kit
P6977	Pyr-GR-pNA
S7080	SR-FLICA Poly Caspases Assay Kit
S7081	SR FLICA Caspases 3 and 7 Assay Kit
S7082	SR FLICA Caspase 9 Assay Kit
S7083	SR-101-Phe-CMK Red FLISP [™] Assay Kit
S7084	SR-101-Leu-CMK Red FLISP [™] Assay Kit
S7184	SR-VAD-OPH in vitro Apoptosis Detection Reagent
T5677	Total Cell Death Assay Kit
Z1216	Z-DEVD-AMC
Z2268	Z-FR-AMC

Biologically Active Peptides

A0960	Adrenocorticotrophic Hormone (1-39), human	B5560	B-type Natriuretic Peptide (1-32), rat
A0961	Adrenocorticotrophic Hormone (1-39), rat	B5561	B-type Natriuretic Peptide (1-32), human
A0962	Adrenocorticotrophic Hormone (1-4)	B5608	Boc-FAAGRK-AMC
A0963	Adrenocorticotrophic Hormone (1-10), human	B5609	Boc-GRR-AMC
A0964	Adrenocorticotrophic Hormone (1-13), human	B5610	Boc-PRR-AMC
A0965	Adrenocorticotrophic Hormone (1-14)	B5611	Boc-RRR-AMC
A0966	Adrenocorticotrophic Hormone (1-16), human	B5648	Bombesin
A0967	Adrenocorticotrophic Hormone (1-17), human	B5649	[Tyr4]-Bombesin
A0968	Adrenocorticotrophic Hormone (1-24), human	B6812	Bradykinin Potentiator B
A0970	Adrenocorticotrophic Hormone (18-39), human	B6813	Bradykinin Potentiator C
A0971	Adrenocorticotrophic Hormone (4-10), human	B8010	Buccalin
A1097	Ac-YVAD-pNA	C0140	Calcitonin, eel
A1330	Adipokinetic Hormone	C0146	Calcitonin, chicken
A1331	Adipokinetic Hormone, locust	C0148	Calcitonin, human
A1332	Adipokinetic Hormone II (from <i>Locusta migratoria</i>)	C0149	Calcitonin, salmon
A1333	Adipokinetic Hormone II (from <i>Schistocera gregaria</i>)	C0151	α -Calcitonin Gene Related Peptide, human
A1368	Adrenomedullin (1-52), human	C0153	Calcitonin, rat
A1369	Adrenomedullin (13-52), human	C0243	Calcitonin Gene Related Peptide (8-37), human
A1370	Adrenomedullin (22-52), human	C0244	α -Calcitonin Gene Related Peptide, chicken
A1371	Adrenorphin	C0245	Calcitonin Gene Related Peptide, rat
A2412	AGDV	C0247	Calcineurin Autoinhibitory Peptide
A4369	A-K-R-R-R-L-S-S-L-R-A	C0248	Calcineurin Substrate
A4400	Alamethicin	C0249	Calcitonin Gene Related Peptide (8-37), rat
A4401	ALAL	C0250	Calcitonin Gene Related Peptide II, human
A4438	Allatostatin I	C0251	Calcitonin Gene Related Peptide II, rat
A4498	Alytesin	C0372	Casein Kinase 2 Assay Kit
A4844	Amylin (8-37), human	C0374	β -Casomorphin, human
A4845	Amylin (8-37), rat	C0375	Ac-DEVDP-pNA
A4846	Amylin, cat	C0379	Catch-Relaxing Peptide
A4847	Amylin, human	C0476	CB-TH
A4850	Amylin, rat	C1600	Carcinoembryonic Antigen (605-613)
A5070	Angiotensin Acetate	C1601	Carcinoembryonic Antigen Analog (605-613)
A5225	α -ANF (1-28), human	C1609	Cecropin B
A5272	Angiotensin, dog, rat	C1619	CEF3
A5273	Angiotensin Converting Enzyme Inhibitor Peptide	C1621	CEF4
A5287	Angiotensinogen (1-14), human	C1622	CEF6
A5458	Anorexigenic Peptide	C1623	CEF10
A5460	A-type Natriuretic Peptide (1-11), rat	C1868	Cerebellin
A5461	A-type Natriuretic Peptide (1-30), frog	C2468	β -Calcitonin Gene Related Peptide, human
A5476	Antagonist G	C2971	Chromostatin, cow
A5479	Antiestrogen Peptide	C4274	CKS-17
A6017	Apelin-13, human, cow	C5196	C-Myc Peptide
A6827	Argipressin Acetate	C5260	C-type Natriuretic Peptide (1-22), pig/human/rat
A7071	Atriopeptin II, rat/rabbit/mouse	C5646	Collagen Binding Fragment
A7072	Atriopeptin III	C5647	Colistin Sulphate
A7669	A-type Natriuretic Peptide (1-28), rat	C5768	Corazonin
A7670	Atriopeptin I	C5772	Corticotropin Releasing Factor, human/rat
A8071	Auriculin A	C5773	Cortistatin-14
A8077	Autocamtide 2	C6018	C-Peptide, dog
B0000	2B-(A)	C6019	C-Peptide, human
B0072	2B-(S)	C6982	Crustacean Cardioactive Peptide
B0108	Bactenecin	C7098	Crystalline
A0248	BAM-12P	C7618	C-Telopeptide
A0249	BAM-22P	C7997	C-type Natriuretic Peptide (1-22), human
B3324	Big Endothelin-1 (1-38), human	C7998	C-type Natriuretic Peptide, chicken
B3346	Brain Injury-derived Neurotrophic Peptide	D0025	DAMGO
		D0254	Dansyl-YVG
		D1643	Delta Sleep Inducing Peptide

Biologically Active Peptides

D1644	Deltorpin I	G2869	Ghrelin, rat
D1767	Dermenkephalin	G2870	Growth Hormone-Releasing Factor (1-44), human
D1768	Dermaseptin I	G2871	Growth Hormone-Releasing Factor, cow
D1769	Dermorphin	G2872	Growth Hormone-Releasing Factor, mouse
D1770	Dermorphin Analog	G2873	Growth Hormone-Releasing Factor, sheep
D1775	Deslorelin Acetate	G2874	Growth Hormone-Releasing Factor, rat
D3351	4-Dimethylaminopyridine	G2968	Growth Hormone-Releasing Peptide 2
E2424	Egg Laying Hormone (from <i>Aplysia</i>)	G4479	Glucagon (19-29), human
E2542	Met-Enkephalin, amide	G4480	Glucagon, human
E4408	Elcatonin Acetate	G4481	Glucagon-Like Peptide I amide (7-36), human
E4416	Eledoisin	G4482	Glucagon-Like Peptide I (7-37)
E4417	Eledoisin Related Peptide	G4483	Glucagon-Like Peptide II, human
E5210	Endomorphin-1	G4484	Glucagon-Like Peptide II, rat
E5211	Endomorphin-2	G4485	[Ala19]-Glucagon-Like Peptide II, rat
E5212	Endonuclease Antigenic Site	G6803	Granuliberin R
E5214	α -Endorphin	G6856	Growth Hormone Releasing Factor, human
E5215	Acetyl- α -Endorphin	G8103	Guanylin, human
E5216	β -Endorphin, camel	G8104	Guanylin, rat/mouse
E5217	β -Endorphin, human	H0207	Hepatitis B Viral Core Protein (128-140)
E5218	β -Endorphin, rat	H1643	Helodermin
E5219	Endothelin-1, human	H1644	Helodormin
E5220	Enfuvirtide (T-20)	H1645	Helospectin I
E5221	Endothelin-2, human	H1646	Helospectin II
E5222	Endothelin-3, human	H1648	Hemorphin-7
E5240	Leu-Enkephalin	H1657	Heparin-Binding Peptide
E5241	Met-Enkephalin	H1661	Hepatitis B Virus Core Protein (128-140)
E5276	Enterostatin, human	H1662	HER2/neu (654-662) GP2
E5277	Enterostatin, pig/rat	H1663	HER2/neu Fragment (869-877)
E6993	Erythromycin Resistance Peptide MRLFV	H2876	H-Trp-Gly-OH
E9416	Exendin-3	H2980	Humanin, human
E9417	Exendin-4	H3272	His Tag
E9418	Exendin 3 (9-39)	H3273	Histatin 5
F3204	Fibrinogen-binding Peptide	H3275	HIV Integrase Protein Inhibitor HCKFWW
F3205	Fibrinogen γ -chain Dodecapeptide	H3278	Human Immunodeficiency Virus
F3206	Fibrinolysis Inhibiting Factor	H8048	Reverse Transcriptase A2.1 peptide
F3207	Fibronectin CS-1 Peptide		Human Follicular Gonadotropin Releasing Peptide
F3208	Fibrinopeptide B, human	I5215	Indolicidin
F3209	Fibronectin-Binding Protein	I5476	Interleukin-6 Receptor Fragment
F4400	Flag Peptide	K0172	Kassinin
F4420	Boc-FLFLF	K0276	Katacalcin
F4856	Fmoc-Lys(Boc)-Leu-Lys(Boc)	K1674	Ketolide Resistance Peptide MRFFV
F4857	FMRF amide	K2412	KGDS
F4858	FMRF-like Peptide, snail	K6864	KRQHPG
F4859	FMRF	K9858	Kyotorphin
F5869	N-formyl-Met-Ala-Ser	L0248	Laminin Peptide YIGSR
F5870	N-formyl-Met-Leu-Phe	L0249	Laminin Peptide YIGSR-NH2
F5871	N-formyl-Met-Leu-Phe-Lys	L0250	Laminin Peptide SIKVAV
F5872	N-formyl-Nle-Leu-Phe-Nle-Tyr-Lys	L0251	Laminin Peptide CDPGYIGSR
G0000	G250.A2 Peptide	L1660	Leptin (22-56), human
G0146	Galanin, human	L1661	Leptin (116-130), mouse
G0147	Galanin, pig	L1735	Levitide
G0148	Galanin, rat	L1980	Leucokinin I
G0175	Gastric Inhibitory Peptide, human	L1981	Leucokinin VIII
G0178	Gastrin, chicken	L1983	Leucomyosuppressin
G0179	Gastrin-1, rat	L2876	Luteinizing Hormone Releasing Hormone III, Lamprey
G0180	Gastrin I, human	L3362	β -Lipotropin (61-64)
G0181	Gastrin Releasing Peptide, human		
G0182	Gastrin Releasing Peptide, pig		
G2868	Ghrelin, human		

Biologically Active Peptides

L3577	Litorin	O7209	Oscillagin A Methyl Ester
L8276	Luteinizing Hormone Releasing Hormone	O7210	Oscillagin B
L8277	[Gln8]-Luteinizing Hormone-Releasing Hormone, chicken	O7211	Oscillagin B Methyl Ester
L8278	Luteinizing Hormone-Releasing Hormone, salmon	O7212	Oscillagin C
L9875	Lys(Boc)-Leu-Lys(Boc)-Obzl	O7213	Oscillamide Y
L9880	Lysipressin Acetate	O9497	Oxytocin
M0124	Magainin 1	P0005	Pituitary Adenylate Cyclase-Activating Polypeptide (1-27), human/sheep/rat
M0126	Magainin 2	P0006	Pituitary Adenylate Cyclase-Activating Polypeptide (1-38), human/sheep/rat
M0144	Malantide	P0007	Pituitary Adenylate Cyclase-Activating Polypeptide (6-27), human/sheep/rat
M0172	Mastoparan	P0008	Pituitary Adenylate Cyclase-Activating Polypeptide (6-38), human/sheep/rat
M0173	Mastoparan X	P0009	Pituitary Adenylate Cyclase-Activating Polypeptide (1-38), frog
M0224	Melanoma Antigen Gene-Encoding Fragment 3 (271-279), human	P0010	Pituitary Adenylate Cyclase-Activating Polypeptide-Related Peptide, human
M0272	Mastoparan 7	P0011	Pituitary Adenylate Cyclase-Activating Polypeptide-Related Peptide, rat
M0273	Mastoparan 8	P0055	P55-TNFR peptide
M0276	Peptide 401	P0075	P75-TNFR peptide
M1646	Melanin Concentrating Hormone, human/mouse/rat	P0260	Papain Inhibitor
M1647	Melanin Concentrating Hormone, salmon	P0268	Parasin I
M1648	Melanostatin, frog	P0269	Parathyroid Hormone (1-34), cow
M1744	Melittin	P0270	Parthenolide
M1752	Men 10376	P0350	Pancreatic Polypeptide, chicken
M2460	Matrix GLa Protein - pNa	P0351	Pancreatic Polypeptide, rat
M3220	Tyr-W-MIF-1	P0352	Pancreastatin, pig
M5675	Motilin, dog	P0353	Pancreatic Polypeptide, human
M5776	Motilin, pig	P1760	Peptide T
M7528	α -Melanocyte Stimulating Hormone	P1762	Peptide YY, pig
M7529	β -Melanocyte Stimulating Hormone, human	P1763	Peptide YY, human
M7531	γ -1 Melanocyte Stimulating Hormone	P1764	Pep-1 Peptide
M7532	γ -3 Melanocyte Stimulating Hormone	P1766	Peptide B, cow
M9356	Myomodulin	P1767	Peptide F, cow
M9643	Myelin Basic Protein (1-11), human	P1768	Peptide YY (3-36), human
M9644	Myelin Basic Protein (87-99), guinea pig/human	P2445	GLa Peptide
M9646	Myelin Basic Protein (68-82), guinea pig	P2832	Peptide Histidine Isoleucine, pig
N0160	NAP Peptide	P2833	Peptide Histidine Isoleucine, rat
N1873	Nesiritide Acetate	P2859	Phosphate Acceptor Peptide
N1977	Neurokinin A (4-10)	P2992	Phyllolitorin
N1978	Neurokinin B	P2993	Phyllomedusin
N1979	Neuromedin	P2994	Physalaemin
N1980	Neuromedin B, pig	P4560	Proteolipid Protein (139-151)
N1981	Neuromedin C (18-27), pig	P6850	Prolactin-Releasing Peptide (1-31), human
N1983	Neuropeptide Y (3-36), human	P6859	Proctolin
N1984	Neuropeptide FF	P7034	Prion Peptide (106-126), human
N1985	Neuropeptide K, pig	P7628	Parathyroid Hormone-Related Protein (1-34), human/rat
N1986	Neuropeptide Y, human/rat	Q4370	QKRPSQRSKYL
N1987	Neuropeptide Y (13-36), human	R0250	Ranatensin
N1988	γ -Neuropeptide, rabbit	R0251	Ranatensin R
N5210	Nociceptin	R1752	Renin Inhibitor Peptide
N5211	Nocistatin	R2112	RFDS
N6020	Neuropeptide F	R2353	RF-NH2
N6076	N(p-Tosyl)-GPR-pNA	R2369	RFRP-1, human
O0977	Octopamine Hydrochloride	R2510	RGD-4C
O1078	Octreotide Acetate	R2511	RGDC
O6132	Opioid Receptor Antagonist Ac-RFMWMK-NH2		
O7116	Orexin B, human		
O7208	Oscillagin A		

Biologically Active Peptides

R2512	RGD	V1872	Vesicular Stomatitis Virus Peptide
R2516	RGES	V3360	Vasoactive Intestinal Peptide, guinea pig
R6873	RSR	W4096	WKYMVM-NH ₂
R8178	Rutaecarpine	X1752	Xenin
S0200	SAMs Peptide	Z6269	Z-Pro-D-Leu
S0381	Sauvagine		
S1060	Small Cardioactive Peptide A		
S1061	Small Cardioactive Peptide B		
S1343	Ac-SDKP		
S1604	Secretin Acetate		
S1605	Secretin, human		
S1606	Secretin, pig		
S1607	Secretin, rat		
S1969	Sermorelin Acetate		
S1970	Serum Thymic Factor		
S2044	SFLLR		
S5745	[Tyr1]-Somatostatin		
S5747	[Tyr11]-Somatostatin		
S5749	Somatostatin-14		
S5750	Somatostatin-28		
S5751	Somatostatin-25

Tofenamic Acid	465	Tyrphostin AG1517	54
Tolmetin Sodium	465	Tyrphostin AG490	475
Toltrazuril	465	Tyrphostin B42	475
Tolvaptan	466	U-72107A	378
Tomoxetine	84	U-9889	434
Tonka bean camphor	152	Ubenimex	476
Topotecan Hydrochloride	466	Ubenimex hydrochloride	97
Toremifene Base	466	UCN-1028c	120
Torkinib	384	UK-48340	65
Torseamide	466	Uniconazole	12, 476
Tosufloxacin Tosylate	466	Universal Tetanus Toxin Epitope P2 (830-844)	476
Total Cell Death Assay Kit	466	UP 256	93
Total Cytotoxicity Test Assay Kit	163	Uperolein	476
Toxin T4	18, 442	Uracil	476
Tozasertib	30, 467	Uralenic acid	243
TP-5	459	Urapidil	477
TP-5 Acetate	459	Urapidil Hydrochloride	477
TPA	375	Urocortin II, human	477
TPS-A	473	Urocortin II, mouse	477
Tracrium	85	Urocortin III, human	477
Trametinib	248	Urocortin III, mouse	477
Trandolapril	25, 467	Urocortin, human	478
Tranexamic Acid	467	Urocortin, rat	478
Tranilast	467	Urodilatin CCC	478
Trans-3,4',5'-Trimethoxy stilbene	467	Uroguanylin, human	478
trans-Anethole	71	Urotensin I	478
trans-p-Propenylanisole	71	Urotensin II, frog	478
trans-Retinoic Acid	404	Urotensin II, human	479
Transactivator of Transcription Peptide	468	Ursodeoxycholic Acid	479
Transactivator of Transcription Peptide (2-4)	468	Usmic Acid	479
Transient receptor potential vanilloid 1	481	Val2-cyclosporine	159
Tranlycypromine Hydrochloride	468	Valaciclovir hydrochloride	479
Trazinin	77	Valdecobix	27, 479
Trazodone Hydrochloride	468	n-Valeric Acid	480
Tremortin A	366	Valganciclovir Hydrochloride	480
Tretinoin	404	Valinomycin	480
9-cis-Tretinoin	16, 403	Valproic Acid Sodium Salt	23, 28, 480
S-Trityl-L-cysteine	472	Valsartan	25, 480
TRF	460	Vancomycin Hydrochloride	481
TRH	460	Vandetanib	481
Triacetyl Aloe-emodin (Impurity A)	468	Vanilloid Receptor 1 Fragment	481
Triacetyl Resveratrol	468	Vapreotide	481
Triacsin C	469	Vardenafil Dihydrochloride	482
Triadimefon	469	Vasoactive Intestinal Peptide	482
Triadimenol	469	Vasoactive Intestinal Peptide, guinea pig	482
Triamcinolone	469	[Lys8]-Vasopressin	481
Triamcinolone acetonide	469	Vasotec IV	194
Triamcinolone Acetonide Acetate	470	[Arg8]-Vasotocin	481
Tributylate	28, 373	Vatalanib Dihydrochloride	482
Trichostatin A	470	VE-821	482
Triclosan	470	Vecuronium Bromide	483
Triclosan Methyl Ether	470	Veliparib	32, 483
Triflumizole	12, 470	Vemurafenib	483
Triflumuron	471	Venlafaxine Hydrochloride	21, 483
Trifluoperazine Hydrochloride	471	VER-52296	345
Trifolitin	279	Verapamil Hydrochloride	483
4,2',4'-Trihydroxychalcone	272	Veratramine	483
4',5,7'-Trihydroxyflavanone	330	Verbascoside	484
3,4',5'-Trihydroxystilbene	403	Verruculogen	484
Trimebutine base	471	Versulin	76
Trimebutine Maleate	471	Verticine	365
Trimetazidine	471	Vesicular Stomatitis Virus Peptide	484
Trimethoprim	472	VGX-1027	17, 484
Trimethoxy resveratrol	467	Vidarabine	484
Triptolide	472	Vidarabine monophosphate	485
